MSCI World Small Cap ESG Screened Index (USD)

The MSCI World Small Cap ESG Screened Index is based on the MSCI World Small Cap Index, its parent index, and includes small-cap securities across 23 Developed Markets (DM)* countries. The index excludes companies from the parent index that are associated with controversial, civilian and nuclear weapons and tobacco, palm oil and arctic oil & gas or that derive revenues from thermal coal and oil sands extraction and that are not compliant with the United Nations Global Compact principles. The index also excludes companies that are involved in very severe controversies and/or in certain biodiversity-related controversies and targets a minimum 30% reduction in carbon emission intensity relative to the underlying parent index.

The MSCI World Small Cap ESG Screened Index was launched on Oct 08, 2020. Data prior to the launch date is back-tested test (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance -- whether actual or back-tested -- is no indication or guarantee of future performance.

MSCI FACTOR BOX AND FaCS FRAMEWORK (Please refer to complete description of the MSCI FaCS methodology here)

MSCI FaCS is a standard method for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.
