

MSCI Mexico Select Risk Weighted Index (MXN)

The MSCI Mexico Select Risk Weighted Index is based on a traditional market cap weighted parent index, the MSCI Mexico Index, which includes Mexican large and mid cap stocks excluding REITs. Constructed using a simple, but effective and transparent process, the MSCI Mexico Select Risk Weighted Index reweights each security of the parent index (excluding REITs) so that stocks with lower risk are given higher index weights. The index seeks to emphasize stocks with lower historical return variance and tends to have a bias towards lower size and lower risk stocks.

INDEX METHODOLOGY

Each MSCI Risk Weighted Index is constructed by reweighting the constituents of its market cap weighted parent index. To derive a risk weight for each security in the parent index, the security's 3-year weekly historical local return is calculated first. The risk weight is then computed as the ratio of the inverse of the security variance to the sum of the inverse of the security variances of all constituents in the parent index. The index also follows the MSCI 35/65 methodology, which constrains the weight of the largest constituent at 35%, and the sum of the weights of the largest five securities at 65%, with a buffer of 5% applied on these limits at each index review. The Index is rebalanced on a semi-annual basis, coinciding with the Semi-Annual Index Reviews of the MSCI Global Investable Market Indexes (GIMI). In addition, the index is rebalanced as needed to maintain the 35/65 constraints on any given day.
