Swipe to invest: the story behind millennials and ESG investing

MSCI ESG Research LLC

March 2020
**Millennials and ESG**

In recent years, adoption of environmental, social and governance (ESG) investing has accelerated in part due to momentum from key industry organizations such as the Principles for Responsible Investment (PRI), availability of better ESG data and tools, and demand from the next generation of investors known as millennials. According to analysis by the Pew Research Center, millennials are defined as those born between 1981 and 1996. With ages between 24 and 39 in 2020, members of this generation have entered their prime earning years.

A 2018 survey indicated that 87% of high net worth (HNW) millennials considered a company’s ESG track record an important consideration in their decision about whether to invest in it or not, while another found that 90% of millennials wanted to tailor their investments to their values.

---

Q: What is ESG investing?
A: ESG Investing – a term that is often used synonymously with sustainable investing, socially responsible investing (SRI) or mission-related investing – can be defined as the consideration of ESG factors alongside performance factors in the investment decision-making process.

---

A 2019 Morgan Stanley Institute for Sustainable Investing survey of high net worth investors found that 95% of millennials were interested in sustainable investing.

The collection of studies referenced here and linked at the end of this paper suggested that millennials, as well as women and, increasingly, individual investors of all ages and genders, are interested in directing their investments toward companies with good ESG records. This reflects a desire for their money not just to earn a return but to align with their personal values and contribute to the social good. The research suggested these investors are asking more questions of their wealth managers and are scrutinizing their investments to understand what they own and how it impacts society and the planet at large.

---

**Why millennials matter**

Millennials are a large demographic representing 79.4 million people in the U.S. alone, and immigration could lead to an increase in this number to 81 million by 2036. This group is also poised to inherit a significant amount of wealth.

---

2. US Trusts’ Insights on Wealth and Worth 2018
5. Chiavarone, S. “This is how millennials are shaping the new economy.” CNBC, Sept. 2, 2019.
“We’re in the middle of a $30 trillion intergenerational wealth transfer from baby boomers to their children,” says Dave Nadig of ETF.com. “And those kids—not really millennials only, but people from 25 to 40 years old—simply think about their investment decisions differently.”

“Demand for sustainable investments is being driven, in part, by millennials who prefer to invest in alignment with personal values,” said a 2019 report by Julian Seelan, the sustainable investing lead for wealth and asset management clients at Ernst & Young. Firms typically lose 70% to 80% of assets when transferred from one generation to the next. 6 “Consequently, the wealth and asset managers who supply millennials [with] ESG investment options will be strongly positioned to attract new assets to the firm as well as retain beneficiary millennial clients.”

Interest in sustainable investing among the general population of investors jumped from 71% in 2015 to 85% in 2019, and in millennial investors from 84% in 2015 to 95% in 2019, according to Morgan Stanley Institute for Sustainable Investing. 7 In years past, women were more likely than their male counterparts to factor sustainability into investment decisions, and see the benefits of doing so. However, Morgan Stanley indicated this difference in interest dropped from 17 percentage points in 2017 to three in 2019. 7

According to Pew Research Center analysis8 of new census data,9 in 2017, households headed by a millennial earned more than young adult households did at any time in the past 50 years. Pew reported that this growth could be partially attributed to millennial women, who are working more and being paid more than similarly aged women in previous years.

Wealth managers are preparing for this new generation of investors. 43% of the affluent millennials who responded to a 2019 Investopedia Affluent Millennial Investing Survey said they use a financial advisor. Those surveyed said they trust financial advisors more than they trust TV shows, books, newspapers, podcasts, websites, magazines, or online video content.10 More than any other generation of

investors, millennials have also been flocking to robo advisors (though only 20% of affluent millennials Investopedia surveyed currently used them and a Charles Schwab report found that even among millennials, 79% would want their robo advisor to augment their offerings with access to human advice). Ellevest, Motif, Merrill Edge, and other robo advisors offer ESG portfolios to help attract and retain their clients.

The interest from millennial investors and HNW millennials in particular has already helped drive the rapid growth in ESG investment. In a 2018 U.S. Trust Wealth and Worth survey, Bank of America Merrill Lynch said that they could “conservatively estimate” USD 20 trillion of assets growth in U.S.-domiciled ESG funds over the next two decades, equivalent to the value of the S&P 500 today. Overall, sustainable investing in the US has experienced a compound annual growth rate of 13.6 percent since 1995 and increased assets under management from $639 billion to $12.0 trillion in 2018.

Nearly USD 4 billion flowed into ESG funds in the first three quarters of 2019. The year-end total in 2018 was USD 5.5 billion, which at the time was a calendar-year record, but sustainable funds were on track to triple that during the waning months of 2019.

How wealth managers are responding

“The No. 1 question I get from advisors is how to handle the coming generational wealth transfer,” said ETF.com’s Dave Nadig, “ESG has emerged as one of the dominant answers to that question.”\(^{15}\)

Wealth managers subscribe to MSCI ESG Research for various reasons. Through these relationships we have observed that wealth managers are building out ESG capabilities in five key areas in response to the growing demand for ESG investing options:

- **Screening on managed accounts**
  Wealth managers may offer negative screening through separately managed accounts (SMAs). Negative screening refers to the exclusion of stocks from a portfolio. We have observed a range of criteria being used to screen SMAs, including traditional socially responsible investing (SRI) screens like alcohol, tobacco, and weapons as well as faith-based screens for Catholic or Islamic investors. Business ethics screens including involvement in issues like child labor and animal testing have also been popular. In recent years, we have also seen screening on emerging issues like fossil fuel involvement, nuclear power, and for-profit prisons.

- **Due diligence and manager research**
  Due diligence and manager research teams have been leveraging ESG data to better understand the ESG characteristics of managed products and funds. We see due diligence integrating ESG into fund research and selection to complement their efforts to understand manager capabilities and processes. ESG reporting and data may help align what managers say they are doing with ESG outcomes. For example, where a manager says they are building a portfolio designed to minimize exposure to climate change risk, due diligence and research teams may

\(^{15}\) Dave Nadig, CEO of ETF.com, Quote in "MSCI ESG Fund Metrics Launches on Leading Market Data Platforms" [https://www.msci.com/documents/10199/43bb7b79-f281-4727-b194-19b91460e1a0](https://www.msci.com/documents/10199/43bb7b79-f281-4727-b194-19b91460e1a0)
leverage ESG reporting to measure the carbon footprint and performance on climate change risk management of a portfolio and compare it to a benchmark.

**Portfolio construction and management**
We observe that wealth managers are integrating ESG factors into portfolio construction and management. While some wealth managers convert a portion of their client’s portfolio allocation to an ESG or impact strategy, increasingly we’ve seen wealth managers seek to build portfolios based on a strategy that is entirely ESG. A number of model ESG portfolios launched by wealth managers integrate ESG across the total portfolio, often in the form of a multi-manager model.

**Reporting and transparency**
We observe that retail investors are increasingly asking for more transparency on the ESG characteristics of their investments, wanting to “know what they own”. Not only are individuals asking their wealth managers to consider ESG in their portfolio, they also want to understand the benefits of doing so. Reporting may provide wealth managers with the ESG data to respond to client queries and also to help point out things that may not be obvious or that are unknown to investors, e.g. “You have limited exposure to companies with significant environmental controversies compared to a benchmark”. MSCI is increasingly supporting wealth managers who are providing transparency into the ESG characteristics of client portfolios, individual companies and funds.

**Marketing and education**
We observe wealth managers increasingly place emphasis on education and marketing to both internal and external stakeholders. Internal education on ESG may be fundamental to helping their advisors engage with the next generation of millennial investors. External education and marketing on ESG can be an opportunity to deepen client relationships, to increase client retention and to attract new assets.

At MSCI ESG Research we provide wealth managers with content and tools designed to support their education and marketing efforts, including introductory content to help investors learn about what ESG is and reporting capabilities that allow managers to market the ESG characteristics of their portfolios.
Highlights from the studies

**USD 30 trillion**
- wealth transfer from baby boomers to 75 million millennials to take place over the next few decades.\(^{16}\)

**88%**
- of high-net worth millennials are actively reviewing the ESG impact of their investment holdings.\(^{17}\)

**89%**
- of millennials expect their financial professional to do a deep dive into a company’s ESG factors and history with ESG issues before recommending an investment opportunity.\(^{18}\)

**2X**
- of millennial investors have intentionally stopped investing or declined to invest in a company because of the impact that company’s products or services have on people’s health and well being.\(^{19}\)

**95%**
- of millennial investors were interested in sustainable investing as of 2019 up 9 percentage points from 2017.\(^{20}\)

**85%**
- of individual investors were interested in sustainable investing as of 2019 up 10 percentage points from 2017.\(^{21}\)

Appendix: Defining ESG

Incorporating ESG considerations in the investment process has been referred to in many ways, including sustainable investing, socially responsible investing, mission-related investing and impact investing. MSCI groups the various names and practices into three common approaches that investors have used to achieve distinct ESG objectives: values-based investing, impact investing and ESG integration.

**Values-based investing** aims to align investments with an organization’s or individual’s ethical values by expressing preferences for what industries and companies they invest in. These preferences may take the form of values-driven exclusions, whereby these investors avoid companies involved in business activities that conflict with their ethical, religious, environmental, social or other values-based convictions. Values-driven exclusions are not implemented for financial reasons.

**Impact investing** targets investments to generate positive social or environmental impacts in line with the investor’s views or mission. These strategies sometimes put the positive impact at par or ahead of financial returns and, therefore, may not seek to provide superior risk-adjusted returns.

**ESG integration** aims to assess long-term financial risks and opportunities related to ESG issues as a core component of building a resilient and sustainable portfolio for the specific purpose of enhancing long-term risk-adjusted returns.

Although these three approaches have distinct objectives, they are not mutually exclusive, and investors may blend elements of each approach.
ABOUT MSCI ESG RESEARCH LLC

MSCI ESG Research products and services are provided by MSCI ESG Research LLC, and are designed to provide in-depth research, ratings and analysis of environmental, social and governance-related business practices to companies worldwide. ESG ratings, data and analysis from MSCI ESG Research LLC are also used in the construction of the MSCI ESG Indexes. MSCI ESG Research LLC is a Registered Investment Adviser under the Investment Advisers Act of 1940 and a subsidiary of MSCI Inc.

ABOUT MSCI

MSCI is a leader provider of critical decision support tools and services for the global investment community. With over 45 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process.

The foregoing shall not exclude or limit any liability that may not by applicable law be excluded or limited, including without limitation (as applicable), any liability for death or personal injury to the extent that such injury results from the negligence or willful default of itself, its servants, agents or sub-contractors.

Information containing any historical information, data or analysis should not be taken as an indication or guarantee of any future performance, analysis, forecast or prediction. Past performance does not guarantee future results.

The Information should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. All Information is impersonal and not tailored to the needs of any person, entity or group of persons.

None of the information constitutes an offer to sell (or a solicitation of an offer to buy), any security, financial product or other investment vehicle or any trading strategy. It is not possible to invest directly in an index. Exposure to an asset class or trading strategy or other category represented by an index is only available through third party investable instruments (if any) based on that index. MSCI does not issue, sponsor, endorse, market, offer, review or otherwise express any opinion regarding any fund, ETF, derivative or other security, investment, financial product or trading strategy that is based on, linked to or seeks to provide an investment return related to the performance of any MSCI index (collectively, "Index Linked Investments"). MSCI makes no assurance that any Index Linked Investments will accurately track index performance or provide positive investment returns. MSCI Inc. is not an investment adviser or fiduciary and MSCI makes no representation regarding the advisability of investing in any Index Linked Investments.

Index returns do not represent the results of actual trading of investible assets/securities. MSCI maintains and calculates indexes, but does not manage actual assets. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the index or Index Linked Investments. The imposition of these fees and charges would cause the performance of an Index Linked Investment to be different than the MSCI index performance.

The Information may contain back tested data. Back tested performance is not actual performance, but is hypothetical. There are frequently material differences between back tested performance results and actual results subsequently achieved by any investment strategy.

Constituents of MSCI equity indexes are listed companies, which are included in or excluded from the indexes according to the application of the relevant index methodologies. Accordingly, constituents in MSCI equity indexes may include MSCI Inc., clients of MSCI or suppliers to MSCI. Inclusion of a security within an MSCI index is not a recommendation by MSCI to buy, sell, or hold such security, nor is it considered to be investment advice.

Data and information produced by various affiliates of MSCI Inc., including MSCI ESG Research LLC and Barra LLC, may be used in calculating certain MSCI indexes. More information can be found in the relevant index methodologies on www.msci.com.

MSCI ESG Research LLC is a Registered Investment Adviser under the Investment Advisers Act of 1940 and a subsidiary of MSCI Inc.
