

MSCI USA SELECT VALUE MOMENTUM BLEND INDEX (USD)

The MSCI USA Select Value Momentum Blend Index is based on MSCI USA Index, its parent index, which includes large and mid-cap stocks in the US equity market. The index is designed to represent the performance of a strategy that seeks higher exposure to value and momentum factors within the parent index while also maintaining moderate Index turnover and lower realized volatility than traditional cap weighted indexes.

The MSCI USA Select Value Momentum Blend Index was launched on Jul 25, 2017. Data prior to the launch date is back-tested data (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance -- whether actual or back-tested -- is no indication or guarantee of future performance.

INDEX METHODOLOGY

The MSCI Select Value Momentum Blend Indexes are designed to represent the performance of a strategy that seeks higher exposure to value and momentum factors within the parent index. The Value-Momentum Z-Score is computed for each security by combining the Value and Momentum Z-scores computed within each sector. The indexes are constructed by including a set proportion of securities from the parent index with the highest Value-Momentum Z-Scores. The constituents are weighted such that securities with lower realized volatility are given higher Index weights. These index construction rules are used to calculate two separate semi-annually rebalanced underlying Indexes (Underlying Index 1 having rebalance dates usually as of the close of the last business day of May and November and Underlying Index 2 having corresponding dates usually as of the close of the last business day of February and August). The final weights are computed on a quarterly basis by combining the weights of the securities in the two underlying Indexes in equal proportion. This approach is designed to allow for more frequent constituent selection and re-weighting compared to either of the underlying Indexes and turnover lower than that of an underlying index with quarterly rebalancing frequency. The weights computed above may be capped depending on the size of the active weights at the sub-regional level.

ABOUT MSCI

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 45 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process. To learn more, please visit www.msci.com.
