

# MSCI EAFE Risk Weighted Top 175 Index Hedged to CAD (CAD)

The MSCI EAFE Risk Weighted Top 175 Index Hedged to CAD is based the MSCI EAFE Index, its parent index, which includes large- and mid-capitalization stocks across 21 Developed Markets (DM). Constructed using a simple, but effective and transparent process, each security of the parent index is reweighted so that stocks with lower risk are given higher index weights. The final constituents of the Index are determined by ranking these security level risk weights and taking the top 175 subset securities. The Index seeks to emphasize stocks with lower historical return variance and tends to have a bias towards lower size and lower risk stocks. Historically, the Index has exhibited lower realized volatility in comparison to its parent index, while maintaining reasonable liquidity and capacity. The index is 100% hedged to the Canadian dollar by notionally “selling” each foreign currency forward at the one-month Forward exchange rate.
