

MSCI Emerging Markets Equal Weighted Index (EUR)

The MSCI Emerging Markets (EM) Equal Weighted Index represents an alternative weighting scheme to its market cap weighted parent index, the MSCI Emerging Markets Index. The index includes the same constituents as its parent (large and mid cap securities from 26 EM countries*). However, at each quarterly rebalance date, all index constituents are weighted equally, effectively removing the influence of each constituent's current price (high or low). Between rebalances, index constituent weightings will fluctuate due to price performance.

CUMULATIVE INDEX PERFORMANCE – NET RETURNS (EUR) (FEB 2005 – FEB 2020)

ANNUAL PERFORMANCE (%)

| Year | MSCI EM Equal Weighted | MSCI Emerging Markets |
|------|------------------------|-----------------------|
| 2019 | 17.57 | 20.60 |
| 2018 | -13.26 | -10.26 |

* EM countries include: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Russia, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey and United Arab Emirates.

The MSCI Emerging Markets Equal Weighted Index was launched on Jan 22, 2008. Data prior to the launch date is back-tested data (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance – whether actual or back-tested – is no indication or guarantee of future performance.

INDEX METHODOLOGY

Each MSCI Equal Weighted Index includes the same constituents as its market cap weighted parent index and is rebalanced in February, May, August and November, coinciding with the quarterly and semiannual index reviews of its parent. Corporate events are also generally reflected simultaneously in both the equal weighted index and its parent. However, at each quarterly rebalance date, all equal weighted index constituents are weighted equally. This tends to give greater exposure to smaller cap index constituents versus the parent index where larger cap constituents have a more dominant impact on index valuations.

FACTOR BOX AND FaCS METHODOLOGY

MSCI FaCS is a standard method ([MSCI FaCS Methodology](#)) for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.

ABOUT MSCI

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 45 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process. To learn more, please visit www.msci.com.
