

MSCI Private Capital Benchmarks Summary

Q4 2024

Contents

Introduction

For much of the past decade, private markets have experienced extraordinary growth. Capital flowed with ease, strategies scaled and managers and investors alike benefited from an expansionary tide. However, the post-2021 environment has introduced a more complex and demanding investment environment: Higher costs of capital, prolonged exit timelines and capital formation challenges have reshaped the terrain.

The private markets are evolving and, though not always evenly, the asset class has experienced sustained interest and growth, effectively transforming the global investment landscape.

As private assets expand – accounting for an ever-greater share of institutional portfolios and attracting a new universe of private-wealth investors — the challenge of measuring performance precisely has never been more critical, especially in context of rising volatility and geopolitical tension. With more capital at stake and more stakeholders involved, the

need for accurate, representative and forward-looking performance-measurement tools is paramount. Traditional benchmarks tied to public markets are no longer sufficient. As private investments scale in size and complexity, they require benchmarks that reflect their distinct return profiles, risk dynamics and liquidity characteristics.

Our aim is to provide a benchmarking report that delivers the data to help make sense of the current landscape and put your investment metrics into context. Built on one of the most robust and reliable datasets in private markets, it delivers standardized, actionable insights to support your decision-making — whether you're allocating capital, evaluating managers or positioning your strategy in a crowded market.

For limited partners, clarity and comparability are essential for informed portfolio construction and manager selection. For general partners, benchmarking isn't just about measurement, it's about market positioning,

transparency and trust. In a challenging fundraising environment, robust, data-backed performance information offers a critical differentiator.

No matter where you sit in the private-market ecosystem, we hope this report helps you meet today's challenges — and unique opportunities — with greater confidence and conviction.

Head of Private Assets
MSCI

Key Takeaways

Buyout

- Despite a positive 2024 that delivered calendar-year returns of 5.5%, buyout strategies showed signs of slowing. Overall, 2024 returns were weaker than those in 2023 (9.7%) and performance faded further in Q4 relative to the quarter prior.
- While that 5.5% sat towards the middle of the pack among other private-asset strategies, the longer-term view reveals a bounceback after a miserable 2022 when the annual return was -1.4%. Plus, buyout's cumulative returns over the past five years have now comfortably eclipsed all other private-asset strategies.
- Buyout's middling performance warrants context as well. Dispersion between the top and bottom performing private-asset classes is the lowest we've observed in the past 10 years.

Private credit

- Private-credit funds outperformed private-equity strategies for the third consecutive year in 2024, driven by the continued pass-through of elevated interest rates to lenders.
- Within the asset class, senior, mezzanine and distressed debt funds performed within a narrow band of returns between roughly 5-9% — a shade lower than 2023.
- Though fundraising has slowed across private markets, dry powder levels for private credit held relatively steady over 2024. Investors will be watching closely as capital deployment and fundraising dynamics adjust to the evolving rate environment.

Venture capital

- Venture-capital funds outpaced buyout in Q4 2024 with a 2.3% return, reflecting a modest recovery in late-stage valuations, which suffered in 2022 and into 2023. This recovery comes even as exit markets remain largely frozen, with distribution activity still muted.
- While cumulative returns for venture capital have plateaued in recent years, the Q4 uptick provides a glimmer of positive momentum for a segment that has seesawed in recent years.

Real assets

- Real-estate portfolios remain under pressure, posting negative returns in Q4 2024 and continuing a trend of soft performance since mid-2022.
- Market participants will be looking to see if the comparative weakness of real assets persists amid new market headwinds: based on year-end fund compositions, evolving trade policies may present less impact to private real estate and infrastructure, for example, than other strategies.

Challenges to a private markets recovery persisted throughout 2024:

- Fundraising slowed in total across all strategies, distribution rates hovered at decade lows and real assets struggled under continued down-market pressure.
- Tariff-related risks have introduced new complexity, and investors will need to sharpen their understanding of their portfolios — and their underlying exposures — to navigate uncertainty.

Our Dataset

The insights in this report are grounded in the cash flows and valuations of hundreds of limited partners (LPs) who use MSCI to help manage their private-capital portfolios.

Trusted sourcing and rigorous validation

Impartial and representative, our data is 100% LP-sourced and undergoes a thorough cross-validation by MSCI's research teams before being added to our database.

Entirely from inception

Each of the 14,000+ funds in our dataset includes the complete cash flow and valuation history.

Focused exclusively on private markets

We include only closed-end, drawdown-style funds where managers control the timing of capital movements. For consistency, hedge funds, open-ended vehicles, directs and co-investments are excluded, and all returns are net of fees.

Refreshed quarterly

In accordance with industry-standard reporting lags, the dataset is updated quarterly to capture over 70% of reported fund valuations, ensuring the benchmarks reflect the latest picture.

A commitment to rigorous classification

We apply MSCI's Private Capital Classification System (PCCS), a rules-based framework designed to add clarity, comparability and consistency.

Globalized for accuracy

All amounts are converted using daily spot exchange rates to provide precise pooled currency benchmarks.

FUND BENCHMARKS

Private markets struggled to keep pace in 2024

- While most private-market strategies posted positive calendar-year returns, many remained well below public-market benchmarks. Globally, private-equity fund returns came in roughly 11 percentage points lower than the MSCI ACWI Investible Market Index (IMI), while private-infrastructure funds ended the year about nine points lower than their public equivalents.
- Comparing private strategies, credit funds again outperformed equity for the third consecutive year, supported by elevated interest rates. Notably, venture capital outpaced buyout in Q4 2024, a quarterly rarity since 2022.

FUND BENCHMARKS

Buyout's dominance persists

- Cumulative returns for buyout funds continued to climb, suggesting that, while exits remain limited across strategies, conditions appear to be recovering from the slowdown seen around 2022.
- Buyout's trajectory stands in contrast to other parts of the market. Venture capital, once the poster child of growth, has plateaued with cumulative returns flat for the past two years amid persistent challenges in monetizing older positions.

Cumulative Index Returns

A catalog of the MSCI Private Capital Closed-End Fund Indexes is available on the MSCI website.

FUND BENCHMARKS

Equity swings, credit steadies

- Calendar year IRRs for 2024 reinforced a pattern we've seen since the 2022 bear market: Credit strategies — particularly mezzanine funds — have consistently outperformed. Conversely, equity fund returns, which tend to show greater performance variability, have remained lower of late.
- Notably, dispersion between the top and bottom performing asset class has tightened. In fact, the 10-percentage-point gap is the smallest we've observed in the past decade.
- Will compressed dispersion across private-asset strategies persist or widen again as macro-volatility surfaces?

Global Private Capital Performance by Calendar Year

ASSET AND HOLDING METRICS

Growth in buyout finds its level

- In the post-COVID 19 environment, not only did relative growth rates rise, but so did dispersions — there were meaningful winners and comparative losers.
- Since then, we've seen rapid and broad mean-reversion. Revenue and EBITDA growth metrics for buyout-backed companies have returned to long-run averages and the narrowing of dispersion across companies suggests a more uniform and stable (if less spectacular) market.

Historical Buyout Revenue and EBITDA Growth

ASSET AND HOLDING METRICS

Which strategies are defended from tariffs?

- Our recent analysis of revenue exposures to tariffs reveals which strategies may — or may not — be defensively allocated.
- We found that revenues for health care equipment and services, consumer staples, financial services and energy investments are among the most at risk in the U.S. This suggests that private-credit and equity strategies are comparatively exposed. Conversely, real estate was the least at-risk sector, a relative bright spot for an industry attempting to recover from difficult post-pandemic conditions.

Global Valuation Breakdown by Industry

Data as of Q4 2024

CAPITAL FLOWS

Net cash flows nearly break even

- Net cash flows across private capital inched closer to breakeven in 2024, a positive signal after six consecutive years of slow distributions.
- Tempering the optimism though, distribution rates remain stuck at decade lows, matching 2023 levels. This tension between slightly improved net flow and persistently weak distributions underscores the tight liquidity environment facing investors.
- As dry powder levels decline and economic risks rise, will LPs demonstrate caution, slowing the pace of deal activity instead of fueling competition?

Global Private Capital Cash Flows by Calendar Year (USD bn)

CAPITAL FLOWS

A possible turning point in deal activity

- Capital dynamics are shifting across private markets. The multi-year climb of dry powder has peaked and begun to reverse course.
- After three years of slow and steady decline, dry powder as a percentage of capitalization dipped to decade lows (20.7%) by the end of 2024. These results may signal a modest pickup in capital calls and deployment, given fundraising remains subdued. If sustained, this could be an early signal that deal activity is thawing.

Dry Powder by Asset Class

Notes and calculations

Fund Benchmarks and Capital Flows

- Vintage is assigned based on the year of the initial cash flow date of the fund.
- Pooled results are calculated using the composite transaction (cash flow and valuation) activity of the underlying funds.
- Returns for periods of less than one year are not annualized.
- Valuation for fund-level figures represents the Limited Partners' share of the fund's net asset value (value of all assets - value of all liabilities).
- Distribution-to-Contribution Ratio is calculated as Period Distributions / Period Contributions.
- Contribution Rate is calculated as Period Contributions / (Starting Dry Powder + Capitalization of Newly raised Funds), and is annualized.
- Distribution Rate is calculated as Period Distributions / Previous Valuation, and is annualized.
- Net Cash Flow is calculated as Contributions - Distributions.
- Dry Powder is calculated as Capitalization - Cumulative Contributions for all active funds.

Asset and Holding Metrics

- Valuation for holdings level figures represents the fund's investment in a given entity and is gross of any carried interest allocation.
- Entry and exit data will default to specifically designated metrics disclosed within financial reporting. If none are available, data from two quarters after or one quarter before the event in question is used.
- Revenue and EBITDA growth rates are calculated using figures as reported by managers within financial reporting. We make no adjustments for companies that underwent corporate actions or other material events between reporting periods.
- Revenue and EBITDA Growth rates are calculated from companies that have a 12-month revenue and/or 12-month EBITDA available at both the end date (e.g., 2024-09-30) and one year prior to the end date (e.g., 2023-09-30). Negative EBITDA figures are excluded. Revenue and EBITDA Growth rates lower than -100% and higher than 1000% are excluded from both calculations.
- EBITDA Multiples are calculated as Total Enterprise Value / 12-month EBITDA. Net Debt Multiples are calculated as Net Debt / 12-month EBITDA. Multiples lower than 0x and higher than 100x have been excluded from both calculations.
- TVPI (MOIC) is calculated as (Valuation + Proceeds) / Total Invested.
- % Realized is calculated as the percentage of holdings which have been fully exited through a sale, repayment, write off/shutdown, or any other realization event. Holdings in escrow are considered to be fully exited.
- Loss Ratio is calculated as the number of holdings with TVPI <1 divided by the total number of holdings.
- Capital Weighted Loss Ratio is calculated as the Total Invested of holdings with TVPI <1 divided by the Total Invested of all holdings.

Climate and Sustainability Benchmarks

- Carbon intensity data includes both reported and estimated emissions data. Carbon estimates and other figures are provided in alignment with PCAF standards.
- Carbon estimates are sourced from MSCI ESG Research and are available for companies only; therefore, properties, infrastructure assets, and other investments are excluded from this analysis.
- Carbon figures represent the aggregate carbon intensity of the funds' underlying investments. Figures are calculated as a valuation-weighted sum with the latest available valuation and carbon intensity data for each investment.
- Revenue Intensity represents a company's annual carbon footprint per every 1 million USD in annual sales.
- Investment Intensity represents a company's annual carbon footprint per every 1 million USD in EVIC (Enterprise Value including Cash).
- Financed Emissions are adjusted for coverage and reflect the total emissions financed for each asset class (even if less than 100% of the underlying investments have available carbon figures).
- The SASB Materiality Map links the 77 SICs Industries to 26 sustainability-related business issues, called "General Issue Categories," which are organized under five Sustainability Dimensions. This framework identifies financially material issues that are likely to impact the financial condition or operating performance of a company or other operating entity. For more information, please visit: <https://www.sasb.org/standards/materiality-map/>.
- SICs: Sustainable Industry Classification System, which is a two-tiered hierarchical industry classification system. For more information, please visit: <https://www.sasb.org/standards/download/>.

Information containing any historical information, data or analysis should not be taken as an indication or guarantee of any future performance, analysis, forecast or prediction. Past performance does not guarantee future results.

The Information may include “Signals,” defined as quantitative attributes or the product of methods or formulas that describe or are derived from calculations using historical data. Neither these Signals nor any description of historical data are intended to provide investment advice or a recommendation to make (or refrain from making) any investment decision or asset allocation and should not be relied upon as such. Signals are inherently backward-looking because of their use of historical data, and they are not intended to predict the future. The relevance, correlations and accuracy of Signals frequently will change materially.

The Information should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. All Information is impersonal and not tailored to the needs of any person, entity or group of persons.

None of the Information constitutes an offer to sell (or a solicitation of an offer to buy), any security, financial product or other investment vehicle or any trading strategy.

It is not possible to invest directly in an index. Exposure to an asset class or trading strategy or other category represented by an index is only available through third party investable instruments (if any) based on that index. MSCI does not issue, sponsor, endorse, market, offer, review or otherwise express any opinion regarding any fund, ETF, derivative or other security, investment, financial product or trading strategy that is based on, linked to or seeks to provide an investment return related to the performance of any MSCI index (collectively, “Index Linked Investments”). MSCI makes no assurance that any Index Linked Investments will accurately track index performance or provide positive investment returns. MSCI Inc. is not an investment adviser or fiduciary and MSCI makes no representation regarding the advisability of investing in any Index Linked Investments.

Index returns do not represent the results of actual trading of investible assets/securities. MSCI maintains and calculates indexes, but does not manage actual assets. The calculation of indexes and index returns may deviate from the stated methodology. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the index or Index Linked Investments. The imposition of these fees and charges would cause the performance of an Index Linked Investment to be different than the MSCI index performance.

The Information may contain back tested data. Back-tested performance is not actual performance, but is hypothetical. There are frequently material differences between back tested performance results and actual results subsequently achieved by any investment strategy.

Constituents of MSCI equity indexes are listed companies, which are included in or excluded from the indexes according to the application of the relevant index methodologies. Accordingly, constituents in MSCI equity indexes may include MSCI Inc., clients of MSCI or

suppliers to MSCI. Inclusion of a security within an MSCI index is not a recommendation by MSCI to buy, sell, or hold such security, nor is it considered to be investment advice.

Data and information produced by various affiliates of MSCI Inc., including MSCI ESG Research LLC and Barra LLC, may be used in calculating certain MSCI indexes. More information can be found in the relevant index methodologies on www.msci.com.

MSCI receives compensation in connection with licensing its indexes to third parties. MSCI Inc.’s revenue includes fees based on assets in Index Linked Investments. Information can be found in MSCI Inc.’s company filings on the Investor Relations section of msci.com.

MSCI ESG Research LLC is a Registered Investment Adviser under the Investment Advisers Act of 1940 and a subsidiary of MSCI Inc. Neither MSCI nor any of its products or services recommends, endorses, approves or otherwise expresses any opinion regarding any issuer, securities, financial products or instruments or trading strategies and MSCI’s products or services are not a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such, provided that applicable products or services from MSCI ESG Research may constitute investment advice. MSCI ESG Research materials, including materials utilized in any MSCI ESG Indexes or other products, have not been submitted to, nor received approval from, the United States Securities and Exchange Commission or any other regulatory body. MSCI ESG and climate ratings, research and data are produced by MSCI ESG Research LLC, a subsidiary of MSCI Inc. MSCI ESG Indexes, Analytics and Real Estate are products of MSCI Inc. that utilize information from MSCI ESG Research LLC. MSCI Indexes are administered by MSCI Limited (UK) and MSCI Deutschland GmbH.

Please note that the issuers mentioned in MSCI ESG

Research materials sometimes have commercial relationships with MSCI ESG Research and/or MSCI Inc. (collectively, “MSCI”) and that these relationships create potential conflicts of interest. In some cases, the issuers or their affiliates purchase research or other products or services from one or more MSCI affiliates. In other cases, MSCI ESG Research rates financial products such as mutual funds or ETFs that are managed by MSCI’s clients or their affiliates, or are based on MSCI Inc. Indexes. In addition, constituents in MSCI Inc. equity indexes include companies that subscribe to MSCI products or services. In some cases, MSCI clients pay fees based in whole or part on the assets they manage. MSCI ESG Research has taken a number of steps to mitigate potential conflicts of interest and safeguard the integrity and independence of its research and ratings. More information about these conflict mitigation measures is available in our Form ADV, available at <https://adviserinfo.sec.gov/firm/summary/169222>.

Any use of or access to products, services or information of MSCI requires a license from MSCI. MSCI, Barra, RiskMetrics, IPD and other MSCI brands and product names are the trademarks, service marks, or registered trademarks of MSCI or its subsidiaries in the United States and other jurisdictions. The Global Industry Classification Standard (GICS) was developed by and is the exclusive property of MSCI and S&P Global Market Intelligence. “Global Industry Classification Standard (GICS)” is a service mark of MSCI and S&P Global Market Intelligence.

MIFID2/MIFIR notice: MSCI ESG Research LLC does not distribute or act as an intermediary for financial instruments or structured deposits, nor does it deal on its own account, provide execution services for others or manage client accounts. No MSCI ESG Research product or service supports, promotes or is intended to support or promote any such activity. MSCI ESG Research is an independent provider of ESG data.
