MSCI World Adaptive Capped 2x Index (USD)

The MSCI World Adaptive Capped 2x Index is based on MSCI World Index, its parent index and captures large and mid-cap representation across 23 Developed Markets (DM) countries*. The index follows a capping approach where the cap level on the constituent weights of the larger stocks at each rebalance is not explicitly specified but is instead determined by the pre-defined maximum weight multiple applied to the smaller (uncapped) constituents of the parent index. The cap level and the stocks to which it is applied can vary at each rebalance. This approach aims to make the index methodology scalable and robust for a wide range of indexes covering different size segments over time.

For a complete description of the index methodology, please see Index methodology - MSCI.

CUMULATIVE INDEX PERFORMANCE — NET RETURNS (USD) (SEP 2010 – SEP 2025)

ANNUAL PERFORMANCE (%)

Year	MSCI World Adaptive Capped 2x	MSCI World
2024	11.04	18.67
