

Increasing efficiencies

OPPORTUNITY

A global benefits consulting leader was looking to amplify its investment consultancy services and came to us to address three opportunities: 1) assist their client's asset allocation strategies 2) provide better insights into alternative investments for their market risk and 3) regulatory reporting and enhance their ability to collate a wide range of complex data.

SOLUTION

MSCI's HedgePlatform was the best solution providing unique insights into alternative investments, its extensive regulatory reporting capabilities and its ability to collate large amounts of holdings. HedgePlatform seamlessly integrates into our RiskManager platform, providing them with a unique centralized source of insights and computations.

OUTCOME

Although the insights gained from the analytics are essential to their consultancy services, the computation is not part of the client's core business and outsourcing this process provided cost reduction and increased the efficiency of the risk department.
