MSCI World Screened Choice 100% Hedged to EUR Index (EUR)

The MSCI World Screened Choice 100% Hedged to EUR Index represents a close estimation of the performance that can be achieved by hedging the currency exposure of its parent index, the MSCI World Index, to the EUR, the "home" currency for the hedged index. The index is 100% hedged to the EUR by selling the USD forward at the one-month Forward rate. The Index is based on MSCI World, its parent index, which captures large and mid-cap representation across 23 Developed Markets (DM) countries*. The Index constituents are weighted according to their free float adjusted market capitalizations applicable to foreign investors. The index represents the performance of the broad market while excluding companies that are associated with Controversial Weapons or fail to comply with United Nations Global Compact principles. Constituent selection is based on data from MSCI ESG Research. Each country's weight within the Index will fluctuate over time according to market movements. Constituent weights are not rebalanced to the initial levels at any time.
