MSCI World Selection Minimum Volatility (USD) Index (USD)

The MSCI World Selection Minimum Volatility (USD) Index is based on a MSCI World Index, which consists of large and mid-cap companies in 23 Developed Markets (DM) countries*. The index aims to reflect the performance characteristics of a minimum variance strategy, while providing exposure to companies with high Environmental, Social and Governance (ESG) performance relative to their sector peers. The index is calculated by optimizing the MSCI World Selection Index, its parent index, for the lowest absolute risk (within a given set of constraints) in accordance with the MSCI Minimum Volatility Indexes methodology. The Index follows a two-methodology approach, where first the MSCI Selection methodology is applied and then the MSCI Minimum Volatility Indexes methodology is subsequently applied.

For a complete description of the index methodology, please see Index methodology - MSCI.
