

MSCI ACWI Core Multiple-Factor Index (USD)

The MSCI ACWI Core Multiple-Factor Index is based on MSCI ACWI Index, its parent index, which includes large and mid-cap stocks across 23 Developed and 24 Emerging Markets countries*. The index uses an optimization process that aims to maximize combined exposure to the three targeted factors – Value, Momentum, and Quality while controlling active risk, active specific risk, and net ex-ante beta relative to the parent index.

MSCI FACTOR BOX AND FaCS FRAMEWORK (Please refer to complete description of the MSCI FaCS methodology [here](#))

MSCI FaCS is a standard method for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.
