

MSCI GCC Countries Domestic IMI Islamic Index (USD)

The **MSCI GCC Countries Domestic IMI Islamic Index** reflects Sharia investment principles and is designed to measure the performance of the large, mid and small cap segments of the 6 GCC countries that are relevant for Islamic investors. The index, with 125 constituents applies stringent screens to exclude securities based on two types of criteria: business activities and financial ratios derived from total assets. The index uses the Domestic Inclusion Factor (DIF) as the free-float adjustment factor for the market capitalization of each security.

MSCI FACTOR BOX AND FaCS FRAMEWORK (Please refer to complete description of the MSCI FaCS methodology [here](#))

MSCI FaCS is a standard method for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.
