## INDEX FRAMEWORK

The MSCI Climate Paris Aligned Benchmark Select Indexes are constructed from underlying MSCI parent indexes following an optimization-based approach and aim to exceed the minimum technical requirements laid out in the EU Delegated Act, reduce the Index's exposure to physical risk arising from extreme weather events by at least 50%, increase the weight of companies which are exposed to climate transition opportunities and reduce the weight of companies which are exposed to climate transition risks, increase the weight of companies with credible carbon reduction targets through the weighting scheme, achieve a modest tracking error compared to the Parent Index and low turnover. The Indexes are rebalanced on a semi-annual basis, as of the close of the last business day of May and November, coinciding with the May and November Semi Annual Index Review of the MSCI Global Investable Market Indexes.
