

MSCI Russia 10/40 Index (USD)

The MSCI Russia 10/40 Index is designed to measure the performance of the large and mid cap segments of the Russian market. The MSCI 10/40 equity indexes are designed and maintained on a daily basis to take into consideration the 10% and 40% concentration constraints on funds subject to the UCITS III Directive. With 23 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Russia.

CUMULATIVE INDEX PERFORMANCE – GROSS RETURNS (USD) (MAY 2006 – JAN 2021)

ANNUAL PERFORMANCE (%)

Year	MSCI Russia 10/40	MSCI Russia
2020	-0.67	-11.64
2019	44.14	52.72
2018	0.39	0.52
2017	1.65	6.11
2016	54.77	55.93
2015	7.92	5.00
2014	-42.60	-45.86
2013	-1.29	1.35
2012	14.95	14.39
2011	-23.44	-19.30
2010	28.97	19.40
2009	143.66	104.91
2008	-72.41	-73.83
2007	37.77	24.79

MSCI FaCS provides absolute factor exposures relative to a broad global index - MSCI ACWI IMI.

Neutral factor exposure (FaCS = 0) represents MSCI ACWI IMI.

SECTOR WEIGHTS

- Energy 35.52%
- Materials 27.15%
- Communication Services 15.45%
- Financials 10.62%
- Consumer Staples 8.45%
- Utilities 2.81%

INDEX METHODOLOGY

Funds incorporated in member states of the European Union are subject to the UCITS III (Undertakings for Collective Investment in Transferable Securities) directive. In this directive (among other restrictions) a fund cannot invest more than 5% of its assets in securities issued by a single issuer. This limit can be increased up to 10%, provided that wherever the 5% limit is surpassed, the fund's exposure to these "larger" assets does not exceed 40% of the funds' total assets.

The MSCI 10/40 Indexes are constructed and maintained as pertinent benchmarks for UCITS III compliant funds that must meet these diversification requirements. Each MSCI 10/40 Index applies the 10/40 weighting constraints to an unconstrained MSCI index, the parent index. Whenever a weighting constraint is breached, the MSCI 10/40 Index rebalances to maintain UCITS III compliance.

The [MSCI 10/40 Index Methodology](#) also aims to maintain index stability, minimize tracking error versus the parent index and minimize index turnover.

FACTOR BOX AND FaCS METHODOLOGY

MSCI FaCS is a standard method ([MSCI FaCS Methodology](#)) for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.

ABOUT MSCI

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 45 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process. To learn more, please visit www.msci.com.
