

MSCI Emerging Markets GDP Weighted Index (USD)

The MSCI Emerging Markets GDP Weighted Index is based on the flagship MSCI Emerging Markets Index, its parent index, and includes large and mid cap stocks across 26 Emerging Markets (EM) countries*. The index uses a different weighting scheme than its cap weighted parent index, however. The weight of each country in the index is derived from its economic size (using GDP data) rather than the size of its equity market.

The MSCI Emerging Markets GDP Weighted Index was launched on Dec 06, 2005. Data prior to the launch date is back-tested data (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance – whether actual or back-tested – is no indication or guarantee of future performance.

INDEX METHODOLOGY

Each MSCI GDP Weighted Index is constructed by weighting each component country by its previous year's GDP figure. The weight of each constituent within a country is based on its free-float adjusted market capitalization. The primary sources for GDP data are the Organization for Economic Cooperation and Development (OECD), the Economist Intelligence Unit (EIU), the International Monetary Fund (IMF) and other government organizations. The index is rebalanced every year in May based on the previous year's GDP figures.

FACTOR BOX AND FaCS METHODOLOGY

MSCI FaCS is a standard method ([MSCI FaCS Methodology](#)) for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.
