

MSCI Europe Equal Weighted Index (USD)

The **MSCI Europe Equal Weighted Index** represents an alternative weighting scheme to its market cap weighted parent index, the MSCI Europe Index. The index includes the same constituents as its parent (large and mid cap securities across 15 Developed Markets (DM) countries in Europe*). However, at each quarterly rebalance date, all index constituents are weighted equally, effectively removing the influence of each constituents current price (high or low). Between rebalances, index constituent weightings will fluctuate due to price performance.

MSCI FACTOR BOX AND FaCS FRAMEWORK (Please refer to complete description of the MSCI FaCS methodology [here](#))

MSCI FaCS is a standard method for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.
