**INDEX METHODOLOGY**

The MSCI Infrastructure Index [methodology](#) aims to capture the opportunity set of listed companies that are owners or operators of infrastructure assets. Stocks that belong to a specific set of sub-industries derived from the Global Industry Classification Standard (GICS®) are combined into five Infrastructure sectors: Telecommunications Infrastructure, Utilities, Energy Infrastructure, Transportation Infrastructure and Social Infrastructure. The index is also based on the MSCI 20/35 Capped [methodology](#). The MSCI 20/35 Indexes constrain the weight of the largest group entity at 35%, and all other group entities at 20%, with a buffer of 10% applied on these limits at each index rebalancing. The MSCI 20/35 Indexes are rebalanced quarterly as of the last business day of each February, May, August and November, to coincide with the Quarterly Index Reviews of their parent indexes. The MSCI 20/35 Indexes are also rebalanced on an “as needed” basis. This means that an MSCI 20/35 Index is rebalanced at the end of any day on which the 35% and 20% constraints (without the buffer) are breached. Such “as needed” rebalancings ensure that the index remains within the specified weight limits.

**ABOUT MSCI**

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 45 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process.
