1 INTRODUCTION

The MSCI Unexpected Market Closure Indexes methodology aims to account for unexpected market closure (UMC) events affecting the trading of underlying MSCI Index constituents on the day of a scheduled index futures expiry. In case of such events, adjustments to the market performance of a given MSCI Index denoted by its index level will be made available as an MSCI Unexpected Market Closure Index level on subsequent days, at the resumption of the affected markets.

2 CALCULATING THE MSCI UNEXPECTED MARKET CLOSURE INDEX LEVEL

The MSCI Unexpected Market Closure Index level is calculated for any given underlying MSCI Index as per the following steps:

- Unexpected market closure event detection
- Corporate events treatment
- Calculation of MSCI Unexpected Market Closure Index level
- Conversion to target currency

2.1 UNEXPECTED MARKET CLOSURE EVENT DETECTION

An unexpected closure of the stock exchange on which the underlying Index constituents are listed will lead to interruption in trading of these constituents on scheduled index futures expiry day. There can be a number of circumstances that could affect trading on a given stock exchange with varying degrees and periods of impact. The events defined below¹ will result in the calculation of an MSCI Unexpected Market Closure Index level:

2.1.1 PARTIAL MARKET CLOSURES

An event on a given market (stock exchange) will be considered an “unexpected market closure event” when all of the below criteria are met:

- It is a regular trading day for that stock exchange
- A limitation on trading² remains in effect during the half hour period preceding the close of trading for that exchange. In order to account for the differences in liquidity patterns across Frontier Markets that are classified into very low, low or average liquidity markets, the potential limitation on trading is evaluated for the entire period of trading hours for such exchanges
- Interruption in trading affects at least 50% of the securities (by number) within MSCI ACWI + Frontier Markets IMI³ constituents listed on that exchange. In order to account for the differences in liquidity patterns across Frontier Markets that are classified into very low, low or average liquidity markets, if such an exchange lists fewer than 5 MSCI ACWI + Frontier Markets IMI constituents, the interruption in trading should affect all constituents listed on the particular exchange

For example, on the day of the index futures expiry that is a regular business day for a stock exchange on which x constituents of the MSCI ACWI + Frontier Markets IMI are listed, if (x/2) or

¹ In addition to the definitions of an unexpected market closure event described in this section, in rare scenarios where a market may be experiencing extreme Market Accessibility issues resulting in its reclassification, MSCI may consider triggering a UMC Event even if the relevant stock exchange(s) are open for trading.

² A limitation on trading will be recognized as complete lack of trading for associated index constituent listed on given exchange

³ Please refer to the MSCI Global Investable Market Indexes methodology at <https://www.msci.com/index/methodology/latest/GIMI>

more constituents⁴ do not trade within the last half hour of the scheduled trading close, the exchange will be noted to suffer an unexpected market closure event.

MSCI may attempt to determine the veracity of the outage on the stock exchange leading to an unexpected market closure event being detected. In cases where any contrary information is available noting business as usual proceedings on the stock exchange, MSCI will proceed with regular use of same-day prices and spot FX rates for securities listed on the stock exchange within the underlying Index for the index level calculation.

The securities in the underlying Index affected by suspensions, halted by reason of price movements otherwise exceeding pre-set levels permitted by the relevant exchange (i.e. circuit breakers being triggered), etc. on the expiry day, which do not trade in the half hour preceding the close of the stock exchange will be considered interrupted. For evaluating the fulfilment of the criterion of at least 50% securities within MSCI ACWI + Frontier Markets IMI being interrupted, these securities will contribute towards the check for this threshold violation.

A decision to permanently discontinue trading (i.e. delisting) in one or more of the stocks which then comprise the index will not be counted while determining the unexpected market closure event.

A stock exchange that has reopened for trading during a day on which an outage had occurred during earlier trading hours on the index futures expiry day will not be considered disrupted if it stays open through the last half hour preceding the scheduled market close.

2.1.2 FULL DAY MARKET CLOSURES

An exchange closure that is announced after the market close of the previous trading day will be considered as an unexpected market closure event. Generally, unexpected market closure events cannot occur on scheduled stock exchange holidays.

In a scenario where an exchange announced an exchange closure, but the re-open date is uncertain, the exchange closure on the first potential reopen date would be considered as an unexpected market closure event.

For example, on June 20, an exchange announced that it will be closed starting from June 25 but the reopen date of the exchange remains uncertain. The exchange closure on June 25 in this case would be considered as a scheduled holiday and not an unexpected market closure event. However, if the exchange were closed on June 26, then the exchange would be considered as experiencing an unexpected market closure event.

2.1.3 TREATMENT OF EXCHANGE HOLIDAYS

For exchanges that have a scheduled holiday on an index futures expiry day, the business day prior to the scheduled index futures expiry will be considered for determination of the unexpected market closure event.

2.2 CORPORATE EVENTS AND DIVIDENDS TREATMENT

The corporate events for the calculation of the Unexpected Market Closure Index level are maintained and implemented in accordance with the respective underlying Index Methodology. The

⁴ for odd values of x, (x/2) is rounded up to the next integer value

details regarding specific treatment of corporate events relevant to the Indexes can be found in the underlying Index methodology books.

In the event of unexpected market closure events on index futures expiry day affecting stock exchanges on which underlying Index constituents are listed, corporate events related to all securities listed only on the affected exchanges, with ex-date between index futures expiry day until the reopen day of listing exchanges will be deferred to the first non-disrupted reopen day for the market for the calculation of the Unexpected Market Closure Index level.

For corporate events on underlying Index constituents with ex-date on or after index futures expiry day until the reopen day of stock exchanges suffering an unexpected market closure event, if Price Adjustment Factor (PAF) needs to be applied, all such respective adjustments for the index constituent are aggregated as a $PAF_{aggregate}$, and applied to the closing market price of the affected security on the first non-disrupted reopen day.

Similarly, for dividends on underlying Index constituents with ex-date between index futures expiry day until the reopen day of listing exchanges affected by unexpected market closure events, the reinvestment within the MSCI Daily Total Return (DTR) Indexes will be made as of the close of the reopen day.

The Index constituent deletions within the Unexpected Market Closure Index level calculation follow the treatment within the underlying Index. In cases where the constituent being deleted is affected by an unexpected market closure event, if the security trades on the non-disrupted reopen day, then the closing market price from the reopen day will be used for deletion. If the security stopped trading during the effective days of the unexpected market closure event, a deletion price consistent with the underlying Index will be used.

Further details regarding the treatment of corporate events and dividends relevant to the MSCI Indexes can be found in the MSCI Corporate Events methodology and in the MSCI Index Calculation methodology book respectively.

The underlying Index methodology books, the MSCI Index Calculation methodology book and the MSCI Corporate Events methodology book are available at:

<https://www.msci.com/index/methodology/latest/CE>.

2.3 CALCULATION OF UNEXPECTED MARKET CLOSURE INDEX LEVEL

The MSCI Unexpected Market Closure Index level is calculated as per the MSCI Index Calculation methodology, with adjustments for the calculation noted in this methodology book to enable replicability of index performance at index futures expiry.

On the day of the scheduled index futures expiry, if there are no unexpected market closure events affecting any underlying Index constituents, the index level will be considered final for the current expiry period and no adjustments will be made to this value.

In the presence of any unexpected market closure event affecting any exchange within the underlying Index on the index futures expiry day, an Unexpected Market Closure Index level will be provided on subsequent business days to account for the interruption in trading. The Unexpected Market Closure Index level will be updated at the close of the first reopen day for each of the affected stock exchanges until no such index constituents remains affected, or 15 weekdays days have elapsed after the expiry day.

The “reopen day” for a stock exchange impacted by an unexpected market closure event on an index futures expiry day will be a regular trading day after the index futures expiry day when it is no longer impacted by an unexpected market closure event as defined in Section 2.1. The MSCI Unexpected Market Closure Index level is calculated using closing market prices⁵ from the index futures expiry day for stock exchanges that operate as per regular schedule, while closing market prices from the reopen day for stock exchanges that are affected by unexpected market closure events are used. The WM Reuters Spot FX rates from the same day corresponding to security prices are used for the index level calculation.

The index level on the index futures expiry day will be the same as the underlying MSCI Index level. If any exchanges listing the constituents of the underlying MSCI Index suffer any unexpected market closure events, adjustments will be available starting on the next business day, contingent upon reopening of the affected exchange.

Unexpected Market Closure Index levels will only be calculated for a fixed period of 15 weekdays following scheduled index futures expiry. If any of the affected exchanges do not reopen at the close of this period, the security prices from expiry day will be carried over for the calculation of the final Unexpected Market Closure Index level for the period.

2.3.1 UNEXPECTED MARKET CLOSURE INDEX LEVEL

The Unexpected Market Closure Index level for the Price Index level of a MSCI Index will be calculated as

$$\text{UnexpectedMarketClosurePriceIndexLevelUSD}_{t+k} = \text{PriceIndexLevelUSD}_{t-1} * \frac{\text{IndexAdjustedMarketCapUSD}_{t+k}}{\text{IndexInitialMarketCapUSD}_t}$$

Where:

- *UnexpectedMarketClosurePriceIndexLevelUSD_{t+k}* is the Unexpected Market Closure Index level for index futures expiry on *t*, calculated after *k* business days due to unexpected market closure events; *k* = 0 when there are no such events and maximum allowed value of *k* is 15.
- *PriceIndexLevelUSD_{t-1}* is the Price Index level in USD at time *t-1*.
- *IndexAdjustedMarketCapUSD_{t+k}* is the Adjusted Market Capitalization of the index in USD at time *t+k*.
- *IndexInitialMarketCapUSD_t* is the Initial Market Capitalization of the index in USD at time *t*.

⁵ As per MSCI Closing Price Policy in MSCI Index Calculation methodology. In cases where MSCI apply an adjustment to the security prices used in the underlying MSCI Indexes as a result of market reclassification following deteriorations of its accessibility by international investors, MSCI will also reflect this adjustment on the UMC Index level. This will be applied even if the effective implementation date of the market reclassification is after the 15-day window.

The Unexpected Market Closure Daily Total Return Index level also accounts for impact of daily dividends, in addition to applying the change in the market performance to the previous period Index level.

The Unexpected Market Closure Index level for the Daily Total Return (DTR) Index level of a MSCI Index will be calculated as

$$UnexpectedMarketClosureDTRIndexLevelUSD_{t+k} = DTRIndexLevelUSD_{t-1} * \frac{(IndexAdjustedMarketCapUSD_{t+k} + IndexDividendImpactUSD_{t+k})}{IndexInitialMarketCapUSD_t}$$

Where:

- $UnexpectedMarketClosureDTRIndexLevelUSD_{t+k}$ is the Unexpected Market Closure Index level for index futures expiry on t , calculated after k business days due to unexpected market closure events; $k = 0$ when there are no such events and maximum allowed value of k is 15.
- $DTRIndexLevelUSD_{t-1}$ is the Daily Total Return Index level in USD at time $t-1$.
- $IndexDividendImpactUSD_{t+k}$ is the gross or net amount of dividends in USD to be reinvested in the index in USD at time $t+k$.

2.3.2 INDEX MARKET CAPITALIZATION

$$IndexAdjustedMarketCapUSD_{t+k} = \sum_{V \in I, t} \sum_{s \in V, j} \frac{EndOfDayNumberOfShares_{t-1} * PricePerShare_{t+j} * InclusionFactor_t * PAF_{tAggregate}}{FXrate_{t+j}}$$

$IndexInitialMarketCapUSD_t =$

$$\sum_{s \in I, t} \frac{EndOfDayNumberOfShares_{t-1} * PricePerShare_{t-1} * InclusionFactor_t}{FXrate_{t-1}}$$

- Where:
- $EndOfDayNumberOfShares_{t-1}$ is the number of shares of security s at the end of day $t-1$ listed on stock exchange V .
- $PricePerShare_{t+j}$ is the price per share of the security s at time $t+j$. When the listing exchange V is not undergoing an unexpected market closure event i.e. j is 0 for stock exchanges that have no interruptions on index futures expiry day t . j is reopen day for each affected stocks exchanges
- $PricePerShare_{t-1}$ is the price per share of security s at time $t-1$.
- $InclusionFactor_t$ is the inclusion factor of the security s at time t . The inclusion factor can be one or the combination of the following factors: Foreign Inclusion Factor, Domestic Inclusion Factor, Growth Inclusion Factor, Value Inclusion Factor, Index Inclusion Factor (*).

- $PAF_{tAggregate}$ is the aggregate Price Adjustment Factor of the security s at time $t+k$, as described in the Corporate Events treatment section.
- $FXrate_{t+j}$ is the FX rate of the price currency of security s vs USD at time $t+j$. It is the value of 1 USD in foreign currency.
- $FXrate_{t-1}$ is the FX rate of the price currency of security s vs USD at time $t-1$. It is the value of 1 USD in foreign currency.

2.3.3 DIVIDEND IMPACT

$IndexDividendImpactUSD_{t+k} =$

$$\sum_{V \in I, t, s \in V, t} \sum_{t}^{t+j} \frac{EndOfDayNumberOfShares_{ex-date-1} * DividendPerShare_{t+j} * InclusionFactor_t}{FXrate_{t+j}}$$

Where:

- $EndOfDayNumberOfShares_{ex-date-1}$ is the number of shares of the security s at the end of the dividend $ex-date-1$.
- $DividendPerShare_{t+k}$ is the gross or net dividend per share expressed in the same currency unit as the price per share of the security s to be reinvested at time $t+k$.

2.4 CONVERSION TO TARGET CURRENCY

The Unexpected Market Closure Index level for the underlying MSCI Index can be calculated into any currency by converting the index in USD into the selected currency using the formula below. The FX rate from the index futures expiry day will be used for the conversion of the Unexpected Market Closure Index level from USD to target currency.

If the base date of the index is prior to the start date of the currency, the indexes will be rebased and converted using the following formula:

$$UnexpectedMarketClosureIndexLevelinCurrency_{t+k} = 100 * \frac{UnexpectedMarketClosureIndexLevelinUSD_{t+k}}{IndexLevelinUSD_{currency_base_date}} * \frac{FXrate_t}{FXrate_{currency_base_date}}$$

Note that 100 in the formula is the base value. This base value can be different than 100 (e.g. 1000 depending on the indexes).

- If the base date of the index is equal or posterior to the start date of the currency, the indexes will be converted only, using the following formula:

$$UnexpectedMarketClosureIndexLevelinCurrency_{t+k} = UnexpectedMarketClosureIndexLevelinUSD_{t+k} * \frac{FXrate_t}{FXrate_{index_base_date}}$$

METHODOLOGY BOOK TRACK CHANGES

The following sections have been modified since November 2018

Section 2.3.3: Dividend Impact

- Clarification within the Index Dividend Impact USD formula

The following sections have been modified since October 2023

Section 2.1: Unexpected Market Closure Event Detection

- Clarification on the treatment of Unexpected Market Closure Event

Appendix I: Enhancements to the MSCI Unexpected Market Closure Indexes Methodology Starting from June 1, 2024

- New appendix added to describe the results of the Consultation on Enhancements to the MSCI Unexpected Market Closure Indexes Methodology

The following sections have been modified since June 2024

Section 2.1: Unexpected Market Closure Event Detection

- Clarification on the treatment of Unexpected Market Closure Event

Section 2.3: Calculation of Unexpected Market Closure Index Level

- Updated to reflect 15-day window instead of 5, following an unexpected market closure event

Appendix I: Enhancements to the MSCI Unexpected Market Closure Indexes Methodology Starting from June 1, 2024

- Appendix removed

About MSCI

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 50 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process.

To learn more, please visit www.msci.com.

The process for submitting a formal index complaint can be found on the index regulation page of MSCI's website at: <https://www.msci.com/index-regulation>.

Notice and disclaimer

This document is research for informational purposes only and is intended for institutional professionals with the analytical resources and tools necessary to interpret any performance information. Nothing herein is intended to promote or recommend any product, tool or service.

This document and all of the information contained in it, including without limitation all text, data, graphs, charts (collectively, the "Information") is the property of MSCI Inc. or its subsidiaries (collectively, "MSCI"), or MSCI's licensors, direct or indirect suppliers or any third party involved in making or compiling any Information (collectively, with MSCI, the "Information Providers") and is provided for informational purposes only. The Information may not be modified, reverse-engineered, reproduced or disseminated in whole or in part without prior written permission from MSCI. All rights in the Information are reserved by MSCI and/or its Information Providers.

The Information may not be used to create derivative works or to verify or correct other data or information. For example (but without limitation), the Information may not be used to create indexes, databases, risk models, analytics, software, or in connection with the issuing, offering, sponsoring, managing or marketing of any securities, portfolios, financial products or other investment vehicles utilizing or based on, linked to, tracking or otherwise derived from the Information or any other MSCI data, information, products or services.

The user of the Information assumes the entire risk of any use it may make or permit to be made of the Information. NONE OF THE INFORMATION PROVIDERS MAKES ANY EXPRESS OR IMPLIED WARRANTIES OR REPRESENTATIONS WITH RESPECT TO THE INFORMATION (OR THE RESULTS TO BE OBTAINED BY THE USE THEREOF), AND TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, EACH INFORMATION PROVIDER EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES (INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF ORIGINALITY, ACCURACY, TIMELINESS, NON-INFRINGEMENT, COMPLETENESS, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE) WITH RESPECT TO ANY OF THE INFORMATION.

Without limiting any of the foregoing and to the maximum extent permitted by applicable law, in no event shall any Information Provider have any liability regarding any of the Information for any direct, indirect, special, punitive, consequential (including lost profits) or any other damages even if notified of the possibility of such damages. The foregoing shall not exclude or limit any liability that may not by applicable law be excluded or limited, including without limitation (as applicable), any liability for death or personal injury to the extent that such injury results from the negligence or willful default of itself, its servants, agents or sub-contractors.

Information containing any historical information, data or analysis should not be taken as an indication or guarantee of any future performance, analysis, forecast or prediction. Past performance does not guarantee future results.

The Information may include "Signals," defined as quantitative attributes or the product of methods or formulas that describe or are derived from calculations using historical data. Neither these Signals nor any description of historical data are intended to provide investment advice or a recommendation to make (or refrain from making) any investment decision or asset allocation and should not be relied upon as such. Signals are inherently backward-looking because of their use of historical data, and they are not intended to predict the future. The relevance, correlations and accuracy of Signals frequently will change materially.

The Information should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. All Information is impersonal and not tailored to the needs of any person, entity or group of persons.

None of the Information constitutes an offer to sell (or a solicitation of an offer to buy), any security, financial product or other investment vehicle or any trading strategy.

It is not possible to invest directly in an index. Exposure to an asset class or trading strategy or other category represented by an index is only available through third party investable instruments (if any) based on that index. MSCI does not issue, sponsor, endorse, market, offer, review or otherwise express any opinion regarding any fund, ETF, derivative or other security, investment, financial product or trading strategy that is based on, linked to or seeks to provide an investment return related to the performance of any MSCI index (collectively, "Index Linked Investments"). MSCI makes no assurance that any Index Linked Investments will accurately track index performance or provide positive investment returns. MSCI Inc. is not an investment adviser or fiduciary and MSCI makes no representation regarding the advisability of investing in any Index Linked Investments.

Index returns do not represent the results of actual trading of investible assets/securities. MSCI maintains and calculates indexes, but does not manage actual assets. The calculation of indexes and index returns may deviate from the stated methodology. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the index or Index Linked Investments. The imposition of these fees and charges would cause the performance of an Index Linked Investment to be different than the MSCI index performance.

The Information may contain back tested data. Back-tested performance is not actual performance, but is hypothetical. There are frequently material differences between back tested performance results and actual results subsequently achieved by any investment strategy.

Constituents of MSCI equity indexes are listed companies, which are included in or excluded from the indexes according to the application of the relevant index methodologies. Accordingly, constituents in MSCI equity indexes may include MSCI Inc., clients of MSCI or suppliers to MSCI. Inclusion of a security within an MSCI index is not a recommendation by MSCI to buy, sell, or hold such security, nor is it considered to be investment advice.

Data and information produced by various affiliates of MSCI Inc., including MSCI ESG Research LLC and Barra LLC, may be used in calculating certain MSCI indexes. More information can be found in the relevant index methodologies on www.msci.com.

MSCI receives compensation in connection with licensing its indexes to third parties. MSCI Inc.'s revenue includes fees based on assets in Index Linked Investments. Information can be found in MSCI Inc.'s company filings on the Investor Relations section of msci.com.

MSCI ESG Research LLC is a Registered Investment Adviser under the Investment Advisers Act of 1940 and a subsidiary of MSCI Inc. Neither MSCI nor any of its products or services recommends, endorses, approves or otherwise expresses any opinion regarding any issuer, securities, financial products or instruments or trading strategies and MSCI's products or services are not a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such, provided that applicable products or services from MSCI ESG Research may constitute investment advice. MSCI ESG Research materials, including materials utilized in any MSCI ESG Indexes or other products, have not been submitted to, nor received approval from, the United States Securities and Exchange Commission or any other regulatory body. MSCI ESG and climate ratings, research and data are produced by MSCI ESG Research LLC, a subsidiary of MSCI Inc. MSCI ESG Indexes, Analytics and Real Estate are products of MSCI Inc. that utilize information from MSCI ESG Research LLC. MSCI Indexes are administered by MSCI Limited (UK) and MSCI Deutschland GmbH.

Please note that the issuers mentioned in MSCI ESG Research materials sometimes have commercial relationships with MSCI ESG Research and/or MSCI Inc. (collectively, "MSCI") and that these relationships create potential conflicts of interest. In some cases, the issuers or their affiliates purchase research or other products or services from one or more MSCI affiliates. In other cases, MSCI ESG Research rates financial products such as mutual funds or ETFs that are managed by MSCI's clients or their affiliates, or are based on MSCI Inc. Indexes. In addition, constituents in MSCI Inc. equity indexes include companies that subscribe to MSCI products or services. In some cases, MSCI clients pay fees based in whole or part on the assets they manage. MSCI ESG Research has taken a number of steps to mitigate potential conflicts of interest and safeguard the integrity and independence of its research and ratings. More information about these conflict mitigation measures is available in our Form ADV, available at <https://adviserinfo.sec.gov/firm/summary/169222>.

Any use of or access to products, services or information of MSCI requires a license from MSCI. MSCI, Barra, RiskMetrics, IPD and other MSCI brands and product names are the trademarks, service marks, or registered trademarks of MSCI or its subsidiaries in the United States and other jurisdictions. The Global Industry Classification Standard (GICS) was developed by and is the exclusive property of MSCI and S&P Global Market Intelligence. "Global Industry Classification Standard (GICS)" is a service mark of MSCI and S&P Global Market Intelligence.

MIFID2/MIFIR notice: MSCI ESG Research LLC does not distribute or act as an intermediary for financial instruments or structured deposits, nor does it deal on its own account, provide execution services for others or manage client accounts.
