

# MSCI Germany Factor Mix A-Series Capped Index (USD)

MSCI Factor Mix A-Series Indexes are constructed as the combination of three MSCI Factor Indexes: MSCI Quality Index, MSCI Value Weighted Index and MSCI Minimum Volatility Index. Each component index in the MSCI Factor Mix A-Series Index is attributed equal weight (1/3) at each rebalancing. For certain markets where it may not be possible to construct the MSCI Minimum Volatility Index due to the concentrated nature of the market, MSCI will replace the MSCI Minimum Volatility Index with the MSCI Risk Weighted Index in the construction of the MSCI Factor Mix A-Series Index. The MSCI Factor Mix A-Series Capped Index is designed by applying the MSCI A-Series Capped Index [methodology](#) to the standard MSCI Factor Mix A-Series Index. The MSCI A-Series capped methodology aims to produce a resulting index that targets inclusion of 25 stocks and applies the MSCI 25/50 Index Methodology, i.e., no issuer has a weight above 25%, and the sum of weights of all issuers with weights above 5% does not exceed 50%. To do so, the A-Series methodology includes constituents of the MSCI Small Cap Index in cases where the MSCI Standard Index has less than 25 securities.

For a complete description of the index methodology, please see [Index methodology - MSCI](#).

**MSCI FACTOR BOX AND FaCS FRAMEWORK (Please refer to complete description of the MSCI FaCS methodology [here](#))**

MSCI FaCS is a standard method for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.
