

# MSCI WORLD MULTIPLE-FACTOR ESG TARGET INDEX (USD)

The MSCI World Multiple-Factor ESG Target Index is based on MSCI World Index, its parent index, which includes large and mid-cap stocks across 23 Developed Market (DM) countries\* across the world. The index is designed to represent the performance of a strategy that seeks systematic integration of environmental, social and governance (ESG) norms in factor investing, by seeking higher exposure to combination of style factors along with the improvement in the ESG profile of the index.

The MSCI World Multiple-Factor ESG Target Index was launched on Sep 28, 2017. Data prior to the launch date is back-tested data (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance -- whether actual or back-tested -- is no indication or guarantee of future performance.

## INDEX METHODOLOGY

The MSCI World Multiple-Factor ESG Target Index is optimization-based indexes that aim to maximize their exposure to multiple style factors while improving the ESG profile for the index relative to that of the underlying parent index (MSCI World). They are constructed using individual stock exposures to the target factors along with specific ESG score criteria. The MSCI World Multiple-Factor ESG Target Index is constructed based on an optimization process from the underlying Parent Index (MSCI World) using a Barra Equity Model to maximize the index-level exposure to the targeted style factors while controlling tracking error relative to the Parent Index (MSCI World).

The style factors targeted in the MSCI World Multiple-Factor ESG Target Index are the four factor families: Value, Quality, Momentum and Low Size. These factor families are described using individual factor scores from MSCI Barra Global Equity Model for Long-Term Investors ("GEMTLT") model. The eligible universe is the universe of all the securities in the Parent Index that are not involved in very severe ESG controversies ("Red flags") or in controversial weapons. The MSCI World Multiple-Factor ESG Target Index is rebalanced on a semi-annual basis, usually as of the close of the last business day of May and November, coinciding with the May and November Semi-Annual Index Reviews (SAIRs) of the MSCI Global Investable Market Indexes.
