

# MSCI Korea 25/50 US Dollar Hedged Index (USD)

The MSCI Korea 25/50 US Dollar Hedged Index represents a close estimation of the performance that can be achieved by hedging the currency exposure of its parent index, the MSCI Korea 25/50 Index, to the USD, or the "home" currency for the hedged index. The index is 100% hedged to the USD by selling the WON forward at the one-month Forward rate. The parent index is composed of large and mid cap stocks. It applies certain investment limits that are imposed on regulated investment companies, or RICs, under the current US Internal Revenue Code.

## CUMULATIVE INDEX PERFORMANCE – NET RETURNS (USD) (APR 2007 – APR 2022)

## ANNUAL PERFORMANCE (%)

Year	MSCI Korea 25/50 Hedged to USD	MSCI Korea 25/50 (Local)	MSCI Korea 25/50 (USD)
2021	1.54	1.74	-7.03
2020	33.23	31.87	40.39
2019	14.54	12.52	8.56
2018	-15.28	-16.62	-20.01
2017	29.48	28.68	45.17
2016	10.98	10.95	7.71
2015	-0.71	-0.24	-6.49
2014	-8.86	-7.13	-10.83
2013	0.64	2.59	4.07
2012	10.14	12.19	20.72
2011	-11.61	-10.68	-12.00
2010	23.29	23.52	26.74
2009	65.19	58.41	71.35
2008	-36.67	-39.84	-55.29

<sup>1</sup> Based on monthly net returns data

<sup>2</sup> Based on NY FED Overnight SOFR from Sep 1 2021 & on ICE LIBOR 1M prior that date

The MSCI Korea 25/50 US Dollar Hedged Index was launched on Nov 26, 2013. Data prior to the launch date is back-tested data (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance – whether actual or back-tested – is no indication or guarantee of future performance.

## INDEX METHODOLOGY

The MSCI Hedged Indexes hedge the foreign currency of the parent index back to a "home" currency by selling the foreign currency forward at the one-month Forward rate. The amount of forwards sold on the last business day of the month corresponds to the market cap weight of the securities in the parent index as of the close of two business days before the first calendar day of the following month. The amount hedged is kept constant over the whole month.

There are two components to the return of an MSCI Hedged Index: 1) the performance of the unhedged index in the home currency; and, 2) the Hedge Impact (which aims to represent the gain or loss on the Forward contracts) in the home currency. For example, if a US-based investor were to invest in the MSCI EAFE Index, the calculation would combine the unhedged MSCI EAFE Index return in USD with the performance impact of hedging the currency exposure of the 12 other foreign currencies of the MSCI EAFE Index relative to the USD.

The index also conforms to the MSCI 25/50 capped index methodology which takes into account the investment limits required of regulated investment companies, or RICs, under the current US Internal Revenue Code. One requirement of a RIC is that at the end of each quarter of its tax year no more than 25% of the value of the RIC's assets may be invested in a single issuer and the sum of the weights of all issuers representing more than 5% of the fund should not exceed 50% of the fund's total assets. The MSCI 25/50 Index methodology aims to minimize index turnover, tracking error and extreme deviation from the parent index. The indexes are rebalanced quarterly. Changes resulting from each rebalancing are made as of the close of the last business day of February, May, August and November, coinciding with the quarterly index reviews of their parent indexes.

## ABOUT MSCI

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 45 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process.
