

MSCI EMERGING MARKET ISLAMIC INDEX (USD)

The MSCI Emerging Market Islamic Index reflects Sharia investment principles and is designed to measure the performance of the large and mid cap segments across 26 Emerging Markets (EM) countries* that are relevant for Islamic investors. The index, with 306 constituents, applies stringent screens to exclude securities based on two types of criteria: business activities and financial ratios derived from total assets.

The MSCI Emerging Market Islamic Index was launched on Jul 26, 2007. Data prior to the launch date is back-tested data (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance -- whether actual or back-tested -- is no indication or guarantee of future performance.

INDEX METHODOLOGY

The methodology for the MSCI Global Islamic Indexes follow Sharia investment principles and does not allow investment in companies that are directly active in, or derive more than 5% of their revenues from such business activities as alcohol, tobacco, pork-related products, conventional financial services, defense/weapons, gambling, or adult entertainment.

In addition, the MSCI Global Islamic Indexes do not allow investment in companies deriving significant income from interest or companies that have excessive leverage. MSCI uses three financial ratios to screen for such companies: 1) total debt over total assets; 2) the sum of a company's cash and interest-bearing securities over total assets; and 3) the sum of a company's accounts receivables and cash over total assets. None of these financial ratios may exceed 33.33%.

FACTOR BOX AND FaCS METHODOLOGY

MSCI FaCS is a standard method ([MSCI FaCS Methodology](#)) for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.
