

ESG and Risk Management Integration

Hitendra Varsani: Welcome, everyone, from our global home offices. MSCI Research is committed to bringing you our latest insights into key themes driving markets. My name is Hitendra Varsani. I'm part of MSCI's Core Research team based in London. And I'm joined with my colleague, Guido Giese, a thought leader in ESG research.

The recent crisis has brought risk management to the forefront of clients' minds, recognizing the fact that risk, return, and long-term sustainability are interlinked, and gaining transparency on key exposures is critical. At MSCI, we are leaders in factors in ESG, and we've been conducting deep research on the impact of environmental, social, and government issues in portfolios and indexes, as ESG has become a key consideration throughout the investment process.

Now let's turn to Guido, one of our experts in ESG research. Guido, could you walk us through some of your key findings in ESG during the COVID-19 crisis and how that reflects on the long-term characteristics that you've identified in your work?

Guido Giese: Yeah. Now, at MSCI, we've done quite a bit of research on the financial relevance of MSCI ESG Ratings. So we looked at the difference between high ESG-rated companies versus low-rated companies for a life track record of our ratings, which is now 13 years, since 2007. And what we found over this long period of time is that high ESG-rated companies were clearly less exposed to systematic risk, meaning in market downturns, they showed more stable earnings but also more stable stock prices. And we've seen the same in MSCI ESG Indexes that are based on MSCI ESG Ratings. They've also shown clearly less exposure to systematic risk. So in market downturns, they were typically doing better than the benchmark. And over long periods of time, we've seen that our ESG Indexes at a global level have outperformed the MSCI ACWI, so the benchmark.

Now, the latest coronavirus crisis was, of course, the first real world stress test for our ESG Indexes since the financial crisis. And although it's a short period of time, we were very interested to see the performance of our different ESG Index families compared to the benchmark. And we found that during the crisis, so the first quarter of 2020, the ESG Indexes have outperformed their benchmark even more than what we've seen in the long term, which means it confirms our understanding that ESG clearly added resilience to your portfolio.

Hitendra Varsani: It's good to see the consistency in the outperformance of ESG Indexes across various markets and reflecting the long term research that we conducted. Now let's address a couple of misconceptions, as well as questions that we receive in the field. And the first is, is the recent ESG outperformance simply due to the oil price collapse? Is it due to the underperformance of the energy sector? And the second question that we often get asked is, is ESG simply masking a large cap quality factor? Could you share your thoughts?

Guido Giese: Yes, these are the questions we really get very often. Many investors say, oh, we like the performance of your ESG Indexes. But is it really the ESG effect? Isn't it just an [inaudible] in oil or an [inaudible] in quality stocks? So to address this question, what we've done, we integrated our ESG Rating into our MSCI Barra Factor model, which allows us to do a Performance Factor Attribution to all the different factors, plus ESG. And we did such a Factor Attribution for all our MSCI ESG Indexes over long periods of time and the coronavirus crisis. And the results that we got was actually a very consistent picture. And I would like to show you one slide showing the active performance of our ESG Indexes during the first quarter of this year, so the crisis situation. So what you see in the following slide is the active performance, so the outperformance compared to benchmark, of the different ESG Indexes. On the left hand side, you see our ESG Universal, which has a slight tilt towards high-rated companies, compared to benchmark. Then you see the ESG Leaders, the ESG Focus, that has a stronger ESG tilt. And finally, on the right hand side, the SRI Index, which has the strongest ESG tilt.

Now, the different colors indicate the performance contributions that we see in our factor model. And what you see very clearly, the outperformance has not been created by industry position. So there's no large oil factor back in there, which is by intention, because our ESG Index has actually tracked the sector allocation of the benchmark fairly closely. And you can see there isn't a big performance contribution from factors. The outperformance came from two sources. The first source is what you can see here, is from equity style factors. This is in fact a tilt towards quality stocks. So quality has, in fact, helped performance. But even after controlling for the contribution from quality, we see there the clearly positive contribution from the ESG Rating. And what is quite amazing, when you move from left to right on the slide, you're moving to higher ESG scores. You're also moving to higher contributions from ESG. So the performance effect that was triggered by the ESG Rating has been kind of monotonically increasing in the ESG Score of the index. So in a nutshell, after controlling for all the other factors, there has been a clear, positive contribution from the ESG Rating. And I mean, I think this is important because this is also how investors nowadays would like to use ESG. They would like to use ESG alongside other traditional factors they've been using for many years. And this is actually a question that I'm very interested in, Hitendra. You've been working with factors for many, many years. How do traditional factor investors integrate ESG?

Hitendra Varsani: So over the last few years, MSCI has published extensive research on the integration of ESG and active funds and indexes, as well as Factor Indexes. And over time, we've seen a growing demand to put this theory into practice. Now, in fact, the recent crisis has demonstrated through live stress tests the complementary characteristics of overlaying ESG on defensive factors, such as minimum volatility or quality. And this brings us to our latest innovation, building on MSCI's strength in Minimum Volatility Indexes. We've recently launched Min Vol Plus ESG to meet client demand. We expect this trend to continue across the full range of Factor Indexes, as well as Multi-Factor Indexes. Our clients are also keen for MSCI to extend ESG in factor investing and offerings in the fixed income market. And that's a journey that we have started.

I'd like to thank Guido for your insights. And thank you all for listening. Stay safe.

About MSCI

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 45 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process. To learn more, please visit www.msci.com.

The user of the Information assumes the entire risk of any use it may make or permit to be made of the Information. NONE OF THE INFORMATION PROVIDERS MAKES ANY EXPRESS OR IMPLIED WARRANTIES OR REPRESENTATIONS WITH RESPECT TO THE INFORMATION (OR THE RESULTS TO BE OBTAINED BY THE USE THEREOF), AND TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, EACH INFORMATION PROVIDER EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES (INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF ORIGINALITY, ACCURACY, TIMELINESS, NON-INFRINGEMENT, COMPLETENESS, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE) WITH RESPECT TO ANY OF THE INFORMATION.

Without limiting any of the foregoing and to the maximum extent permitted by applicable law, in no event shall any Information Provider have any liability regarding any of the Information for any direct, indirect, special, punitive, consequential (including lost profits) or any other damages even if notified of the possibility of such damages. The foregoing shall not exclude or limit any liability that may not by applicable law be excluded or limited, including without limitation (as applicable), any liability for death or personal injury to the extent that such injury results from the negligence or willful default of itself, its servants, agents or sub-contractors.

Information containing any historical information, data or analysis should not be taken as an indication or guarantee of any future performance, analysis, forecast or prediction. Past performance does not guarantee future results.

The Information should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. All Information is impersonal and not tailored to the needs of any person, entity or group of persons.

None of the Information constitutes an offer to sell (or a solicitation of an offer to buy), any security, financial product or other investment vehicle or any trading strategy.

It is not possible to invest directly in an index. Exposure to an asset class or trading strategy or other category represented by an index is only available through third party investable instruments (if any) based on that index. MSCI does not issue, sponsor, endorse, market, offer, review or otherwise express any opinion regarding any fund, ETF, derivative or other security, investment, financial product or trading strategy that is based on, linked to or seeks to provide an investment return related to the performance of any MSCI index (collectively, "Index Linked Investments"). MSCI makes no assurance that any Index Linked Investments will accurately track index performance or provide positive investment returns. MSCI Inc. is not an investment adviser or fiduciary and MSCI makes no representation regarding the advisability of investing in any Index Linked Investments.

Index returns do not represent the results of actual trading of investible assets/securities. MSCI maintains and calculates indexes, but does not manage actual assets. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the index or Index Linked Investments. The imposition of these fees and charges would cause the performance of an Index Linked Investment to be different than the MSCI index performance.

The Information may contain back tested data. Back-tested performance is not actual performance, but is hypothetical. There are frequently material differences between back tested performance results and actual results subsequently achieved by any investment strategy.

Constituents of MSCI equity indexes are listed companies, which are included in or excluded from the indexes according to the application of the relevant index methodologies. Accordingly, constituents in MSCI equity indexes may include MSCI Inc., clients of MSCI or suppliers to MSCI. Inclusion of a security within an MSCI index is not a recommendation by MSCI to buy, sell, or hold such security, nor is it considered to be investment advice.

Data and information produced by various affiliates of MSCI Inc., including MSCI ESG Research LLC and Barra LLC, may be used in calculating certain MSCI indexes. More information can be found in the relevant index methodologies on www.msci.com.

MSCI receives compensation in connection with licensing its indexes to third parties. MSCI Inc.'s revenue includes fees based on assets in Index Linked Investments. Information can be found in MSCI Inc.'s company filings on the Investor Relations section of www.msci.com.

MSCI ESG Research LLC is a Registered Investment Adviser under the Investment Advisers Act of 1940 and a subsidiary of MSCI Inc. Except with respect to any applicable products or services from MSCI ESG Research, neither MSCI nor any of its products or services recommends, endorses, approves or otherwise expresses any opinion regarding any issuer, securities, financial products or instruments or trading strategies and MSCI's products or services are not intended to constitute investment advice or a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such. Issuers mentioned or included in any MSCI ESG Research materials may include MSCI Inc., clients of MSCI or suppliers to MSCI, and may also purchase research or other products or services from MSCI ESG Research.
