

2021 Factor Investing Mid-Year Review Part III: Five Key Takeaways for Investors

Featuring:

Mark Carver, Global Head of Equity Factors and Equity Portfolio Management, MSCI

Mark Carver:

Jenna, thanks very much. Great to see you. Let me begin by just thanking all of our panelists who participated today. All of our experts. I think the most important thing that I reflect on as I review what I heard is that we had a lot of agreement, but equally a lot of disagreement. I think that probably adds incredible value to all of our listeners, where you're getting a diversity of opinion. You're hearing from firms that represent different roles inside of our ecosystem. I think that's critically important. So I want to emphasize how much I appreciated the differences of opinions and the richness of the discussion. But the five key takeaways that I take from what I heard collectively from our team of experts are the following.

First, it's really important to separate the headlines and the noise from what you're trying to achieve as an investor. Raina and Brynn both emphasized how well equity investments have done despite some of the noise that we've heard, first from COVID, then more recently, we're talking a lot about economies reopening potentially with inflation. But despite that, equities have done really well and investors who stayed the course were very well rewarded. But interestingly, all of the panelists noted how we've seen an incredible rotation across the things that were driving equity markets, and particularly starting with the Pfizer vaccine announcement on November 9th. We saw this big shift from growth and momentum strategies, and instead to value. We saw the best six months of performance for value strategies that we've seen since the financial crisis. The real takeaway there is, separate the fact from the fiction and understand what's happening behind the headlines, and understand that factors in markets in general will be cyclical and there will be some rotation.

The second big thing that I think I heard today, and I thought was a very important insight, was this idea of knowing your exposure. But it's very important to understand the things that are driving the risk and the return inside your portfolio. Many of our experts today use this expression, and they seem to have a strong agreement in the importance of knowing the exposures of your portfolio. Of course, a lot of investors think about this only their asset allocation mix, stocks, bonds, cash, maybe some of the things that they have within their stock or bond mix. But rather instead, go a level deeper, and this is where factors come in. What factors do you have that make up your equity mix? Where did those factors come from?

Are those consistent with your investment beliefs and with your overall objections? Because at the end of the day, it's these style dimensions, the factors, as we call them at MSCI that will ultimately influence the risk and return behavior of your portfolio.

The third thing, and maybe complimentary to knowing your exposure, is understanding the way those exposures and particularly the style dimensions will interact with one another. There again seem to be fairly wide agreement on understanding the correlation of factors. How does value interact with quality, or momentum, or size, or volatility? All of the panelists use this as a dimension of the way they think about building their asset allocation. In fact, I think we heard some really interesting and diverging views as we go a level beneath understanding the interaction, but what you do with that interaction. Dana talked a lot about the use of value and momentum together, and how they can be complimentary and bring in benefits to your portfolio. While Andrew talked about the correlation between value and quality. In fact, that they've been negatively correlated and how that could be beneficial to overall portfolios. Interestingly, there was also this notion by a range of panelists around the importance of managing the risk of portfolios, and how strategies that are more defensive in nature. Minimum volatility was the factor that was mentioned here, could be a very important utility inside of a portfolio.

The fourth thing that I heard from everybody was the importance of doing due diligence. There was a lot of consideration, particularly now as there's more choice around the way investors take exposures between index strategies and active strategies. But it's really important to do the due diligence both on the index or on that active portfolio. Don, he mentioned very emphatically the importance of understanding the definitions of a factor index, for instance. Are those definitions understandable? Are they grounded in economic and academic logic? Compare those definitions across providers, but equally he mentioned how important it is to be able to understand the exposures of active managers. Where do those exposures come from? Are those active managers giving you the factor exposures and the styles that are consistent with your objectives? The reasons you hired those active managers. I thought that was a really important takeaway under the guise of a due diligence.

The final thing that I heard and I thought was a really important takeaway, was this idea, and these are potentially my words, is the idea of staying the course. This goes back to what I said at the beginning, the importance of separating the noise, in this case, it's about staying the course. The panel seem to believe that while there is clear evidence of factors being cyclical, that doesn't necessarily mean that there was agreement that people should be rotating their factor exposures on a very dynamic basis. In fact, I think it was Dana who used the term that the noise will often trump the signal, the signal being whatever dimension, whatever idea you might use to rotate those factors. So that was an important reminder to stay the course.

However, in this notion of staying the course, what I think most of our experts really meant was stay true to your asset allocation in your portfolio objectives. There was an underlying theme that I think is quite interesting in that today, the way we stay the course, the way we stay true to our asset allocation is very different than what it has been in the years past. We've

talked about this notion of asset allocation 3.0 in other Asset TV sessions. This idea is that once upon a time we did stocks, bonds, cash. Then, investors often did asset allocation by looking at geographic over and underweights. But today there's a notion of being even more precise in how you take the exposure if you're underweight or overweight a region, you can still have the decision of how you take that exposure. Bob brought up a really interesting idea when he reflected on the fact that, while the vaccine announcement back in November 9th provided a catalyst for value strategies. The truth is the reason for that was this belief that economies would start to open up as more of the population got vaccinated.

What we know today is that the rollout of the vaccines is very uneven. The US has done a very good job of vaccinating most of the adult population, other countries, other regions have been slower. Why does this matter? What this could do is provide you a level of insight that Bob noted, in terms of the way you play your domestic versus your international exposure. Can you use some of these macro considerations around what's happening in the real world economy to influence your investment decisions in the way you take your asset allocation? So the five key takeaways for me were separate the noise and the headlines from the realities of markets, to know your exposure, to understand the interaction of those exposures, to do your due diligence across your index and your active strategies, and then finally, to think deeply about your portfolio and stay the course, stay true to your ultimate objective.

These are good lessons for all investors. I want to again say thank you very much to the panelists. It was a really great discussion. Thank you so much to Raina and Andrew for setting us up so well with the research dialogue, and appreciate all of you. Of course, thank you to all of you as well for listening. So with that, Jenna, let me turn it back to you.

About MSCI

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 50 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process. To learn more, please visit www.msci.com.

For example (but without limitation), the Information may not be used to create indexes, databases, risk models, analytics, software, or in connection with the issuing, offering, sponsoring, managing or marketing of any securities, portfolios, financial products or other investment vehicles utilizing or based on, linked to, tracking or otherwise derived from the Information or any other MSCI data, information, products or services.

The user of the Information assumes the entire risk of any use it may make or permit to be made of the Information. NONE OF THE INFORMATION PROVIDERS MAKES ANY EXPRESS OR IMPLIED WARRANTIES OR REPRESENTATIONS WITH RESPECT TO THE INFORMATION (OR THE RESULTS TO BE OBTAINED BY THE USE THEREOF), AND TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, EACH INFORMATION PROVIDER EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES (INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF ORIGINALITY, ACCURACY, TIMELINESS, NON-INFRINGEMENT, COMPLETENESS, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE) WITH RESPECT TO ANY OF THE INFORMATION.

Without limiting any of the foregoing and to the maximum extent permitted by applicable law, in no event shall any Information Provider have any liability regarding any of the Information for any direct, indirect, special, punitive, consequential (including lost profits) or any other damages even if notified of the possibility of such damages. The foregoing shall not exclude or limit any liability that may not be applicable law be excluded or limited, including without limitation (as applicable), any liability for death or personal injury to the extent that such injury results from the negligence or willful default of itself, its servants, agents or sub-contractors.

Information containing any historical information, data or analysis should not be taken as an indication or guarantee of any future performance, analysis, forecast or prediction. Past performance does not guarantee future results.

The Information should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. All Information is impersonal and not tailored to the needs of any person, entity or group of persons.

None of the Information constitutes an offer to sell (or a solicitation of an offer to buy), any security, financial product or other investment vehicle or any trading strategy.

It is not possible to invest directly in an index. Exposure to an asset class or trading strategy or other category represented by an index is only available through third party investable instruments (if any) based on that index. MSCI does not issue, sponsor, endorse, market, offer, review or otherwise express any opinion regarding any fund, ETF, derivative or other security, investment, financial product or trading strategy that is based on, linked to or seeks to provide an investment return related to the performance of any MSCI index (collectively, "Index Linked Investments"). MSCI makes no assurance that any Index Linked Investments will accurately track index performance or provide positive investment returns. MSCI Inc. is not an investment adviser or fiduciary and MSCI makes no representation regarding the advisability of investing in any Index Linked Investments.

Index returns do not represent the results of actual trading of investable assets/securities. MSCI maintains and calculates indexes, but does not manage actual assets. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the index or Index Linked Investments. The imposition of these fees and charges would cause the performance of an Index Linked Investment to be different than the MSCI index performance.

The Information may contain back tested data. Back-tested performance is not actual performance, but is hypothetical. There are frequently material differences between back tested performance results and actual results subsequently achieved by any investment strategy.

Constituents of MSCI equity indexes are listed companies, which are included in or excluded from the indexes according to the application of the relevant index methodologies. Accordingly, constituents in MSCI equity indexes may include MSCI Inc., clients of MSCI or suppliers to MSCI. Inclusion of a security within an MSCI index is not a recommendation by MSCI to buy, sell, or hold such security, nor is it considered to be investment advice.

Data and information produced by various affiliates of MSCI Inc., including MSCI ESG Research LLC and Barra LLC, may be used in calculating certain MSCI indexes. More information can be found in the relevant index methodologies on www.msci.com.

MSCI receives compensation in connection with licensing its indexes to third parties. MSCI Inc.'s revenue includes fees based on assets in Index Linked Investments. Information can be found in MSCI Inc.'s company filings on the Investor Relations section of www.msci.com.

MSCI ESG Research LLC is a Registered Investment Adviser under the Investment Advisers Act of 1940 and a subsidiary of MSCI Inc. Except with respect to any applicable products or services from MSCI ESG Research, neither MSCI nor any of its products or services recommends, endorses, approves or otherwise expresses any opinion regarding any issuer, securities, financial products or instruments or trading strategies and MSCI's products or services are not intended to constitute investment advice or a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such. Issuers mentioned or included in any MSCI ESG Research materials may include MSCI Inc., clients of MSCI or suppliers to MSCI, and may also purchase research or other products or services from MSCI ESG Research. MSCI ESG Research materials, including materials utilized in any MSCI ESG Indexes or other products, have not been submitted to, nor received approval from, the United States Securities and Exchange Commission or any other regulatory body.
