

Potential Enhancements to the MSCI Quality Indexes Methodology

PROPOSAL FOR CONSULTATION

June 2024

This consultation may or may not lead to the implementation of any or all of the proposed changes in the highlighted or any other MSCI indexes. Consultation feedback will remain confidential. MSCI may publicly disclose feedback if specifically requested by specific market participants. In that case, the relevant feedback would be published together with the final result of the consultation.

Enhancing MSCI Single Factor Indexes - Roadmap

- Single factor indexes are constructed to achieve a high, stable level of exposure to a single target factor and low exposure to all other factors, but they can also benefit from new data and/or alternative portfolio construction techniques and rebalancing frequencies.
- We aim to consult on specific proposals in due course for other single factor index methodologies including MSCI Momentum Indexes, MSCI Enhanced Value Indexes, MSCI Minimum Volatility Indexes and MSCI High Dividend Yield Indexes. MSCI welcomes views and feedback on the existing methodologies from the investment community on these topics.
- This document focuses on potential enhancement to the MSCI Quality Indexes Methodology and seeks to encourage dialogue and feedback from relevant stakeholders.

Agenda

1 Quality Indexes: Background and Objective

2 Proposed Enhancements

i Rebalance Frequency; Missing Data Handling

ii Factor Selection; Factor Weighting

3 Discussion Points

4 Appendix

MSCI Quality Indexes : Background

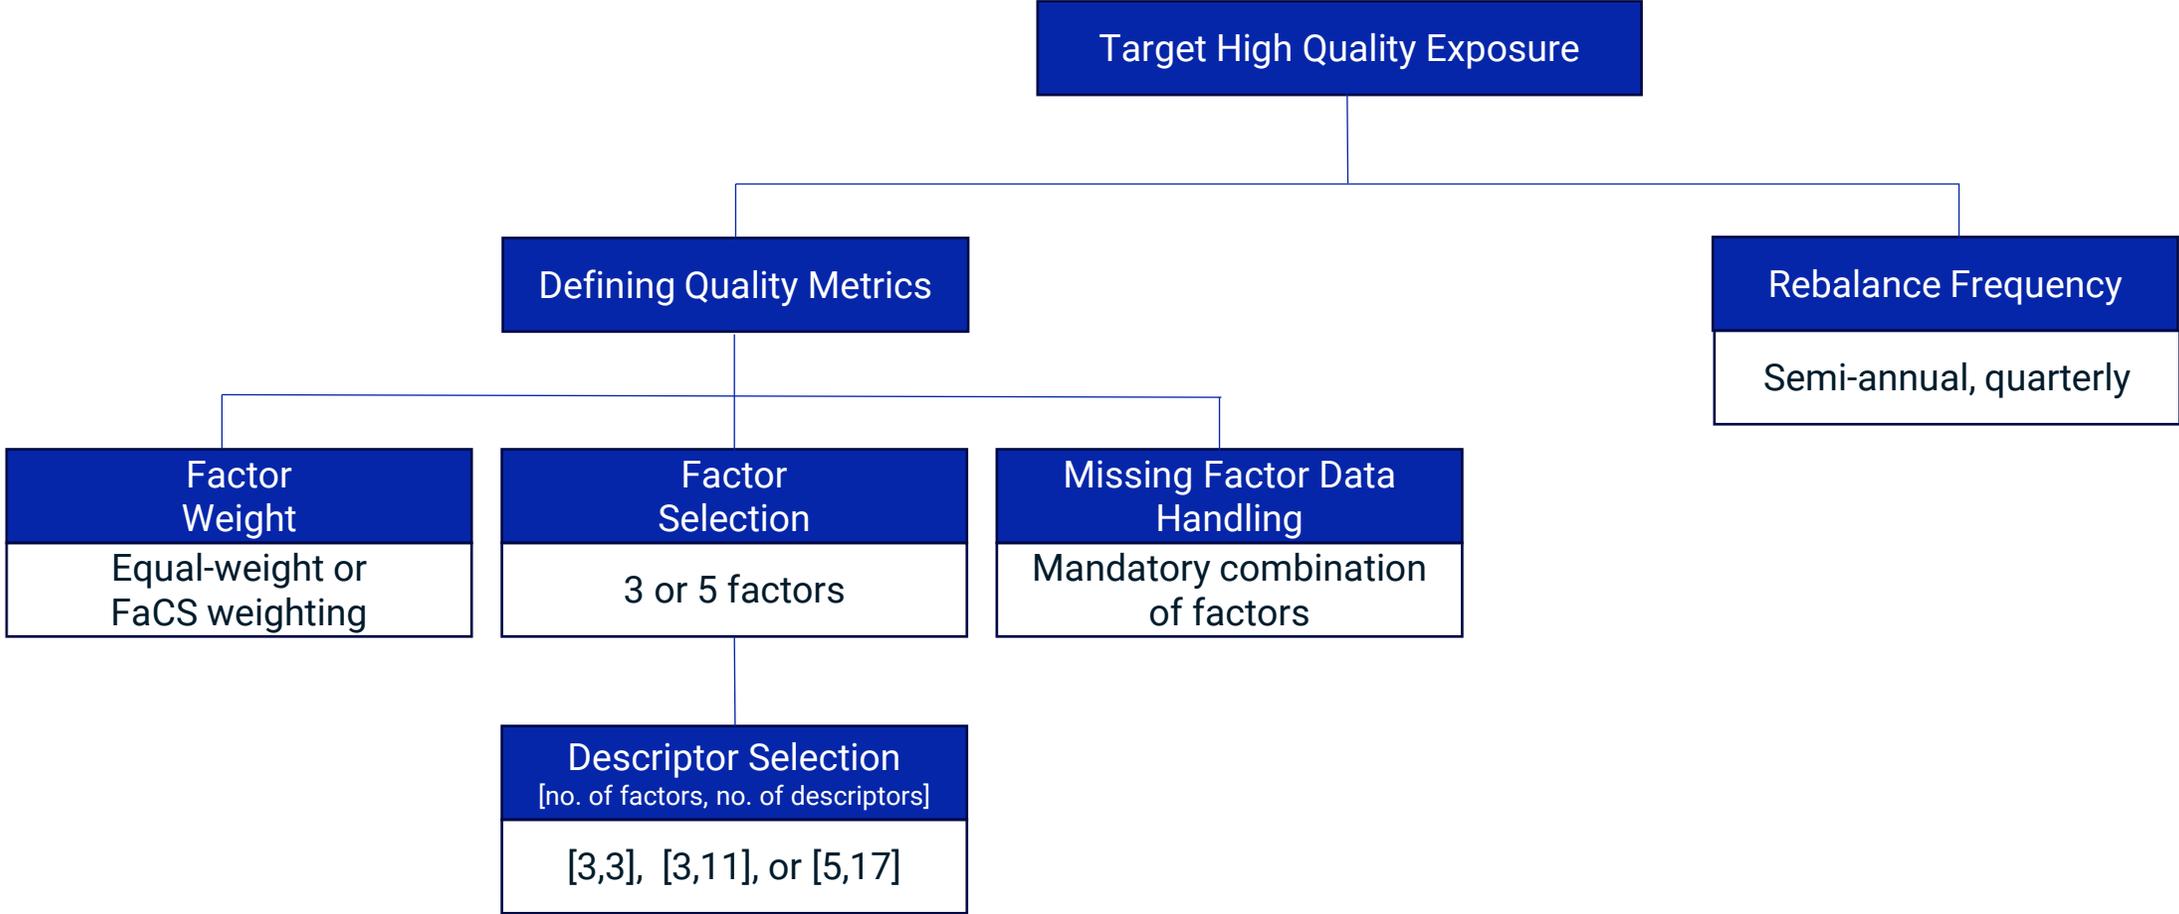

- The MSCI Quality Indexes aim to reflect the performance of companies that have relatively high exposure to the Quality factor. Constituents of MSCI Quality Indexes have historically exhibited positive active exposures to the Quality factors.
- Current methodology defines Quality factor based on individual fundamental ratios representing three pillars of Quality i.e., Profitability, Financial Leverage and Earnings Variability.
- Since the initial launch of MSCI Quality Indexes methodology, new research has identified additional descriptors for the original pillars as well as new dimensions to the definition of Quality e.g., Investment Quality and Earnings Quality etc.

MSCI Quality Indexes : Consultation Objectives

Objective of the consultation is to seek feedback from the market participants on the following:

- More frequent (quarterly) rebalancing, i.e., align the rebalancing calendar with Quarterly Comprehensive Index Reviews of the underlying MSCI GIMI parent indexes allowing reflection of the most recent information
- Handling of input data to mitigate cases of potential reverse turnover due to a lag in availability of data
- Review the weighting of descriptors in the Quality factor definition taking into consideration the historical factor returns and information ratios i.e., align them with weighting in MSCI FaCS methodology*
- Review the choice of descriptors to represent different pillars of Quality factor
- Seek feedback on mitigation of potential concentration by capping exposure to Issuers, Sectors and Countries

MSCI Quality Indexes : Considerations

MSCI Quality Indexes : Considerations Rationale

Category	Description	Rationale	Current Methodology
Missing Factor Data Handling*	Availability of Return-on-Equity and Debt-to-Equity as a mandatory requirement for eligibility	Helps in mitigating cases of potential reverse turnover due to a lag in availability of data	Return-on-Equity is mandatory along with either Debt-to-Equity or Earnings Variability
Rebalance Frequency	Quarterly rebalancing	In line with MSCI GIMI Quarterly Comprehensive Index Review (QCIR) rebalance frequency and allows to reflect more recent information	Semi-annual rebalancing
Factor Weight	MSCI FaCS Weighting to compute Quality factor signal	Assigns weights to the descriptors of the Quality factor group, by emphasizing on historical factor returns and information ratios	Equal weighted
Factor & Descriptor Selection	Quality Score based on 3 factors , or 5 factors as represented in MSCI's GEMLT equity risk model	Enrich definition of the selected factors - For 3 pillars, total 11 descriptors: Profitability (#4), Leverage (#3) and Earnings Variability (#4) For 5 pillars, total 17 descriptors: Profitability (#4), Leverage (#3), Earnings Variability (#4), Investment Quality (#3) and Earnings Quality (#3)	Quality Score based on single fundamental ratios representing each pillar

* Not applicable for Quality factor definition based on GEMLT descriptors

GEMLT Quality Factors and MSCI FaCS Weighting

- MSCI FaCS methodology[#] is a classification standard and framework for analyzing and reporting style factors in equity portfolios.
- The standard is based on the factor structure in GEMLT Model.
- MSCI FaCS methodology assigns weights to factors in the quality factor group, by putting an emphasis on historical factor returns and information ratios (IRs).

Factor	Descriptors	Annual Return(%)*	Annual Volatility (%)*	IR*	Weight in Quality GEMLT 3 Factors	Weight in Quality GEMLT 5 Factors
Profitability	Asset Turnover (25%), Gross Profitability (25%), Gross Profit Margin (25%) and Return on Assets (25%)	0.98	0.97	1.00	50.0%	25.0%
Leverage	Market Leverage (30%), Book Leverage (30%) and Debt-to-Assets (40%)	-0.11	0.88	-0.12	25.0%	12.5%
Earnings Variability	Variability in Sales (20%), Variability in Earnings (25%), Variability in Cash-Flows (20%) and Standard Deviation of Analyst Predicted Earnings-to-Price (35%)	-0.76	0.93	-0.82	25.0%	12.5%
Earnings Quality	Accruals – Balance Sheet (40%), Accruals – Cash Flow (30%) and Cash Earnings to Earnings (30%)	0.71	0.71	0.99	--	25.0%
Investment Quality	Total Assets Growth Rate (40%), Issuance Growth (40%) and Capital Expenditure Growth (20%)	0.91	0.87	1.05	--	25.0%

Proposed Methodology Enhancements

Option 1 (Recommended):

- Rebalance frequency: Quarterly
- Definition of Quality factor based on GEMLT 3 factors (Profitability, Leverage and Earnings Variability)
- Quality score calculation: 50% Profitability, 25% Leverage and 25% Earnings Variability

Option 2:

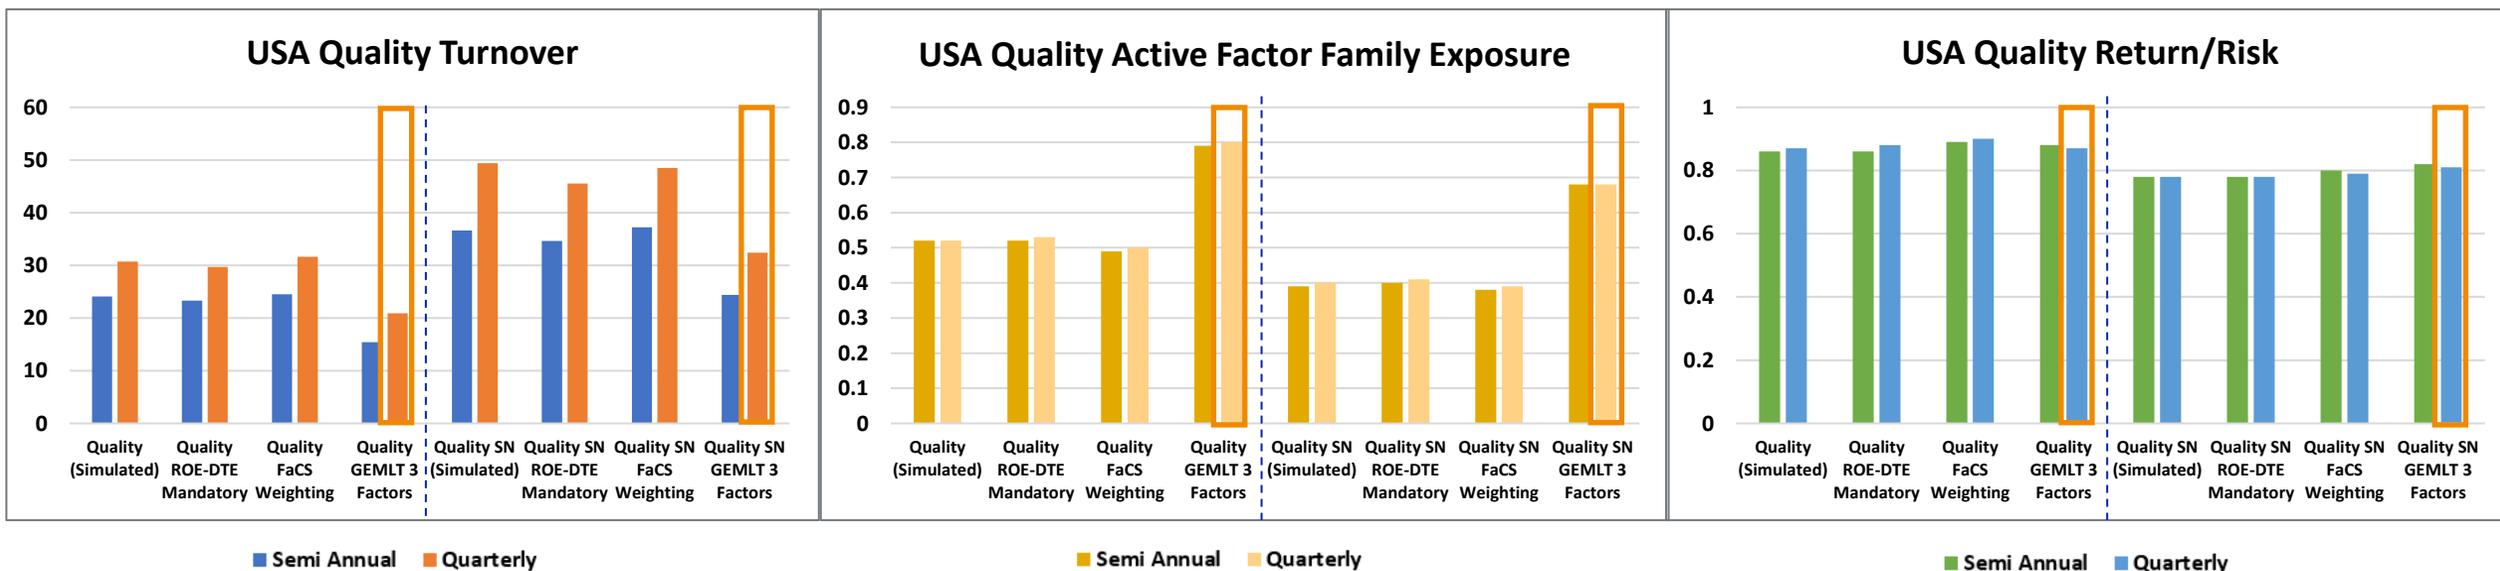

- Rebalance frequency: Quarterly
- Definition of Quality factor unchanged based on Return-on-Equity (ROE), Debt-to-Equity (D/E), Earnings Variability but with both ROE and D/E as mandatory descriptors

Rebalancing Frequency and Data handling

- Below plots exhibit historical turnover, exposure to Quality factor and performance of three simulated indexes compared with indexes using existing methodology:
 - 'ROE-DTE Mandatory': Simulated variant with mandatory condition for availability of Return-on-Equity and Debt-to-Equity, and
 - 'FaCS Weighting': Simulated variant where Quality factor signal is calculated using normalized MSCI FaCS weighting, along with Return-on-Equity and Debt-to-Equity being mandatory
 - 'GEMLT 3 Factors': Simulated variant where Quality factor signal is computed with 3 GEMLT Factors with normalized MSCI FaCS weighting

The proposed simulation "GEMLT 3 Factors" has similar Quarterly turnover as that of the current semi-annual Quality Index but with an improvement in the factor exposure.

Making Return-on-Equity and Debt-to-Equity mandatory did not have an impact on the historical performance and other characteristics like Quality factor exposures, Turnover etc. but helped mitigate potential cases of reverse turnover

Period: May 30, 2003 to Mar 29, 2024. * Annualized one-way index turnover over index reviews ** Active exposures are w.r.t respective MSCI market cap benchmark indexes. 'Quality (Simulated)' and 'Quality SN (Simulated)' variants are the existing methodologies simulated for comparison with enhancement proposals.

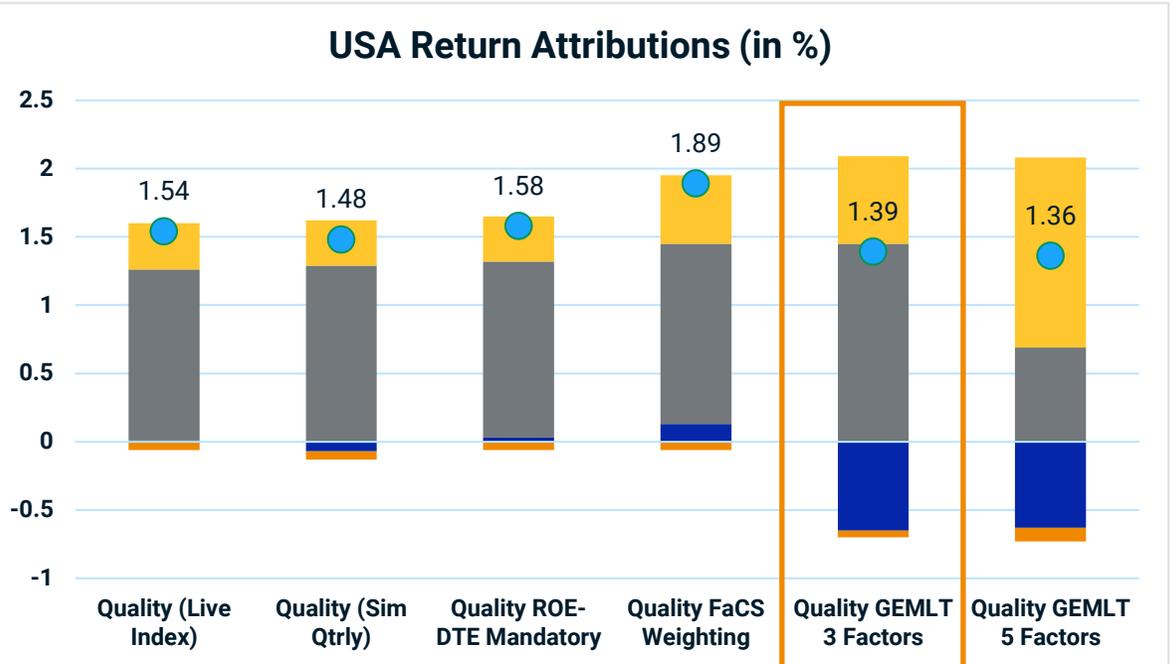

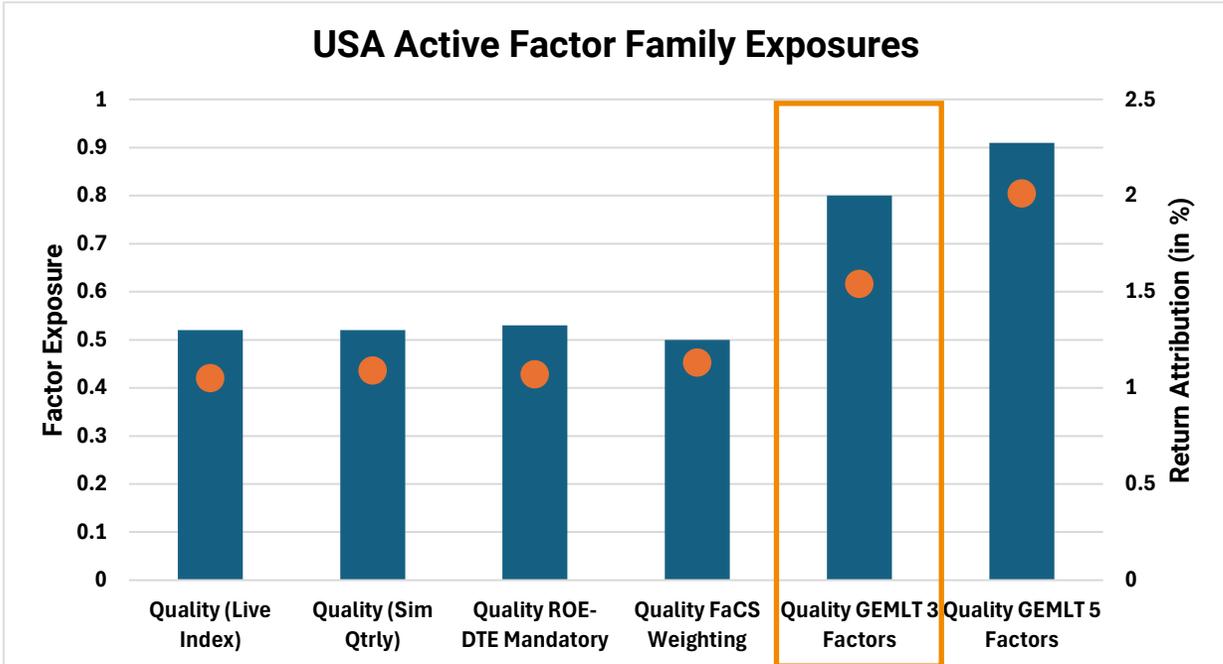

This analysis uses historical back-tested or simulated data. Such performance data is not indicative of future performance, which may differ materially. Please refer to the disclosures at the end of this presentation for more information.

FaCS weighting and GEMLT factors

Quality factor exposure and active return attribution to Quality factor increased significantly in the "Quality GEMLT 3 Factors" compared to the current Quality index.

The style factor active returns increased in the "Quality GEMLT 3 Factors" compared to the current Quality index. This increase was offset by negative active returns from the specific component.

Period: May 30, 2003 to Mar 29, 2024. Active measures are w.r.t respective MSCI market cap benchmark indexes. Active returns are Gross returns annualized in USD.

■ Quality Active Factor Family Exposure ● Quality Factors Return Attri. (%)

■ Specific Return Attribution (%) ■ Countries Return Attribution (%) ■ Industries Return Attribution (%)
 ■ Styles Return Attribution (%) ● Active Return (%)

Note: The Factor Family exposures are calculated using the GEMLT Model. This includes 25% weightage to Profitability, Investment Quality and Earnings Quality each, while 12.5% weightage to Earnings Variability and Leverage each. These weightages align to the simulations of 'Quality GEMLT 5 Factors' and 'Quality GEMLT SN 5 Factors'. Quality (Live Index) is an existing live Index (semi-annual rebalance frequency). Quality (Sim Qtrly) is an existing methodology simulated for comparison but with quarterly rebalance frequency. All other, simulated Indexes follow quarterly rebalance frequency.

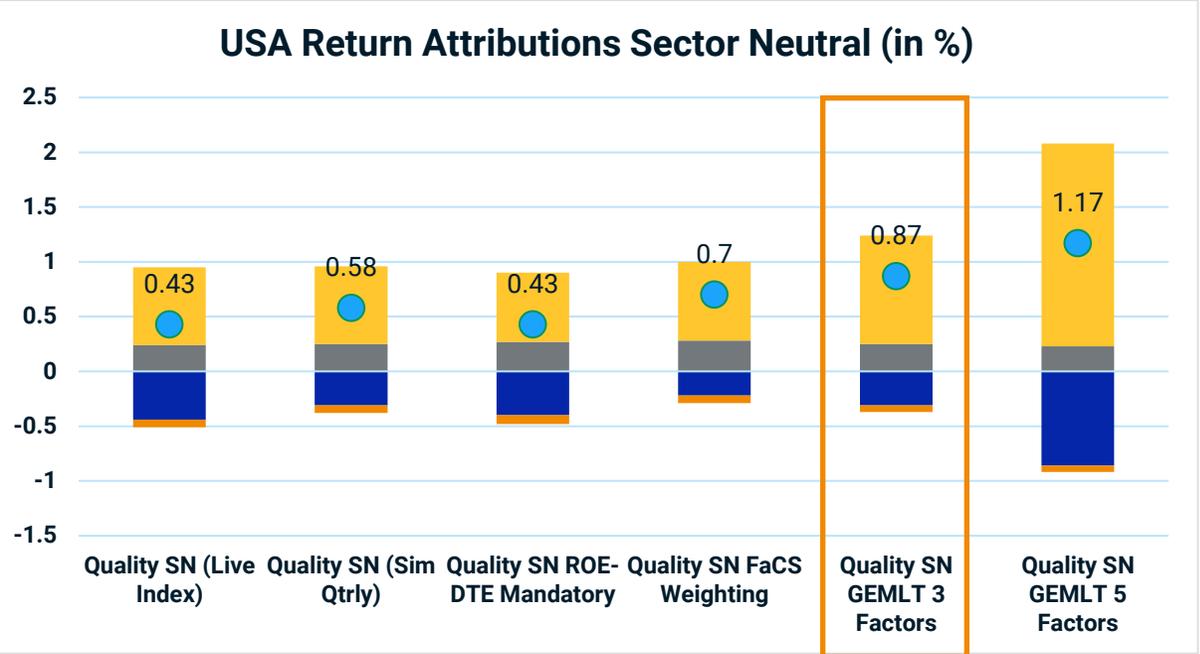

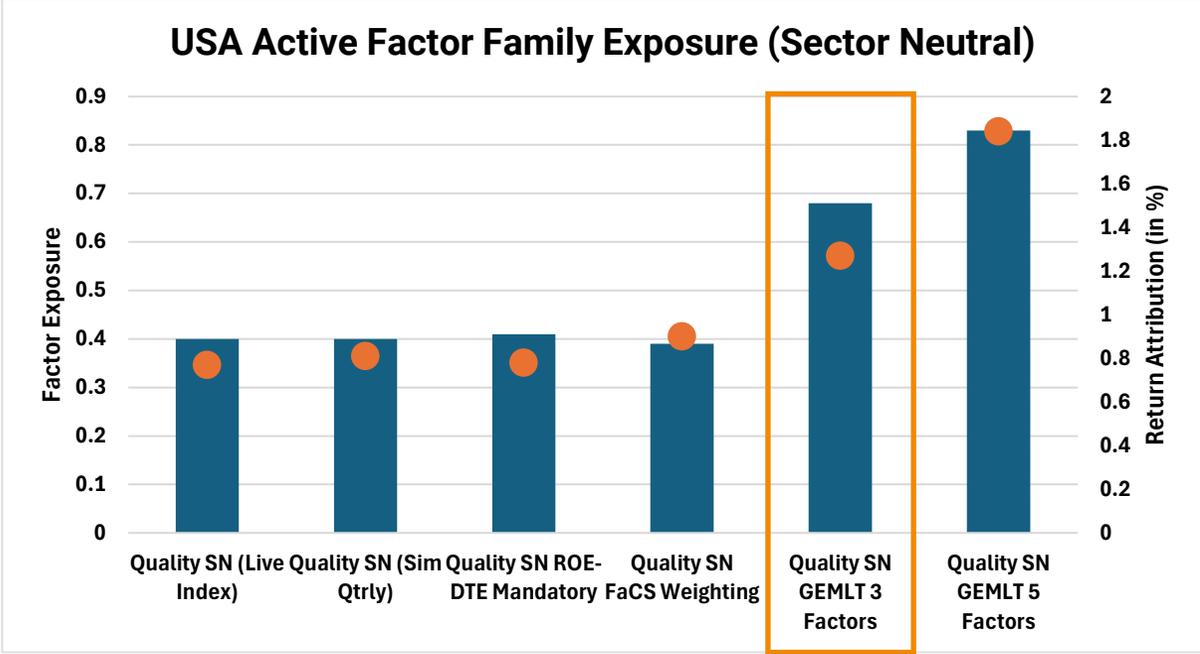

This analysis uses historical back-tested or simulated data. Such performance data is not indicative of future performance, which may differ materially. Please refer to the disclosures at the end of this presentation for more information.

Similar characteristics observed for the Sector Neutral variant

Quality factor exposure and active return attribution from Quality factor increased significantly in the "Quality SN GEMLT 3 Factors" compared to the current Quality index.

The style factor active returns increased in the "Quality SN GEMLT 3 Factors" compared to the current Quality index.

Period: May 30, 2003 to Mar 29, 2024. Active measures are w.r.t respective MSCI market cap benchmark indexes. Active returns are Gross returns annualized in USD.

■ Quality Active Factor Family Exposure ● Quality Factors Return Attri. (%)

■ Specific Return Attribution (%) ■ Countries Return Attribution (%) ■ Industries Return Attribution (%)
 ■ Styles Return Attribution (%) ● Active Return (%)

Note: The Factor Family exposures are calculated using the GEMLT Model. This includes 25% weightage to Profitability, Investment Quality and Earnings Quality each, while 12.5% weightage to Earnings Variability and Leverage each. These weightages align to the simulations of 'Quality GEMLT 5 Factors' and 'Quality GEMLT SN 5 Factors'. Quality SN (Live Index) is an existing live Index (semi-annual rebalance frequency). Quality SN (Sim Qtrly) is an existing methodology simulated for comparison but with quarterly rebalance frequency. All other, simulated Indexes follow quarterly rebalance frequency.

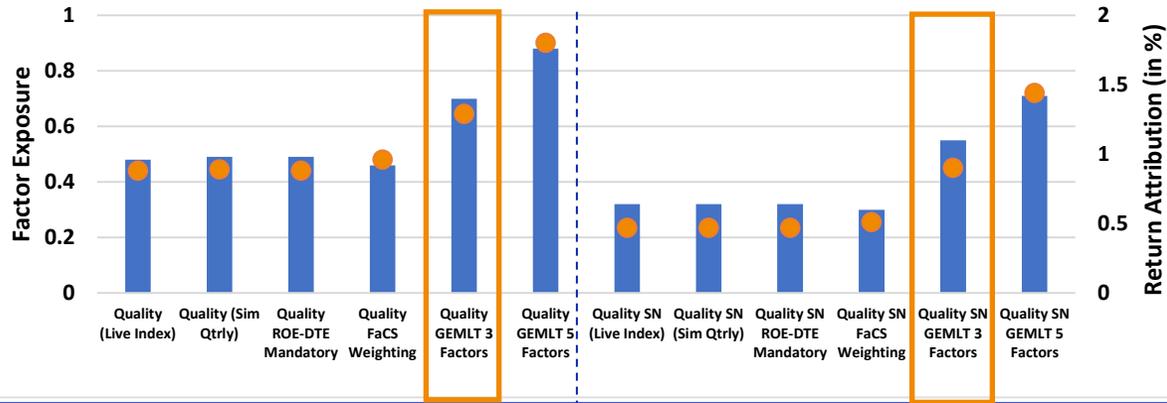

This analysis uses historical back-tested or simulated data. Such performance data is not indicative of future performance, which may differ materially. Please refer to the disclosures at the end of this presentation for more information.

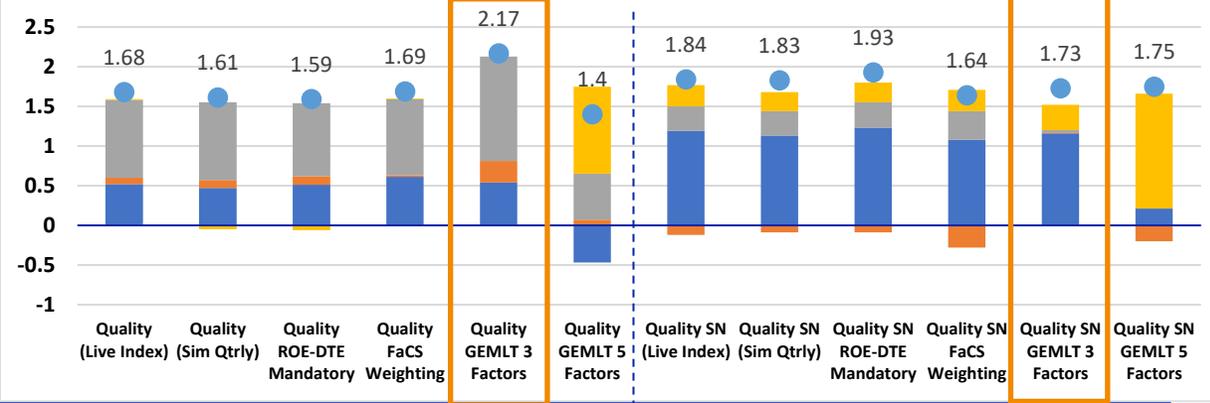

Summary – World ex USA

Increased Quality factor exposure, increased active return attribution from Quality factors and similar turnover to current Quality Index were observed for 'GEMLT 3 Factors' variant

World ex USA Active Factor Family Exposure

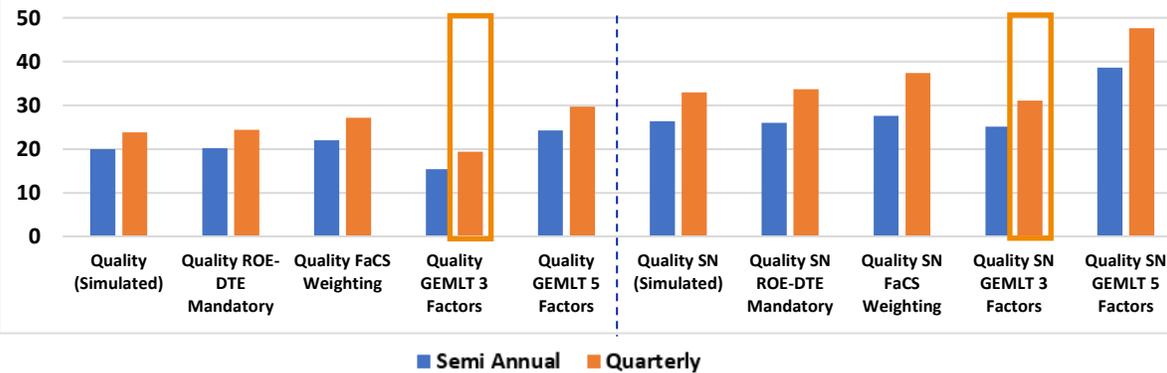

World ex USA Return Attributions (in %)

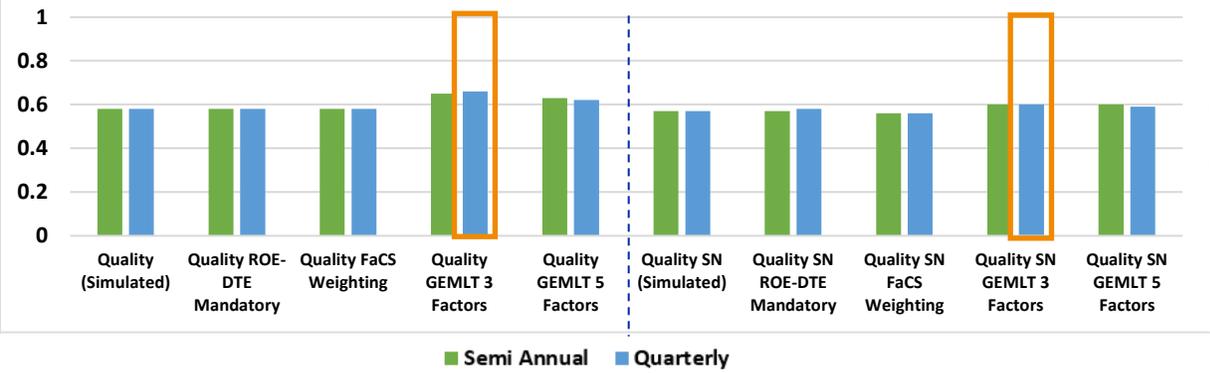

Period: May 30, 2003 to Mar 29, 2024. Active measures are w.r.t respective MSCI market cap benchmark indexes. Active returns are Gross returns annualized in USD.

■ Quality Active Factor Family Exposure ● Quality Factors Return Attri. (%) ■ Specific Ret. Attri. (%) ■ Countries Ret. Attri. (%) ■ Industries Ret. Attri. (%) ■ Styles Ret. Attri. (%) ■ Active Return (%)

World ex USA Quality Turnover

World ex USA Quality Return/Risk

Note: The Factor Family exposures are calculated using the GEMLT Model. This includes 25% weightage to Profitability, Investment Quality and Earnings Quality each, while 12.5% weightage to Earnings Variability and Leverage each. These weightages align to the simulations of 'Quality GEMLT 5 Factors' and 'Quality GEMLT SN 5 Factors'.

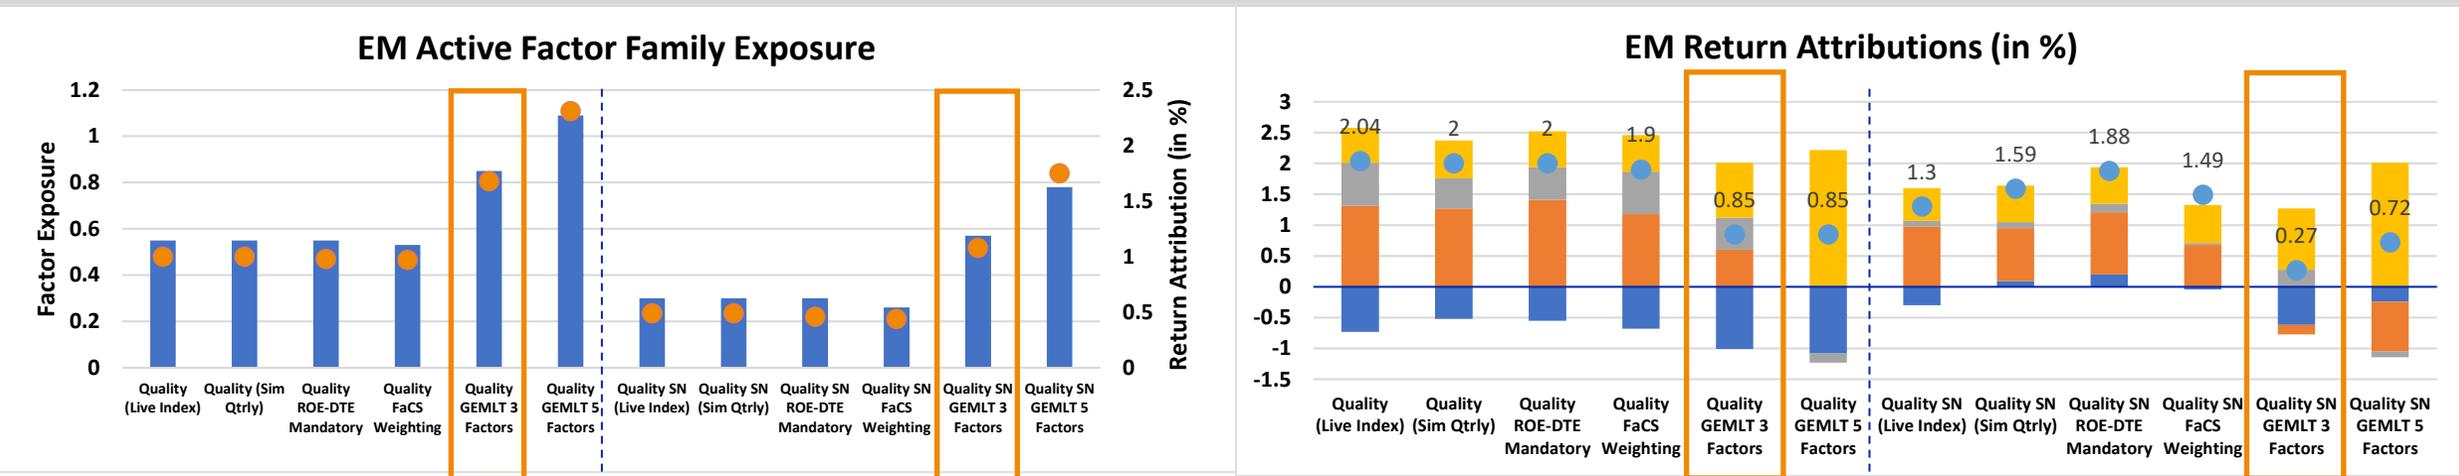

Quality (Live Index) and Quality SN (Live Index) are existing live Indexes (semi-annual rebalance frequency). Quality (Sim Qtrly) and Quality SN (Sim Qtrly) are existing methodology simulated for comparison with quarterly rebalance frequency.

All other, simulated Indexes in Factor Family and Return Attributions plots follow quarterly rebalance frequency.

This analysis uses historical back-tested or simulated data. Such performance data is not indicative of future performance, which may differ materially. Please refer to the disclosures at the end of this presentation for more information.

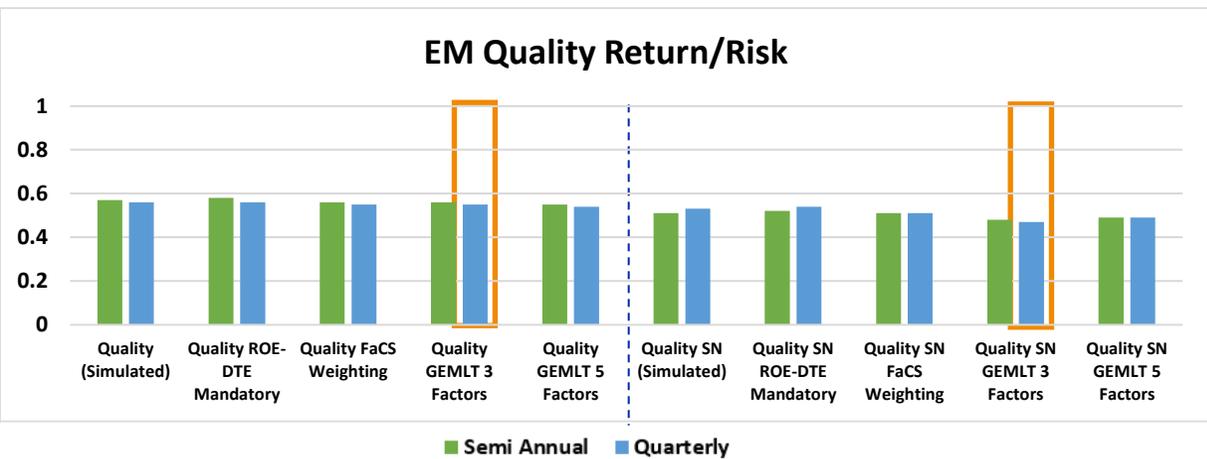

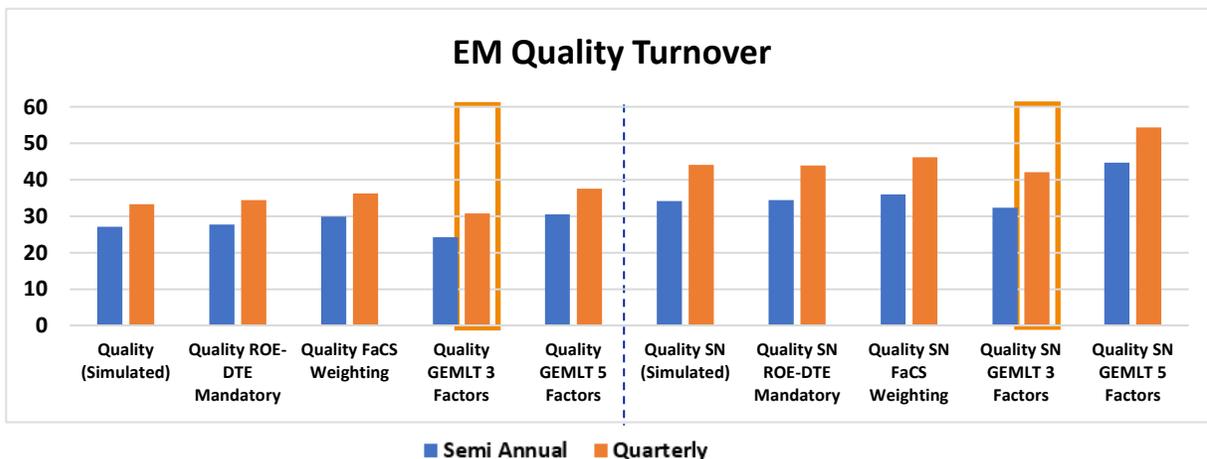

Summary – Emerging Markets (EM)

Increased Quality factor exposure, increased active return attribution from Quality factors, marginally higher turnover to current Quality Index and marginally lower risk adjusted performance were observed for 'GEMLT 3 Factors' variant

Period: May 30, 2003 to Mar 29, 2024. Active measures are w.r.t respective MSCI market cap benchmark indexes. Active returns are Gross returns annualized in USD.

■ Quality Active Factor Family Exposure ● Quality Factors Return Attri. (%) ■ Specific Ret. Attri. (%) ■ Countries Ret. Attri. (%) ■ Industries Ret. Attri. (%) ■ Styles Ret. Attri. (%) ■ Active Return (%)

Note: The Factor Family exposures are calculated using the GEMLT Model. This includes 25% weightage to Profitability, Investment Quality and Earnings Quality each, while 12.5% weightage to Earnings Variability and Leverage each. These weightages align to the simulations of 'Quality GEMLT 5 Factors' and 'Quality GEMLT SN 5 Factors'.

Quality (Live Index) and Quality SN (Live Index) are existing live Indexes (semi-annual rebalance frequency). Quality (Sim Qtrly) and Quality SN (Sim Qtrly) are existing methodology simulated for comparison with quarterly rebalance frequency.

All other, simulated Indexes in Factor Family and Return Attributions plots follow quarterly rebalance frequency. This analysis uses historical back-tested or simulated data. Such performance data is not indicative of future performance, which may differ materially. Please refer to the disclosures at the end of this presentation for more information.

Discussion Points

Discussion Points

Data Handling –

- Do you agree that the below technical enhancement helps in mitigating cases of potential reverse turnover without significantly impacting other index characteristics?
 - Making both Return-on-Equity (ROE) and Debt-to-Equity(D/E) as mandatory descriptors for the eligibility of selection

Rebalancing Frequency –

- Should Quarterly rebalancing be implemented given the trade-off between timely reflection of changing company attributes and incremental turnover?

FaCS Weighting –

- Do you think the change in weights of the descriptors in quality score to align with MSCI FaCS Methodology reflect balanced weight allocation to the pillars of Quality factor?
 - For 3 factor quality score definition, this adjustment will increase the weight of ROE / Profitability measure to 50% and reduce the weight of D/E (Leverage) and Earnings Variability measures to 25% each, from the current equal weighting of all the 3 factors.

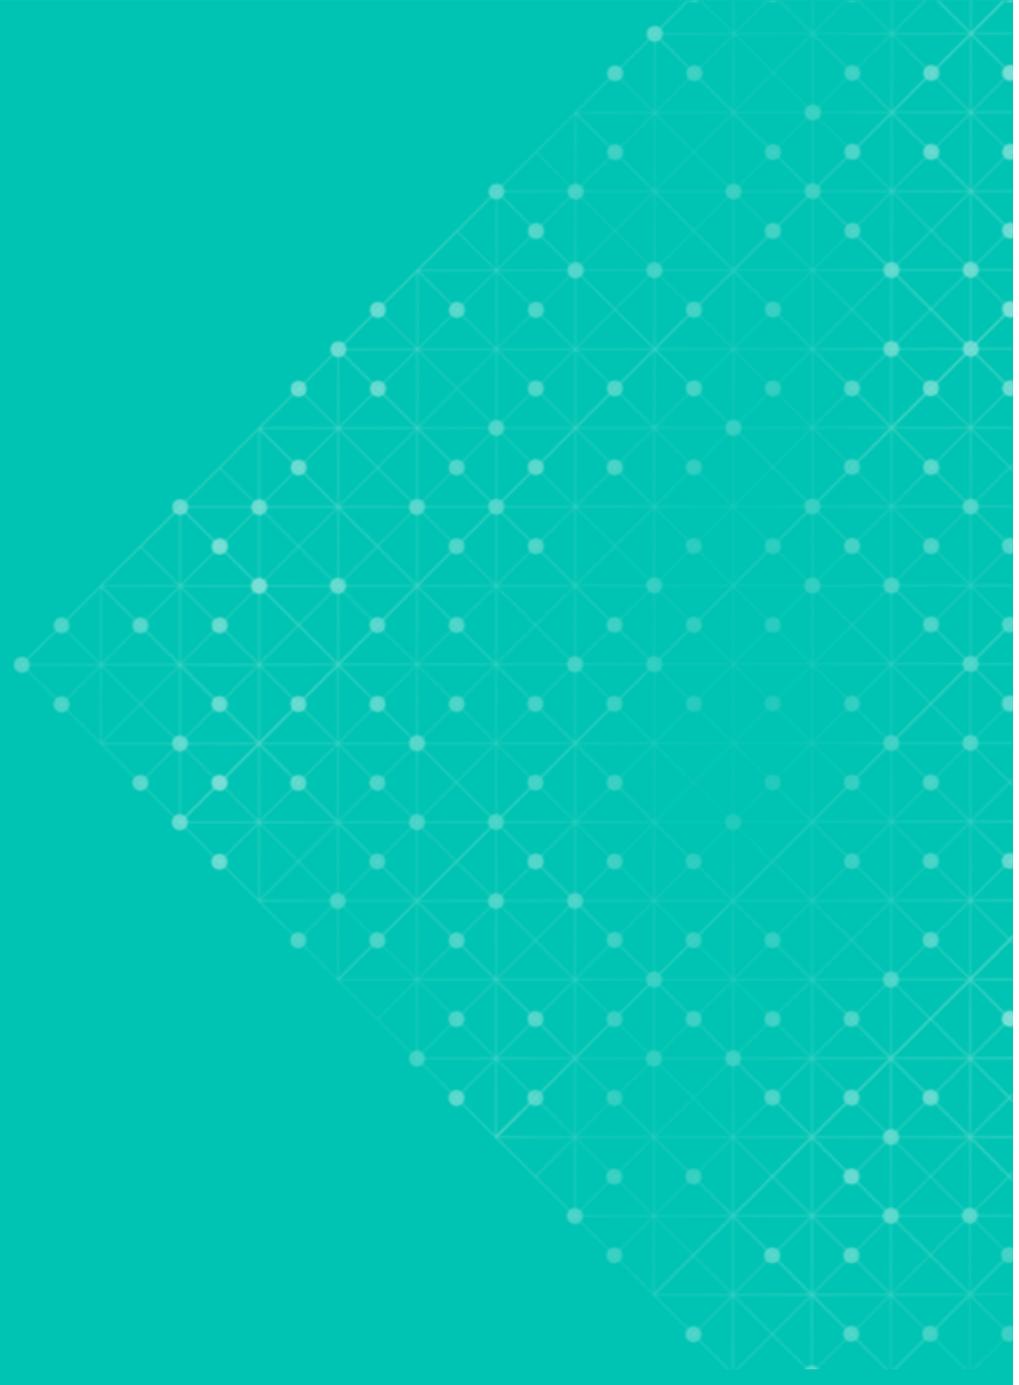

Factor Definition –

- Do you think the Quality factor definition based on 3 pillars could be enriched by incorporating descriptors from the GEMLT model?

Additional Discussion Points

- Should MSCI consider enhancing the Quality factor definition further by adding Investment Quality and Earnings Quality to the current definition based on three pillars?
- Should MSCI consider applying bounds on sector weights and country weights?
 - If yes, does +/-5% active weight to Sectors and Countries seem reasonable?
- Should MSCI enhance the current issuer cap bound of 5% to max(5%, issuer weight in the Parent index) to be in sync with the relative constituent weights in the underlying parent index?

Appendix

Applicability of Consultation Proposals to Standard MSCI Index Methodologies

Index Methodologies
MSCI Quality Indexes
MSCI Quality Tilt Indexes
MSCI Sector Neutral Quality Indexes
MSCI High Dividend Yield Indexes
MSCI Governance Quality Indexes
MSCI Japan Human and Physical Investment Index
MSCI Prime Value Indexes

In addition, index methodologies that use MSCI Quality Indexes as one of the component index or use existing MSCI Quality Index as an underlying index are also applicable for consultation proposal. For e.g., MSCI Diversified Factor Mix Indexes, MSCI Factor Mix-A Series Indexes, MSCI Adaptive Multiple-Factor Indexes, MSCI Hedged Indexes.

Transition Analysis

	USA Quality				USA Sector Neutral Quality			
	Quality (Live Index)	Quality ROE-DTE Mandatory	Quality FaCS Weighting	Quality GEMLT 3 Factors	Quality (Live Index)	Quality ROE-DTE Mandatory	Quality FaCS Weighting	Quality GEMLT 3 Factors
One-way Turnover	9.3%	9.3%	17.6%	23.6%	13.8%	12.0%	22.1%	32.9%

	World ex USA Quality				World ex USA Sector Neutral Quality

Transition simulation during Dec-23 Index Review

One-way Turnover includes changes from Index Review and transition turnover from current (Live) Quality Index

This analysis uses historical back-tested or simulated data. Such performance data is not indicative of future performance, which may differ materially. Please refer to the disclosures at the end of this presentation for more information.

Information Classification: GENERAL

Different Pillars of Quality : How are they correlated?

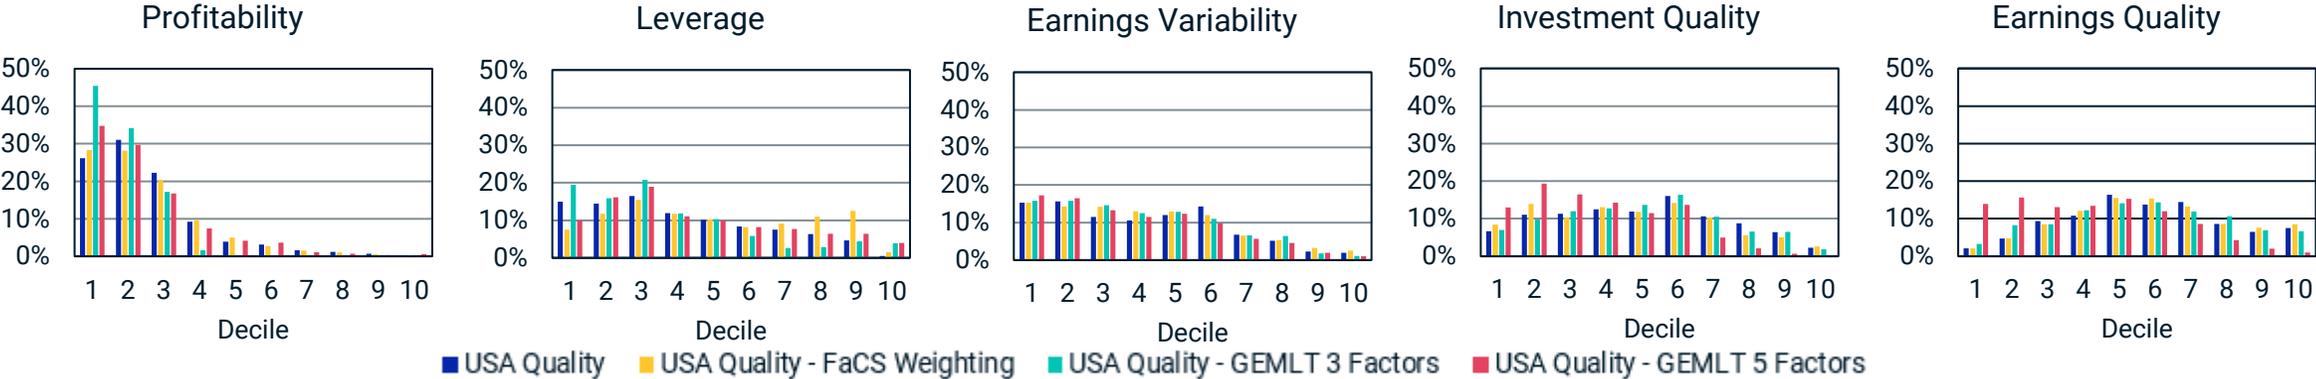

- Correlation among GEMLT 5 quality factors was observed to be less than 30% with other quality factors, including additional factors - Investment Quality and Earnings Quality factors.

Factor Correlation for MSCI USA Index

	Investment Quality	Profitability	Earnings Quality	Earnings Variability	Leverage	Momentum	Value	Growth
Investment Quality	1.00							
Profitability	0.13	1.00						
Earnings Quality	-0.04	0.01	1.00					
Earnings Variability	0.29	0.20	-0.23	1.00				
Leverage	-0.09	0.20	-0.23	0.04	1.00			
Momentum	0.03	0.12	-0.04	0.08	0.06	1.00		
Value	0.18	-0.21	-0.11	0.03	0.02	-0.23	1.00	
Growth	-0.24	0.26	-0.03	-0.21	0.20	0.18	-0.30	1.00

Median values calculated over simulated period from Jun 2003 to Mar 2024

- Weights distribution across deciles:

- Most of the stock selection was observed to be done from top deciles of the Profitability factor
- For 'Quality GEMLT 5 Factors', securities were observed to be selected from top deciles of the Earnings Quality and Investment Quality as well, as these are also targeted factors in the Quality Score calculation

Note: The decile calculation is based on the GEMLT Z-Scores of all constituents of the MSCI USA Index. Top decile (#1) has the highest factor scores i.e., highest Profitability, lowest Leverage, lowest Earnings Variability, highest Investment Quality and highest Earnings Quality. The plot compares the weight distribution of selected securities across these deciles of USA Quality, USA Quality FaCS Weighting, USA Quality GEMLT 3 Factors and USA Quality GEMLT 5 Factors. This analysis uses historical back-tested or simulated data. Such performance data is not indicative of future performance, which may differ materially. Please refer to the disclosures at the end of this presentation for more information.

Data Handling Example

Background

- During the May 2023 Index Review, Home Depot was deleted from the MSCI USA Quality Index and MSCI USA Sector Neutral Quality Index even when it had higher index weight and was added only in the previous rebalance.
 - Home Depot was added in November 2022 due to an extreme high ROE value; it had Debt-to-Equity (D/E) value as Null. Under the current methodology, the Quality score was calculated using Return-on-Equity (ROE) and Earnings Variability only (excluding the Null D/E).
 - For the May 2023 Index Review, Home Depot’s D/E value was populated with a value of 32.2, offsetting a still higher ROE figure and hence significantly dropping the overall Quality score and consequently dropping from the Index.

Reason

- There is inconsistent timing of fundamental data inputs to the Quality score for the MSCI Quality Indexes Methodology since Debt-to-Equity uses latest fiscal year while Return-on-Equity uses latest quarter filing. This causes unwanted additions and subsequent in case book value of equity moves between positive and negative values.
- Making both **Return on Equity and Debt-to-Equity mandatory** would make the data handling in sync and mitigate potential cases of reverse turnover.

Security Name	Date	Weight in MSCI USA Index	Return on Equity Data	Debt-to-Equity Data	Weight in MSCI USA Quality Index	Weight in MSCI USA Sector Neutral Quality Index
Home Depot	June 1 2022	0.86%	--	--	--	--
	Dec 1 2022	0.92%	7172.44	--	5.01%	6.16%
	June 1 2023	0.78%	1092.06	32.24	--	--
	Dec 1 2023	0.78%	1209.51	32.24	--	--
	Jun 3 2024	0.72%	1445.05	50.04	--	--

Information Classification: GENERAL

All simulated Indexes follow quarterly rebalance frequency.

Appendix

Risk and Return Metrics

	Definition
Total Return (%)	Annualized index return
Total Risk (%)	Annualized index risk (based on monthly returns)
Return / Risk	Ratio of annualized return and annualized risk
Active Return (%)	Difference of the annualized index return and the annualized benchmark return
Tracking Error (%)	Annualized standard deviation of active returns (based on monthly data)
Turnover (%)	Annualized Average one-way index turnover over rebalancing dates

About MSCI

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 50 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process. To learn more, please visit www.msci.com.

The process for submitting a formal index complaint can be found on the index regulation page of MSCI's website at: <https://www.msci.com/index-regulation>.

Notice and Disclaimer

This document and all of the information contained in it, including without limitation all text, data, graphs, charts (collectively, the "Information") is the property of MSCI Inc. or its subsidiaries (collectively, "MSCI"), or MSCI's licensors, direct or indirect suppliers or any third party involved in making or compiling any Information (collectively, with MSCI, the "Information Providers") and is provided for informational purposes only. The Information may not be modified, reverse-engineered, reproduced or disseminated in whole or in part without prior written permission from MSCI. All rights in the Information are reserved by MSCI and/or its Information Providers.

The Information may not be used to create derivative works or to verify or correct other data or information. For example (but without limitation), the Information may not be used to create indexes, databases, risk models, analytics, software, or in connection with the issuing, offering, sponsoring, managing or marketing of any securities, portfolios, financial products or other investment vehicles utilizing or based on, linked to, tracking or otherwise derived from the Information or any other MSCI data, information, products or services.

The user of the Information assumes the entire risk of any use it may make or permit to be made of the Information. NONE OF THE INFORMATION PROVIDERS MAKES ANY EXPRESS OR IMPLIED WARRANTIES OR REPRESENTATIONS WITH RESPECT TO THE INFORMATION (OR THE RESULTS TO BE OBTAINED BY THE USE THEREOF), AND TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, EACH INFORMATION PROVIDER EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES (INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF ORIGINALITY, ACCURACY, TIMELINESS, NON-INFRINGEMENT, COMPLETENESS, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE) WITH RESPECT TO ANY OF THE INFORMATION.

Without limiting any of the foregoing and to the maximum extent permitted by applicable law, in no event shall any Information Provider have any liability regarding any of the Information for any direct, indirect, special, punitive, consequential (including lost profits) or any other damages even if notified of the possibility of such damages. The foregoing shall not exclude or limit any liability that may not by applicable law be excluded or limited, including without limitation (as applicable), any liability for death or personal injury to the extent that such injury results from the negligence or willful default of itself, its servants, agents or sub-contractors.

Information containing any historical information, data or analysis should not be taken as an indication or guarantee of any future performance, analysis, forecast or prediction. Past performance does not guarantee future results.

The Information may include "Signals," defined as quantitative attributes or the product of methods or formulas that describe or are derived from calculations using historical data. Neither these Signals nor any description of historical data are intended to provide investment advice or a recommendation to make (or refrain from making) any investment decision or asset allocation and should not be relied upon as such. Signals are inherently backward-looking because of their use of historical data, and they are not intended to predict the future. The relevance, correlations and accuracy of Signals frequently will change materially.

The Information should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. All Information is impersonal and not tailored to the needs of any person, entity or group of persons.

None of the Information constitutes an offer to sell (or a solicitation of an offer to buy), any security, financial product or other investment vehicle or any trading strategy.

It is not possible to invest directly in an index. Exposure to an asset class or trading strategy or other category represented by an index is only available through third party investable instruments (if any) based on that index. MSCI does not issue, sponsor, endorse, market, offer, review or otherwise express any opinion regarding any fund, ETF, derivative or other security, investment, financial product or trading strategy that is based on, linked to or seeks to provide an investment return related to the performance of any MSCI index (collectively, "Index Linked Investments"). MSCI makes no assurance that any Index Linked Investments will accurately track index performance or provide positive investment returns. MSCI Inc. is not an investment adviser or fiduciary and MSCI makes no representation regarding the advisability of investing in any Index Linked Investments.

Index returns do not represent the results of actual trading of investable assets/securities. MSCI maintains and calculates indexes, but does not manage actual assets. The calculation of indexes and index returns may deviate from the stated methodology. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the index or Index Linked Investments. The imposition of these fees and charges would cause the performance of an Index Linked Investment to be different than the MSCI index performance.

The Information may contain back tested data. Back-tested performance is not actual performance, but is hypothetical. There are frequently material differences between back tested performance results and actual results subsequently achieved by any investment strategy.

Constituents of MSCI equity indexes are listed companies, which are included in or excluded from the indexes according to the application of the relevant index methodologies. Accordingly, constituents in MSCI equity indexes may include MSCI Inc., clients of MSCI or suppliers to MSCI. Inclusion of a security within an MSCI index is not a recommendation by MSCI to buy, sell, or hold such security, nor is it considered to be investment advice.

Data and information produced by various affiliates of MSCI Inc., including MSCI ESG Research LLC and Barra LLC, may be used in calculating certain MSCI indexes. More information can be found in the relevant index methodologies on www.msci.com.

MSCI receives compensation in connection with licensing its indexes to third parties. MSCI Inc.'s revenue includes fees based on assets in Index Linked Investments. Information can be found in MSCI Inc.'s company filings on the Investor Relations section of msci.com.

MSCI ESG Research LLC is a Registered Investment Adviser under the Investment Advisers Act of 1940 and a subsidiary of MSCI Inc. Neither MSCI nor any of its products or services recommends, endorses, approves or otherwise expresses any opinion regarding any issuer, securities, financial products or instruments or trading strategies and MSCI's products or services are not a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such, provided that applicable products or services from MSCI ESG Research may constitute investment advice. MSCI ESG Research materials, including materials utilized in any MSCI ESG Indexes or other products, have not been submitted to, nor received approval from, the United States Securities and Exchange Commission or any other regulatory body. MSCI ESG and climate ratings, research and data are produced by MSCI ESG Research LLC, a subsidiary of MSCI Inc. MSCI ESG Indexes, Analytics and Real Estate are products of MSCI Inc. that utilize information from MSCI ESG Research LLC. MSCI Indexes are administered by MSCI Limited (UK) and MSCI Deutschland GmbH.

Please note that the issuers mentioned in MSCI ESG Research materials sometimes have commercial relationships with MSCI ESG Research and/or MSCI Inc. (collectively, "MSCI") and that these relationships create potential conflicts of interest. In some cases, the issuers or their affiliates purchase research or other products or services from one or more MSCI affiliates. In other cases, MSCI ESG Research rates financial products such as mutual funds or ETFs that are managed by MSCI's clients or their affiliates, or are based on MSCI Inc. Indexes. In addition, constituents in MSCI Inc. equity indexes include companies that subscribe to MSCI products or services. In some cases, MSCI clients pay fees based in whole or part on the assets they manage. MSCI ESG Research has taken a number of steps to mitigate potential conflicts of interest and safeguard the integrity and independence of its research and ratings. More information about these conflict mitigation measures is available in our Form ADV, available at <https://adviserinfo.sec.gov/firm/summary/169222>.

Any use of or access to products, services or information of MSCI requires a license from MSCI. MSCI, Barra, RiskMetrics, IPD and other MSCI brands and product names are the trademarks, service marks, or registered trademarks of MSCI or its subsidiaries in the United States and other jurisdictions. The Global Industry Classification Standard (GICS) was developed by and is the exclusive property of MSCI and S&P Global Market Intelligence. "Global Industry Classification Standard (GICS)" is a service mark of MSCI and S&P Global Market Intelligence.

MIFID2/MIFIR notice: MSCI ESG Research LLC does not distribute or act as an intermediary for financial instruments or structured deposits, nor does it deal on its own account, provide execution services for others or manage client accounts. No MSCI ESG Research product or service supports, promotes or is intended to support or promote any such activity. MSCI ESG Research is an independent provider of ESG data.

Privacy notice: For information about how MSCI collects and uses personal data, please refer to our Privacy Notice at <https://www.msci.com/privacy-pledge>.
