*Over rebalance of last 12 months

The MSCI USD Investment Grade Low Risk High Exposure Corporate Bond Index was launched on Dec 16, 2019. Data prior to the launch date is back-tested data (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance – whether actual or back-tested – is no indication or guarantee of future performance.

Index Framework

The MSCI Fixed Income Low Risk Indexes are constructed by using the constituents of an underlying MSCI parent index with the aim of providing an opportunity set with sufficient liquidity and capacity. The Low Risk descriptor for each constituent is computed using bond level descriptor, namely Effective Duration. A Low Risk z-score for each constituent is computed by standardizing the Low Risk descriptor within the parent universe. The z-score is then winsorized at +/- 3. This index is constructed to give a high exposure by selecting subset of constituents within parent index and constructing with a fixed number of securities approach. The MSCI Fixed Income Low Risk Indexes are rebalanced on a quarterly basis, usually as of the close of the last business day of a month.
