

MSCI SignalLab

High-quality signals.
Ready when it matters.

ENTER

In today's data-driven markets, gaining an edge requires more than intuition. It demands unique, actionable signals that you can act on quickly and stand behind with confidence.

Data has never been more abundant, but volume is not the same as value. Many signals available today lack transparent methodology, consistent coverage, or the governance your risk and compliance teams require. The challenge is no longer finding data. It's finding data you can trust.

One platform, signals across various dimensions of return

MSCI SignalLab is a central platform for investment signals across multiple domains - including factors, macro, crowding and more. Each signal is standardized, thoroughly validated and documented. Because no two investment processes are the same, you can compare and use signals that reflect your own views - without building or maintaining the underlying infrastructure.

Access signals at scale

Access multiple signals that drive investment outcomes – all signals are built to the same institutional standard.

Move fast when markets shift

Respond to market events and emerging risks in days, not months. Modular architecture and flexible delivery mean signals are ready when you need them.

Connect to your workflow seamlessly

Access via API and Snowflake - including connectivity to MSCI's broader analytics or index ecosystem when you need it.

What you gain

01

Deploy validated signals in days, not months

With documented methodology and consistent coverage, you can deploy in days. When a dislocation emerges, you are already positioned to act.

02

Defend every signal to your board and allocators

Every signal comes with documented methodology, consistent coverage, and rigorous governance - so you can defend your inputs to your risk team, your board, and your allocators.

03

Invest using signals assembled for your strategy, not the market's

MSCI SignalLab brings together signals across various domains in one place, with the flexibility to build around your process - not a default configuration.

Put signals to work **across your investment process**

Signal and factor research

Decode signal behaviour across regimes

Understand how signals behave across market regimes and how factor trends are shifting.

Portfolio construction

Construct with exposure clarity, not assumptions

Explore signals to identify hidden exposures in your portfolio, so every construction decision starts from a place of clarity. Target the exposures that reflect your thesis and hedge away the ones that don't.

Alpha model creation

Build alpha models that are yours, not repackaged

Access curated, high-quality signals and develop alpha models that are proprietary, not repackaged versions of what every other firm is running.

Stress testing and scenario analysis

Stress test scenarios built around your process

Build sample portfolios and factor universes that form the basis of your stress tests - so scenario analysis reflects your investment process, not a generic model.

What makes our signals different

One platform. Multiple signal domain.

Factors, macro, crowding and much more - all in one place, all standardized and thoroughly validated, all connected to the MSCI research and data infrastructure you already rely on.

Quality you can defend

Every signal is grounded in decades of MSCI factor research, documented and consistent - the kind of standard you can defend.

Why MSCI

50+ years

of factor model research¹
