1 INTRODUCTION

This methodology book provides an exhaustive description of the rules and guidelines followed by MSCI for construction and maintenance of the MSCI Risk Weighted Indexes. While standard MSCI market cap indexes reflect the aggregate holdings of all investors and represent the market return (equity factor or risk premium), many investors are now looking for access to other sources of systematic return (style and strategy factors) that can be captured through indexes with alternative weighting schemes.

The MSCI Risk Weighted Indexes use a simple but effective and transparent process to provide passive exposure to the investable market index equity opportunity set but with lower risk than traditional cap weighted indexes. Each MSCI Risk Weighted index reweights all the constituents of a cap weighted MSCI parent index so that stocks with lower historical return variance are given higher index weights. By emphasizing low volatility stocks in this way, the MSCI Risk Weighted Indexes have historically produced higher return and lower realized volatility compared to their respective parent MSCI indexes, while maintaining reasonable liquidity and capacity. In general, MSCI Risk Weighted Indexes tend to have a bias towards stocks with lower size and lower risk. As a result, MSCI Risk Weighted Indexes provide negative exposure to two underlying systematic factors, the size factor and the volatility factor. The main potential benefits of the MSCI Risk Weighted Indexes include:

- Simple and transparent methodology to achieve lower risk
- Exposure to the entire investable market index universe, no stock selection bias
- Attractive absolute and risk adjusted historical performance
- Defensive characteristics, outperformance during recent crises
- Low concentration risk
- Moderate index turnover

The main potential applications for investors of the MSCI Risk Weighted Indexes include:

- Factor exposure: negative exposure to the size factor and the volatility factor
- Strategic asset allocation: equity market exposure with lower risk
- Tactical asset allocation: downside protection in volatile periods
- Portfolio diversification: combine with other systematic betas
- Investment research: tools to study the characteristics of low risk strategies
- Performance analysis: performance benchmarks for actively managed low risk portfolios

2 INDEX CONSTRUCTION METHODOLOGY

2.1 APPLICABLE UNIVERSE

The applicable universe includes all the existing constituents of MSCI ACWI IMI Index.

2.2 REWEIGHTING INDEX CONSTITUENTS

The MSCI Risk Weighted indexes are rebalanced at a regional level for the calculation of the security level constraint factors. The resulting indexes are then broken down further to construct regional and country sub indexes. The details of the regions are discussed in Appendix I.

All the existing constituents of the MSCI Parent Index are reweighted by their risk weights. The risk weights are derived from the respective security level price variance. The details of the re-weighting scheme are discussed in sections 2.3 and 2.4.

2.3 DETERMINATION OF RISK WEIGHTS

For a given rebalancing date, the security level price index data available until the last Friday preceding this date is used in the construction of the MSCI Risk Weighted indexes.

The security level risk weight is computed as the ratio of the inverse of the security variance to the sum of the inverse of security variance of all constituent securities in the MSCI Parent Index.

$$w_j = \frac{1/\sigma_j^2}{\sum_1^n 1/\sigma_j^2}$$

The security level variance (σ_j^2), used in the above calculation, is the squared term of security level standard deviation (σ_j) computed using weekly returns over three years prior to the rebalancing date. In case the price data are not available for a three year period, the respective country-sector average of volatility is used for that security. In the event of country-sector average being unavailable, country average volatility is used. This aims to avoid estimating risk over different volatility regimes. Security standard deviation is capped at 80% on upside and 12% on downside. Only non-zero weekly returns are considered for computation of variance to deal with stale prices due to suspensions/ market disruptions etc.

The final security level constraint factor is computed as the ratio of the final security level risk weight and security level pro forma market capitalization weight in the MSCI Parent Index.

2.4 DETERMINATION OF FINAL SECURITY LEVEL RISK WEIGHTS IN MSCI COUNTRY / REGIONAL INDEXES

The final security level risk weights in the respective MSCI Country / Regional Indexes is determined by applying the security level constraint factor derived in section 2.3 on the corresponding market cap weights in the MSCI Country / Regional indexes and renormalizing them accordingly.

3 MAINTAINING MSCI RISK WEIGHTED INDEXES

3.1 SEMI-ANNUAL INDEX REVIEWS

The MSCI Risk Weighted Indexes are rebalanced on a semi-annual basis, usually as of the close of the last business day of May and November, coinciding with the May and November Semi-Annual Index Review of the MSCI Global Investable Market Indexes. The pro forma MSCI Risk Weighted Indexes are announced nine business days before the effective date.

3.2 ONGOING EVENT RELATED CHANGES

The general treatment of corporate events in the MSCI Risk Weighted Indexes aims to minimize turnover outside of Index Reviews. The methodology aims to appropriately represent an investor's participation in an event based on relevant deal terms and pre-event weighting of the index constituents that are involved. Further, changes in index market capitalization that occur as a result of corporate event implementation will be offset by a corresponding change in the Variable Weighting Factor (VWF) of the constituent.

Additionally, if the frequency of Index Reviews in the Parent Index is greater than the frequency of Index Reviews in the MSCI Risk Weighted Index, the changes made to the Parent Index during intermediate Index Reviews will be neutralized in the MSCI Risk Weighted Index.

The following section briefly describes the treatment of common corporate events within the MSCI Risk Weighted Indexes.

No new securities will be added (except where noted below) to the Index between Index Reviews. Parent Index deletions will be reflected simultaneously.

EVENT TYPE

EVENT DETAILS

New additions to the Parent Index

A new security added to the parent index (such as IPO and other early inclusions) will be added to the index at an estimated full market capitalization adjustment factor on the date of security inclusion.

Spin-Offs

All securities created as a result of the spin-off of an existing Index constituent will be added to the Index at the time of event implementation. Reevaluation for

continued inclusion in the Index will occur at the subsequent Index Review.

Merger/Acquisition

For Mergers and Acquisitions, the acquirer's post event weight will account for the proportionate amount of shares involved in deal consideration, while cash proceeds will be invested across the Index.

If an existing Index constituent is acquired by a non-Index constituent, the existing constituent will be deleted from the Index and the acquiring non-constituent will not be added to the Index.

Changes in Security Characteristics

A security will continue to be an Index constituent if there are changes in characteristics (country, sector, size segment, etc.) Reevaluation for continued inclusion in the Index will occur at the subsequent Index Review.

Further detail and illustration regarding specific treatment of corporate events relevant to this Index can be found in the MSCI Corporate Events Methodology book under the sections detailing the treatment of events in Capped Weighted and Non-Market Capitalization Weighted indexes.

The MSCI Corporate Events methodology book is available at:
<https://www.msci.com/index-methodology>

APPENDIX I: REGIONAL INDEXES

MSCI defines the following six regional reference risk weighted indexes which are constructed from the respective regional parent indexes using the methodology as described in this document. Any other country/regional sub indexes are then derived from the reference indexes as described below:

	MSCI Regional Risk Weighted Index	MSCI Parent index	Derived Indexes
1	MSCI AC Asia Pacific IMI Risk Weighted Index	MSCI AC Asia Pacific IMI Index	Any Asian regional/country index
2	MSCI Europe & Middle East IMI Risk Weighted Index	MSCI Europe & Middle East IMI Index	Any Europe regional/country index
3	MSCI EM EMEA IMI Risk Weighted Index	MSCI EM EMEA IMI Index	Any EMEA regional/country index
4	MSCI AC Americas IMI Risk Weighted Index	MSCI AC Americas IMI Index	Developed and Emerging Americas (e.g. USA, Canada)
5	MSCI AC Asia Pacific & Europe & Middle East IMI Risk Weighted Index	MSCI AC Asia Pacific & Europe & Middle East IMI Index	Any index that combines countries included in 1 with countries included in 2 (e.g., EAFE)
6	MSCI ACWI IMI Risk Weighted Index	MSCI ACWI IMI	Any index that combines countries included in 1,2,3 and/or 4 (e.g., World, World ex USA)

APPENDIX II: MSCI RISK WEIGHTED TOP N INDEXES

The MSCI Risk Weighted indexes reweight all the constituents of an MSCI Parent index based on their historical volatility. MSCI can also create MSCI Risk Weighted Top N indexes that select only N number of securities from the MSCI Parent index with the lowest historical volatility and apply risk weighting on these securities, where N is a parameter defining how many securities are selected for inclusion.

For the initial construction of such an index, all constituents of the MSCI Parent index are ranked based on their risk weight as defined in section 2.3 and the top N constituents based on those weights are selected for inclusion in the MSCI Risk Weighted Top N index. These N constituents are then weighted based on the risk weights to construct the MSCI Risk Weighted Top N Index.

The MSCI Risk Weighted Top N indexes are rebalanced on a semi-annual basis, coinciding with the Semi-Annual Index Reviews of the MSCI Risk Weighted Indexes (see section 3.1). At each Semi-Annual Index Review, the constituents of the MSCI Parent index are ranked based on their risk weight as defined in section 2.3 and N constituents are selected for inclusion in the MSCI Risk Weighted Top N index. In the selection process, a buffer B%, for example 20%, on the number of securities is used to reduce turnover in the MSCI Risk Weighted Top N Indexes. Securities are selected in the following order till N securities have been selected:

- First, all securities ranked from 1 to $[N \times (1 - B/100)]$
- Second, all current constituents of the MSCI Risk Weighted Top N index ranked from $[N \times (1 - B/100) + 1]$ to $[N \times (1 + B/100)]$
- Third, remaining securities ranked from $[N \times (1 - B/100) + 1]$

The pro forma MSCI Risk Weighted Top N Indexes are announced nine business days before the effective date.

The event maintenance for the MSCI Risk Weighted Top N indexes is similar to the MSCI Risk Weighted indexes (see section 3.2), with the exception of IPOs and other early inclusions which are not included in the MSCI Risk Weighted Top N indexes at the time of their inclusion in the MSCI Parent Index and are only reviewed for inclusion at the following Semi-Annual Index Review.

The following sections have been modified since June 2014:

- Appendix II in the previous version of the methodology book describing the Corporate Events treatment has been deleted. The details on the Corporate Events treatment are now included in Section 3.2.

The following sections have been modified since June 2017:

Section 1: Introduction

- Updates to the description

ABOUT MSCI

For more than 40 years, MSCI's research-based indexes and analytics have helped the world's leading investors build and manage better portfolios. Clients rely on our offerings for deeper insights into the drivers of performance and risk in their portfolios, broad asset class coverage and innovative research.

Our line of products and services includes indexes, analytical models, data, real estate benchmarks and ESG research.

MSCI serves 98 of the top 100 largest money managers, according to the most recent P&I ranking.

The Information may not be modified, reverse-engineered, reproduced or disseminated in whole or in part without prior written permission from MSCI.
- The Information may not be used to create derivative works or to verify or correct other data or information. For example (but without limitation), the Information may not be used to create indexes, databases, risk models, analytics, software, or in connection with the issuing, offering, sponsoring, managing or marketing of any securities, portfolios, financial products or other investment vehicles utilizing or based on, linked to, tracking or otherwise derived from the Information or any other MSCI data, information, products or services.
- The user of the Information assumes the entire risk of any use it may make or permit to be made of the Information. NONE OF THE INFORMATION PROVIDERS MAKES ANY EXPRESS OR IMPLIED WARRANTIES OR REPRESENTATIONS WITH RESPECT TO THE INFORMATION (OR THE RESULTS TO BE OBTAINED BY THE USE THEREOF), AND TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, EACH INFORMATION PROVIDER EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES (INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF ORIGINALITY, ACCURACY, TIMELINESS, NON-INFRINGEMENT, COMPLETENESS, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE) WITH RESPECT TO ANY OF THE INFORMATION.
- Without limiting any of the foregoing and to the maximum extent permitted by applicable law, in no event shall any Information Provider have any liability regarding any of the Information for any direct, indirect, special, punitive, consequential (including lost profits) or any other damages even if notified of the possibility of such damages. The foregoing shall not exclude or limit any liability that may not by applicable law be excluded or limited, including without limitation (as applicable), any liability for death or personal injury to the extent that such injury results from the negligence or willful default of itself, its servants, agents or sub-contractors.
- Information containing any historical information, data or analysis should not be taken as an indication or guarantee of any future performance, analysis, forecast or prediction. Past performance does not guarantee future results.
- The Information should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. All Information is impersonal and not tailored to the needs of any person, entity or group of persons.
- None of the Information constitutes an offer to sell (or a solicitation of an offer to buy), any security, financial product or other investment vehicle or any trading strategy.
- It is not possible to invest directly in an index. Exposure to an asset class or trading strategy or other category represented by an index is only available through third party investable instruments (if any) based on that index. MSCI does not issue, sponsor, endorse, market, offer, review or otherwise express any opinion regarding any fund, ETF, derivative or other security, investment, financial product or trading strategy that is based on, linked to or seeks to provide an investment return related to the performance of any MSCI index (collectively, “Index Linked Investments”). MSCI makes no assurance that any Index Linked Investments will accurately track index performance or provide positive investment returns. MSCI Inc. is not an investment adviser or fiduciary and MSCI makes no representation regarding the advisability of investing in any Index Linked Investments.
- Index returns do not represent the results of actual trading of investable assets/securities. MSCI maintains and calculates indexes, but does not manage actual assets. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the index or Index Linked Investments. The imposition of these fees and charges would cause the performance of an Index Linked Investment to be different than the MSCI index performance.
- The Information may contain back tested data. Back-tested performance is not actual performance, but is hypothetical. There are frequently material differences between back tested performance results and actual results subsequently achieved by any investment strategy.
- Constituents of MSCI equity indexes are listed companies, which are included in or excluded from the indexes according to the application of the relevant index methodologies. Accordingly, constituents in MSCI equity indexes may include MSCI Inc., clients of MSCI or suppliers to MSCI. Inclusion of a security within an MSCI index is not a recommendation by MSCI to buy, sell, or hold such security, nor is it considered to be investment advice.
- Data and information produced by various affiliates of MSCI Inc., including MSCI ESG Research LLC and Barra LLC, may be used in calculating certain MSCI indexes. More information can be found in the relevant index methodologies on www.msci.com.
- MSCI receives compensation in connection with licensing its indexes to third parties. MSCI Inc.’s revenue includes fees based on assets in Index Linked Investments. Information can be found in MSCI Inc.’s company filings on the Investor Relations section of www.msci.com.
- MSCI ESG Research LLC is a Registered Investment Adviser under the Investment Advisers Act of 1940 and a subsidiary of MSCI Inc. Except with respect to any applicable products or services from MSCI ESG Research, neither MSCI nor any of its products or services recommends, endorses, approves or otherwise expresses any opinion regarding any issuer, securities, financial products or instruments or trading strategies and MSCI’s products or services are not intended to constitute investment advice or a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such. Issuers mentioned or included in any MSCI ESG Research materials may include MSCI Inc., clients of MSCI or suppliers to MSCI, and may also purchase research or other products or services from MSCI ESG Research. MSCI ESG Research materials, including materials utilized in any MSCI ESG Indexes or other products, have not been submitted to, nor received approval from, the United States Securities and Exchange Commission or any other regulatory body.
- Any use of or access to products, services or information of MSCI requires a license from MSCI. MSCI, Barra, RiskMetrics, IPD, FEA, InvestorForce, and other MSCI brands and product names are the trademarks, service marks, or registered trademarks of MSCI or its subsidiaries in the United States and other jurisdictions. The Global Industry Classification Standard (GICS) was developed by and is the exclusive property of MSCI and Standard & Poor’s. “Global Industry Classification Standard (GICS)” is a service mark of MSCI and Standard & Poor’s.
