## 1. Introduction

The MSCI Mexico ESG Select Focus Index (the ‘Index’) is designed to maximize its exposure to positive environmental, social and governance (ESG) factors while keeping the carbon-equivalent exposure to carbon dioxide (CO<sub>2</sub>) and other greenhouse gases (GHG) as well as the exposure to potential emissions risk of fossil fuel reserves similar to that of the MSCI Mexico Index (the ‘Parent Index’). The Index also aims to maintain risk and return characteristics similar to those of the Parent Index.

The Index is constructed by selecting constituents of the Parent Index through an optimization process that aims to maximize exposure to ESG factors for a target tracking error budget and maintaining a carbon-equivalent exposure to CO<sub>2</sub> and other GHG as well as the exposure to potential emissions risk of fossil fuel reserves comparable to that of the Parent Index under certain constraints.

The Index aims to be sector-diversified and targets companies with high ESG ratings in each sector. Considering the concentration limits defined by the National Commission for the Pension System (“Comision Nacional del Sistema de Ahorro para el Retiro” or CONSAR) in Mexico, MSCI applies constraints on the weights of the Index after the ESG optimization. These constraints are applied in line with the MSCI 35/65 Index Methodology<sup>1</sup>.

---

<sup>1</sup> The Index is governed by a set of methodology and policy documents (“Methodology Set”), including the present index methodology document. Please refer to Appendix IV for more details

## 2. Constructing the MSCI Mexico ESG Select Focus Index

The Index uses company ratings and research provided by MSCI Solutions<sup>2</sup> for the Index construction.

Constructing the MSCI Mexico ESG Select Focus Index involves the following steps:

- Defining the Security Level Carbon Exposure
- Defining the Business Exclusion Criteria
- Defining the Optimization Constraints
- Determining the Optimized Portfolio
- The steps mentioned above are defined in detail in the subsequent sections.

### 2.1 Defining the Security Level Carbon Exposure

The carbon exposure of a security is measured in terms of its greenhouse gas emissions and its potential carbon emissions from fossil fuel reserves. The MSCI Mexico ESG Select Focus Index uses MSCI Climate Change Metrics data from MSCI Solutions.

#### 2.1.1 Greenhouse Gas Emissions

MSCI Solutions collects company-specific direct (Scope 1) and indirect (Scope 2) greenhouse gas (GHG) emissions data from company public documents and/or the Carbon Disclosure Project. If a company does not report GHG emissions, then MSCI Solutions uses its proprietary methodology to estimate Scope 1 and Scope 2 GHG emissions. The data is updated on an annual basis. Since the current carbon emissions of a company are directly influenced by its current business activity, MSCI normalizes for size by dividing the annual carbon emissions of the company by the annual sales of the company.

For newly added companies to the Index which do not report emission data and where MSCI Solutions has not estimated the greenhouse gas emissions yet, MSCI uses the Average Emissions per dollar of issuer market capitalization for the companies in the same industry group, multiplied by the market capitalization of the company as the estimated emission for the company.

#### 2.1.2 Potential Carbon Emissions from Fossil Fuels

MSCI Solutions collects fossil fuel reserves data where relevant for companies which have reserves, typically in the Oil & Gas, Coal Mining and Electric Utilities industries<sup>3</sup>. Fossil fuel reserves can be used for several applications including energy or industrial (e.g. coking coal used for steel production). For the development of the MSCI Mexico ESG Select Focus Index, only fossil fuel reserves used for energy are taken into account. The data is updated on an annual basis and based on information disclosed by companies. Sources include company publications, other public records

---

See section 4 for further information regarding ESG and climate data used in the Indexes that MSCI Limited and MSCI Deutschland GmbH source from MSCI Solutions LLC, a separate subsidiary of MSCI Inc. MSCI Solutions is solely responsible for the creation, determination and management of such data as a provider to MSCI Limited and MSCI Deutschland GmbH. MSCI Limited and MSCI Deutschland GmbH are the benchmark administrators for the MSCI indexes.

For more information on MSCI Climate Change Metrics, please refer to <https://www.msci.com/index-carbonfootprint-metric>

and third-party data providers. For newly added companies to the Index where data is not available yet, MSCI uses zero fossil fuel reserves. The size of reserves of a company typically influences its market valuation, and hence MSCI normalizes for size by dividing the potential carbon emissions of the company by its market capitalization.

To convert reserves data to potential carbon emissions, MSCI Solutions applies a formula from the Potsdam Institute for Climate Impact Research<sup>4</sup>.

## 2.2 Defining the Business Exclusion Criteria

Companies that are involved in specific businesses which have high potential for negative social and/or environmental impact are ineligible for inclusion in the Index.

- Controversial Weapons
- Civilian Firearms
- Tobacco
- Thermal Coal
- Oil Sands

## 2.3 Defining the Optimization Constraints

### 2.3.1 ESG Optimization

The Optimization process aims to maximize the Index's exposure to ESG Scores and simultaneously ensuring that the carbon emissions intensity, weighted carbon emission intensity, and potential emissions are comparable to that of the MSCI Mexico Index for a tracking error budget of 150 basis points (1.5%).

ESG Scores are normalized and used in the optimization process.

Normalization of the ESG Scores is designed to allow the optimization process to assess each score in the context of the overall distribution of the ESG Scores.

### 2.3.2 Capping Optimization

The MSCI 35/65 Capped Indexes methodology as defined below is applied using a separate optimization process after the ESG Optimized Index construction step to obtain the Final Index.

- The weight of any single security will be constrained at 35%.
- The sum of the largest five securities will be constrained at 65%.
- A buffer of 5% of the value of each constraint is applied at each index review. As a result, at the point of constructing or rebalancing the MSCI 35/65 Capped Index, the weight of any

<sup>4</sup> Malte Meinshausen, Nicolai Meinshausen, William Hare, Sarah C. B. Raper, Katja Frieler, Reto Knutti, David J. Frame & Myles R. Allen. Greenhouse-gas emission Target for limiting global warming to 2 °C. *Nature* 458, 1158-1162 (30 April 2009) | doi: 10.1038/nature08017; Received 25 September 2008; Accepted 25 March 2009. Supplementary Information, p. 7.

single security cannot exceed 33.25% and the sum of the largest five securities cannot exceed 61.75%

In general, the 35/65 Capped Index follows the event maintenance of the MSCI 35/65 Capped Indexes Methodology.

Please refer to section 4.6 of the MSCI Capped Indexes methodology for additional details on the MSCI 35/65 Capped Indexes Methodology at <https://www.msci.com/index-methodology>

Please refer to Appendix 2 for the optimization constraints.

## 2.4 Determining the Optimized Portfolio

- The Index is constructed using MSCI’s Barra® Open Optimizer in combination with the relevant Barra Equity Model<sup>5</sup>. The optimization uses a universe of eligible securities and the specified optimization objective and constraints to determine the constituents of the MSCI Mexico ESG Select Focus Index.

## 2.5 Treatment of Unrated Companies

Companies not assessed by MSCI Solutions on data for any of the following MSCI sustainability and climate products are not eligible for inclusion in the Indexes.

- MSCI ESG Ratings

For the treatment of missing emissions data as used in the calculation of target metrics for the optimization, please refer to Appendix II

---

<sup>5</sup> Please refer to Appendix III for the detailed information on model usage

### 3. Maintaining the MSCI Mexico ESG Select Focus Index

#### 3.1 Quarterly Index Reviews

The Index is rebalanced on a quarterly basis to coincide with the regular Index Reviews (Semi-Annual Index Reviews in May and November and Quarterly Index Reviews in February and August) of the MSCI Global Investable Market Indexes. Changes are implemented at the end of February, May, August and November. The pro forma indexes are in general announced nine business days before the effective date.

At each Index Review, the optimization process outlined in Section 3 is implemented.

In general, MSCI uses MSCI Solutions data (including MSCI ESG Ratings, MSCI Business Involvement Screening Research, and MSCI Climate Change Metrics) as of the end of the month preceding the Index Reviews<sup>6</sup>. For some securities, such data may not be published by MSCI Solutions by the end of the month preceding the Index Review. For such securities, MSCI will use ESG data published after the end of month, when available.

#### 3.2 Rebalancing due to non-compliance

The 35/65 Index is also rebalanced on an “as needed” basis. This means that the 35/65 Index is rebalanced at the end of any day on which the constraints as specified in Section 3.3 (without the buffer) are breached. The breach of the constraints can be, for example, triggered by the market performance of one constituent.

The rebalancing will take place as of the close of the day when the Index breaches the constraints, based on closing prices, such that the MSCI 35/65 Index will always be within the constraints before the opening of the following trading day.

Any rebalancing driven due to non-compliance, does not trigger the ESG Optimization (as described in section 3.3.1), and only triggers a capping optimization (as described in section 3.3.2).

#### 3.3 Ongoing event-related maintenance

The general treatment of corporate events in the MSCI Mexico ESG Select Focus Index aims to minimize turnover outside of Index Reviews. The methodology aims to appropriately represent an investor’s participation in an event based on relevant deal terms and pre-event weighting of the Index constituents that are involved. Further, changes in index market capitalization that occur as a result of corporate event implementation will be offset by a corresponding change in the Variable Weighting Factor (VWF) of the constituent.

Additionally, if the frequency of Index Reviews in the Parent Index is greater than the frequency of Index Reviews in the MSCI Mexico ESG Select Focus Index, the changes made to the Parent Index during intermediate Index Reviews will be neutralized in the MSCI Mexico ESG Select Focus Index.

The following section briefly describes the treatment of common corporate events for the MSCI Mexico ESG Select Focus Index.

<sup>6</sup> Emissions data, whenever available, will be taken as of the same calendar year as sales data. Depending on availability, such data may be based on values reported at least two years prior.

No new securities will be added (except where noted below) to the Index between Index Reviews. Parent Index deletions will be reflected simultaneously.

**EVENT TYPE**

**EVENT DETAILS**

**New additions to the Parent Index**

A new security added to the Parent Index (such as IPO and other early inclusions) will not be added to the index.

**Spin-Offs**

All securities created as a result of the spin-off of an existing Index constituent will be added to the Index at the time of event implementation. Reevaluation for continued inclusion in the Index will occur at the subsequent Index Review.

**Merger/Acquisition**

For Mergers and Acquisitions, the acquirer’s post event weight will account for the proportionate amount of shares involved in deal consideration, while cash proceeds will be invested across the index.

If an existing Index constituent is acquired by a non-Index constituent, the existing constituent will be deleted from the Index and the acquiring non-constituent will not be added to the Index.

**Changes in Security Characteristics**

A security will continue to be an Index constituent if there are changes in characteristics (country, sector, size segment, etc.) Reevaluation for continued inclusion in the Index will occur at the subsequent Index Review.

Further detail and illustration regarding specific treatment of corporate events relevant to this Index can be found in the MSCI Corporate Events Methodology book.

The MSCI Corporate Events methodology book is available at:

<https://www.msci.com/index/methodology/latest/CE>

## 4. MSCI Solutions

The Indexes are products of MSCI Inc. that utilize information such as company ratings and research produced and provided by MSCI Solutions LLC (MSCI Solutions), a subsidiary of MSCI Inc. In particular, the Indexes use the following MSCI sustainability and climate products: MSCI Controversies, MSCI Business Involvement Screening Research and MSCI Climate Change Metrics. MSCI Indexes are administered by MSCI Limited and MSCI Deutschland GmbH.

### 4.1 MSCI ESG Ratings

MSCI ESG Ratings aim to measure entities' management of environmental, social and governance risks and opportunities. MSCI ESG Ratings use a weighted average key issue calculation that is normalized by industry to arrive at an industry-adjusted ESG score (0-10), which is then translated to a seven-point scale from 'AAA' to 'CCC', indicating how an entity manages relevant key issues relative to industry peers

The MSCI ESG Ratings methodology can be found at: <https://www.msci.com/legal/disclosures/esg-disclosures>.

### 4.2 MSCI Business Involvement Screening Research

MSCI Business Involvement Screening Research (BISR) aims to enable institutional investors to manage environmental, social and governance (ESG) standards and restrictions reliably and efficiently.

The MSCI Business Involvement Screening Research methodology can be found at: <https://www.msci.com/legal/disclosures/esg-disclosures>.

### 4.3 MSCI Climate Change Metrics

MSCI Climate Change Metrics provide climate data & tools to support institutional investors seeking to integrate climate risk & opportunities into their investment strategy and processes. This includes investors seeking to achieve a range of objectives, including measuring and reporting on climate risk exposure, implementing low carbon and fossil fuel-free strategies, alignment with temperature pathways and factoring climate change research into their risk management processes, in particular through climate scenario analysis for both transition and physical risks.

The dataset spans across the four dimensions of a climate strategy: transition risks, green opportunities, physical risks and 1.5° alignment.

For more details on MSCI Climate Change Metrics, please refer to <https://www.msci.com/climate-change-solutions>.

## Appendix I: Business Exclusion Criteria

- **Controversial Weapons**
  - All companies with any tie to Controversial Weapons (cluster munitions, landmines, depleted uranium weapons, biological/chemical weapons, blinding lasers, nondetectable fragments and incendiary weapons), as defined by the methodology of the MSCI Global Ex-Controversial Weapons Indexes available at <https://www.msci.com/index-methodology>.
- **Civilian Firearms**
  - All companies classified as “Producer” of firearms and small arms ammunitions for civilian markets. It does not include companies that cater to the military, government, and law enforcement markets.
- **Tobacco**
  - All companies classified as a “Producer”.
- **Thermal Coal**
  - All companies deriving 5% or more revenue (either reported or estimated) from the mining of thermal coal (including lignite, bituminous, anthracite and steam coal) and its sale to external parties. It does not cover: revenue from metallurgical coal; coal mined for internal power generation (e.g. in the case of vertically integrated power producers); intra-company sales of mined thermal coal; and revenue from coal trading.
  - All companies deriving 5% or more revenue (either reported or estimated) from the thermal coal-based power generation.
- **Oil Sands**
  - All companies deriving 5% or more revenue from oil sands extraction, which own oil sands reserves and disclose evidence of deriving revenue from oil sands extraction. Companies that derive revenue from non-extraction activities (e.g. exploration, surveying, processing, refining) or intra-company sales are not excluded. Additionally, companies that own oil sands reserves with no associated revenue are also not excluded.

## Appendix II: Optimization Constraints

### ESG optimization constraints

At each Quarterly Index Review, the following optimization constraints with the ex-ante tracking error target of 150 basis points (1.5%) are used to ensure replicability and investability for the ESG Optimization.

### Screened Parent

The Screened Parent is constructed by excluding securities from the Parent Index based on the exclusion criteria as defined in Section 3.2. The security weights are then normalized to 100%

### Optimization Constraints

No.	Parameter	Values
1	Minimum Constituent Weight	Minimum constituent weight in the Screened Parent
2 <sup>^</sup>	Asset Lower Bound	Maximum (Minimum constituent weight in the Screened Parent, 0.5 * Security Weight in the Screened Parent)
3 <sup>^</sup>	Asset Upper Bound	Minimum (3 * Security Weight in the Screened Parent, Security Weight in the Screened Parent +2%)
4 <sup>^</sup>	Active Sector Weights	+/-10%
5 <sup>^</sup>	Carbon Emission Intensity relative to the Parent Index	Target Carbon Emission Intensity of the Parent Index or lower
6 <sup>^</sup>	Potential Emissions per dollar of market capitalization relative to the Parent Index	Target Potential Emissions per dollar of market capitalization of the Parent Index or Lower
7 <sup>^</sup>	Weighted Average Carbon Emission Intensity relative to the Parent Index	Target Weighted Average Carbon Emission Intensity of the Parent Index or lower
8 <sup>^</sup>	One Way Turnover during May and November Index Review	10%
9 <sup>^</sup>	One Way Turnover during Feb an Aug Index Review	5%
10	Specific Risk Aversion	0.075
11	Common Factor Risk Aversion	0.0075

<sup>^</sup> The Optimization Constraints are applied relative to the Parent Index.

**Infeasible Solution** - During the Quarterly Index Reviews, in the event that there is no optimal solution that satisfies all the optimization constraints, the following constraints will be relaxed one by one, until an optimal solution is found:

1. The turnover constraint will be relaxed in steps of 1% up to a maximum value of 30%, until a feasible solution is found.
2. If a feasible solution is not found at turnover of 30%, the turnover is maintained at the maximum value of 30%.
3. The predicted tracking error will be relaxed in steps of 0.1% up to a maximum of 5 times of the original predicted tracking error until an optimal solution is found.

In the event that no feasible solution is found after the above constraints have been relaxed, the Index will not be rebalanced for that index review

The Carbon Emission Intensity and the Potential Emissions per dollar of market capitalization of the Index are calculated using the formulae defined as –

**Index Carbon Emissions -**

**Greenhouse Gas (GHG) Emissions**

MSCI Solutions collects company-specific direct (Scope 1) and indirect (Scope 2) greenhouse gas emissions (GHG) data from company public documents and/or the Carbon Disclosure Project. If a company does not report GHG emissions, then MSCI Solutions estimates Scope 1 and Scope 2 GHG emissions.

**Calculation of GHG Intensity**

First, index level carbon emissions are calculated using the Scope 1+2 carbon emissions of a company.

Parent Index Carbon Emissions –

$$\sum_i \left( \frac{(\text{Float Market Capitalization} * \text{Absolute Emissions})}{\text{Issuer Market Capitalization}} \right)$$

Derived Index Carbon Emissions –

$$\sum_i \left( \frac{(\text{Derived Market Capitalization} * \text{Absolute Emission})}{\text{Issuer Market Capitalization}} \right)$$

Parent Index Carbon Emission Intensity is defined as Parent Index Carbon Emissions, as defined above, divided by Parent Index Sales –

$$\sum_i \left( \frac{(\text{Float Market Capitalization} * \text{Absolute Emissions})}{\text{Issuer Market Capitalization}} \right) / \sum_i \left( \frac{(\text{Float Index Market Capitalization} * \text{Sales})}{\text{Issuer Market Capitalization}} \right)$$

Derived Index Carbon Emissions Intensity is defined as Derived Index Carbon Emissions, as defined above, divided by Derived Index Sales –

$$\sum_i \left( \frac{(\text{Derived Market Capitalization} * \text{Absolute Emissions})}{\text{Issuer Market Capitalization}} \right) / \sum_i \left( \frac{(\text{Derived Index Market Capitalization} * \text{Sales})}{\text{Issuer Market Capitalization}} \right)$$

Derived Index Carbon Emissions Intensity is defined as Derived Index Carbon Emissions, as defined above, divided by Derived Index Sales –

$$\sum_i \left( \frac{(\text{Derived Market Capitalization} * \text{Absolute Emissions})}{\text{Issuer Market Capitalization}} \right) / \sum_i \left( \frac{(\text{Derived Index Market Capitalization} * \text{Sales})}{\text{Issuer Market Capitalization}} \right)$$

**Estimation of missing Carbon Intensity data**

For a security, if Scope 1+2 carbon emissions are not available but Sales are available, MSCI estimates emissions by multiplying the Sales of the security with the average Sales intensity (i.e., Scope 1+2 emissions / Sales) of all constituents of MSCI ACWI in the same GICS Industry Group that have both Scope 1+2 Emissions and Sales available.

If Sales are not available for a security but Scope 1+2 emissions are available, MSCI estimates Sales by dividing the security’s Scope 1+2 emissions by the average Sales intensity (i.e., Scope 1+2 emissions / Sales) of all constituents of MSCI ACWI in the same GICS Industry group that have both Scope 1+2 emissions and Sales available.

In case both Scope 1+2 emissions and Sales are not available for a security:

- The Sales are estimated by dividing the security’s Issuer market capitalization by the average Issuer market capitalization to Sales ratio of all constituents of MSCI ACWI in the same GICS Industry Group that have Sales available.
- The emissions are estimated by multiplying the estimated Sales of the security by the average Sales intensity (i.e., Scope 1+2 emissions / Sales) of all constituents of MSCI ACWI in the same GICS Industry group that have both Scope 1+2 emissions and Sales available.

In case there are no securities in the GICS Industry Group with relevant data available for the estimation, then the estimation is applied at the level of the corresponding GICS Sector.

## Index Potential Carbon Emissions from Fossil Fuels -

Parent Index Potential Carbon Emissions from Fossil Fuels–

$$\sum_i \left( \frac{(\text{Float Market Capitalization} * \text{Absolute Potential Emissions})}{\text{Issuer Market Capitalization}} \right)$$

Derived Index Potential Carbon Emissions from Fossil Fuels–

$$\sum_i \left( \frac{(\text{Derived Index Market Capitalization} * \text{Absolute Potential Emissions})}{\text{Issuer Market Capitalization}} \right)$$

The Weighted Average Carbon Emission Intensity of the Index is achieved by calculating the Carbon Emission Intensity for each security in the Index and calculating the weighted average by index weight.

At the security level, the Carbon Emission Intensity is defined as –

$$\text{Security Carbon Emission Intensity} = \frac{\text{Carbon Emissions}}{\text{Sales}}$$

Where Carbon Emissions is calculated as defined in the Section 3.1.1

### 35/65 capping optimization constraints

No.	Parameter	Values
1	Buffer for Maximum Security Weight and Sum of Top 5 Securities Weight at Index Review	5%
3	Maximum Security Weight as a Multiple of its weight in the Parent Index	3

**Infeasible Capping Solution** - During the Quarterly Index Reviews, in the event that there is no optimal solution that satisfies all the optimization constraints, the following constraints will be relaxed one by one, until an optimal solution is found:

- Relax the maximum security weight multiple in steps of 1 up to a maximum value of 5.
- Reduce the Top 5 security weight constraint buffer in steps of 2.5% up to a buffer value of 0.
- Reduce the Top security weight constraint buffer in steps of 2.5% up to a buffer value of 0.

In the event that no optimal solution is found after the above constraints have been relaxed, after a total of 50 iterations, the Index will not be rebalanced for that index review.

## **Appendix III: New release of Barra® Equity Model or Barra® Optimizer**

The methodology presently uses MSCI Barra Global Equity Model for Long-Term Investors (“GEMTL”) for the optimization. A new release of the relevant Barra Equity Model or Barra Optimizer may replace the former version within a suitable timeframe.

## Appendix IV: Methodology Set

The Indexes are governed by a set of methodology and policy documents (“Methodology Set”), including the present index methodology document as mentioned below:

- Description of methodology set – <https://www.msci.com/index/methodology/latest/ReadMe>
- MSCI Corporate Events Methodology – <https://www.msci.com/index/methodology/latest/CE>
- MSCI Fundamental Data Methodology – <https://www.msci.com/index/methodology/latest/FundData>
- MSCI Index Calculation Methodology – <https://www.msci.com/index/methodology/latest/IndexCalc>
- MSCI Index Glossary of Terms – <https://www.msci.com/index/methodology/latest/IndexGlossary>
- MSCI Index Policies – <https://www.msci.com/index/methodology/latest/IndexPolicy>
- MSCI Global Industry Classification Standard (GICS) Methodology – <https://www.msci.com/index/methodology/latest/GICS>
- MSCI Global Investable Market Indexes Methodology – <https://www.msci.com/index/methodology/latest/GIMI>
- MSCI Global ex Controversial Weapons Indexes Methodology – <https://www.msci.com/index/methodology/latest/XCW>
- ESG Factors In Methodology\*

The Methodology Set for the Indexes can also be accessed from MSCI’s webpage <https://www.msci.com/index-methodology> in the section ‘Search Methodology by Index Name or Index Code’.

\* ‘ESG Factors in Methodology’ contains the list of environmental, social, and governance factors considered, and how they are applied in the methodology (e.g., selection, weighting or exclusion). It can be accessed in the Methodology Set as described above.

## Appendix V: Changes to this Document

### The following sections have been modified as of December 2022:

- Appendix II: Added formulae used for Carbon Emissions Intensity and Potential Emissions per dollar of market capitalization calculation.

### The following sections have been modified as of February 2024:

#### Section 2.5: Treatment of Unrated Companies

- New section detailing the treatment of companies with ratings and research not available from MSCI Solutions

#### Section 4: MSCI Solutions

- Moved that section after the Section 3 (Maintaining the MSCI Mexico ESG Select Focus Index).

#### Appendix II: Optimization Constraints

- Steps clarification for Infeasible Solution
- Addition of GHG Intensity introduction with treatment of missing data
- Addition of Potential Emissions intensity introduction

#### Appendix IV: Methodology Set

- Added details on the Methodology Set for the Index

### The following section has been modified as of May 2024

#### Section 3.3: Ongoing Event-Related Maintenance

- Clarification of the Spin-Off Treatment

### The following section has been modified as of November 2024

#### Appendix II: Optimization Constraints

- Updated language for Infeasible Solution

### About MSCI

MSCI is a leading provider of critical decision support tools and services for the global investment community. With over 50 years of expertise in research, data and technology, we power better investment decisions by enabling clients to understand and analyze key drivers of risk and return and confidently build more effective portfolios. We create industry-leading research-enhanced solutions that clients use to gain insight into and improve transparency across the investment process.

To learn more, please visit [www.msci.com](https://www.msci.com).

The process for submitting a formal index complaint can be found on the index regulation page of MSCI's website at: <https://www.msci.com/index-regulation>.

## Notice and disclaimer

The data, data feeds, databases, reports, text, graphs, charts, images, videos, recordings, models, metrics, analytics, indexes, ratings, scores, cases, estimates, assessments, software, websites, products, services and other information and materials contained herein or delivered in connection with this notice (collectively, the "Information") are copyrighted, trade secrets (when not publicly available), trademarks and proprietary property of MSCI Inc. or its subsidiaries (collectively, "MSCI"), MSCI's licensors, direct or indirect suppliers and authorized sources, and/or any third party contributing to the Information (collectively, with MSCI, the "Information Providers"). All rights in the Information are reserved by MSCI and its Information Providers and user(s) shall not, nor assist others to, challenge or assert any rights in the Information.

Unless you contact MSCI and receive its prior written permission, you must NOT use the Information, directly or indirectly, in whole or in part (i) for commercial purposes, (ii) in a manner that competes with MSCI or impacts its ability to commercialize the Information or its services, (iii) to provide a service to a third party, (iv) to permit a third party to directly or indirectly access, use or resell the Information, (v) to redistribute or resell the Information in any form, (vi) to include the Information in any materials for public dissemination such as fund factsheets, market presentations, prospectuses, and investor information documents (e.g. KIID or KIDs), (vii) to create or as a component of any financial products, whether listed or traded over the counter or on a private placement basis or otherwise, (viii) to create any indexes, ratings or other data products, including in derivative works combined with other indexes or data or as a policy, product or performance benchmarks for active, passive or other financial products, (ix) to populate a database, or (x) to train, use as an input to, or otherwise in connection with any artificial intelligence, machine learning, large language models or similar technologies except as licensed and expressly authorized under MSCI's AI Contracting Supplement at <https://www.msci.com/legal/supplemental-terms-for-client-use-of-artificial-intelligence>.

The intellectual property rights of MSCI and its Information Providers may not be misappropriated or used in a competitive manner through the use of third-party data or financial products linked to the Information, including by using an MSCI index-linked future or option in a competing third-party index to provide an exposure to the underlying MSCI index or by using an MSCI index-linked ETF to create a financial product that provides an exposure to the underlying MSCI index without obtaining a license from MSCI.

The user or recipient of the Information assumes the entire risk of any use it may make, permit or cause to be made of the Information. NONE OF THE INFORMATION PROVIDERS MAKES ANY EXPRESS OR IMPLIED WARRANTIES OR REPRESENTATIONS WITH RESPECT TO THE INFORMATION (OR THE RESULTS TO BE OBTAINED BY THE USE THEREOF), AND TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, EACH INFORMATION PROVIDER EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES (INCLUDING ANY IMPLIED WARRANTIES OF ORIGINALITY, ACCURACY, TIMELINESS, SUITABILITY, NON-INFRINGEMENT, COMPLETENESS, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE) WITH RESPECT TO ANY OF THE INFORMATION. Without limiting any of the foregoing and to the maximum extent permitted by applicable law, in no event shall MSCI or any other Information Provider have any liability arising out of or relating to any of the Information, including for any direct, indirect, special, punitive, consequential (including lost profits) or any other damages, even if notified of the possibility of such damages. The foregoing shall not exclude or limit any liability that may not be by applicable law be excluded or limited.

The Information, including index construction, ratings, historical data, or analysis, is not a prediction or guarantee of future performance, and must not be relied upon as such. Past performance is not indicative of future results. The Information may contain back tested data. Back-tested performance based on back-tested data is not actual performance but is hypothetical. There are frequently material differences between back tested performance results and actual results subsequently achieved by any investment strategy. The Information may include "Signals," defined as quantitative attributes or the product of methods or formulas that describe or are derived from calculations using historical data. Signals are inherently backward-looking because of their use of historical data, and they are inherently inaccurate, not intended to predict the future and must not be relied upon as such. The relevance, correlations and accuracy of Signals frequently change materially over time.

The Information may include data relating to indicative prices, evaluated pricing or other information based on estimates or evaluations (collectively, "Evaluations") that are not current and do not reflect real-time traded prices. No evaluation method, including those used by the Information Providers, may consistently generate evaluations or estimates that correspond to actual "traded" prices of any relevant securities or other assets. Evaluations are subject to change at any time without notice and without any duty to update or inform you, may not reflect prices at which actual transactions or collateral calls may occur or have occurred. The market price of securities, financial instruments, and other assets can be determined only if and when executed in the market. There may be no, or may not have been any, secondary trading market for the relevant securities, financial instruments or other assets. Private capital, equity, credit and other assets and their prices may be assessed infrequently, may not be priced on a secondary market, and shall not be relied upon as an explicit or implicit valuation of a particular instrument. Any reliance on fair value estimates and non-market inputs introduces potential biases and subjectivity. Internal Rate of Return metrics are not fully representative without full disclosure of fund cash flows, assumptions, and time horizons.

The Information does not constitute, and must not be relied upon as, investment advice, credit ratings, or proxy advisory or voting services. None of the Information Providers, their products or services, are fiduciaries or make any recommendation, endorsement, or approval of any investment decision or asset allocation. Likewise, the Information does not represent an offer to sell, a solicitation to buy, or an endorsement of any security, financial product, instrument, investment vehicle, or trading strategy, whether or not linked to or in any way based on any MSCI index, rating, subcomponent, or other Information (collectively, "Linked Investments"). The Information should not be relied on and is not a substitute for the skill, judgment and experience of any user when making investment and other business decisions. MSCI is not responsible for any user's compliance with applicable laws and regulations. All Information is impersonal, not tailored to the needs of any person, entity or group of persons, not objectively verifiable in every respect, and may not be based on information that is important to any user.

It is not possible to invest in an index. Exposure to an asset class or trading strategy or other category represented by an index is only available through third party investable instruments (if any) based on that index. MSCI makes no assurance that any Linked Investments will accurately track index performance or provide positive investment returns. Index returns do not represent results of actual trading of investible assets/securities. MSCI maintains and calculates indexes but does not manage assets. The calculation of indexes and index returns may deviate from the stated methodology. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase securities underlying the index or Linked Investments. The imposition of these fees and charges would cause the performance of a Linked Investment to be different than the MSCI index performance.

Information provided by MSCI Solutions LLC and certain related entities ("MSCI Solutions"), including materials utilized in MSCI sustainability and climate products, have not been submitted to, nor received approval from any regulatory body. MSCI sustainability and climate offerings, research and data are produced by, and ratings are solely the opinion of MSCI Solutions. MSCI India Domestic ESG Ratings are produced by MSCI ESG Ratings and Research Private Limited and offered domestically in India. Other MSCI products and services may utilize information from MSCI Solutions, Barra LLC or other affiliates. More information can be found in the relevant methodologies on [www.msci.com](http://www.msci.com). MSCI Indexes are administered by MSCI Limited (UK) and MSCI Deutschland GmbH. No regulated use of any MSCI private real assets indexes in any jurisdiction is permitted without MSCI's express written authorization. The process for applying for MSCI's express written authorization can be found at: <https://www.msci.com/index-regulation>.

MSCI receives compensation in connection with licensing its indexes and other Information to third parties. MSCI Inc.'s revenue includes fees based on assets in Linked Investments. Information can be found in MSCI Inc.'s company filings on the Investor Relations section of [msci.com](http://msci.com). Issuers mentioned in MSCI Solutions materials or their affiliates may purchase research or other products or services from one or more MSCI affiliates, manage financial products such as mutual funds or ETFs rated by MSCI Solutions or its affiliates or are based on MSCI Indexes. Constituents of MSCI equity indexes are listed companies, which are included in or excluded from the indexes according to the application of the relevant index methodologies. Constituents in MSCI Inc. equity indexes may include MSCI Inc., clients of MSCI or suppliers to MSCI. MSCI Solutions has taken steps to mitigate potential conflicts of interest and safeguard the integrity and independence of its research and ratings.

**MIFID2/MIFIR notice:** MSCI Solutions does not distribute or act as an intermediary for financial instruments or structured deposits, nor does it deal on its own account, provide execution services for others or manage client accounts. No MSCI product or service supports, promotes or is intended to support or promote any such activity. MSCI Solutions is an independent provider of sustainability and climate data. All use of indicative prices for carbon credits must comply with any rules specified by MSCI. All transactions in carbon credits must be traded "over-the-counter" (i.e. not on a regulated market, trading venue or platform that performs a similar function to a trading venue) and result in physical delivery of the carbon credits.

You may not remove, alter, or obscure any attribution to MSCI or notices or disclaimers that apply to the Information. MSCI, Barra, RiskMetrics, and other MSCI brands and product names are the trademarks, service marks, or registered trademarks of MSCI or its subsidiaries in the United States and other jurisdictions. The Global Industry Classification Standard (GICS) was developed by and is the exclusive property of MSCI and S&P Dow Jones Indices. "Global Industry Classification Standard (GICS)" is a service mark of MSCI and S&P Dow Jones Indices. Terms such as including, includes, for example, such as and similar terms used herein are without limitation.

MSCI and its Information Providers may use automated technologies and artificial intelligence to help generate content and output incorporated in the Information.
